

## SOFTWARE SECURITY DECLARATION FOR U-NII DEVICES

## Product: Camera, FCC ID: CNFSPBL1, KDB 594280 D02 U-NII Device Security v01r03

F	oduct: Camera, FCC ID: CNFSPBL1, KDB 594280 D02 U	-INIT DEVICE SECURITY VOLTOS
	<ol> <li>Describe how any software/firmware updates for elements than can affect the device's RF parameters will be obtained downloaded, validated and installed. For software that is accessed through manufacturer's website or device's management system, describe the different levels of securi as appropriate.</li> <li>Describe the RF parameters that are modified by any</li> </ol>	d, Any software/firmware updates can not affect RF parameters. ity
	software/firmware without any hardware changes. Are the parameters in some way limited such that any other software/firmware changes will not allow the device to exceed the authorized RF characteristics?	The RF parameters/limits are stored in a separate part of the non-volatile storage and not updated or changed with the firmware updates.
	<ol> <li>Describe in detail the authentication protocols that are in place to ensure that the source of the RF-related software/firmware is valid. Describe in detail how the RF- related software is protected against modification.</li> </ol>	There are currently no authentication protocols in place to check for a valid firmware outside of product registration and serial number.
General Description	4. Describe in detail any encryption methods used to support use of legitimate RF-related software/firmware.	Firmware are not encrypted. RF related parameters/limits are stored in a sperate part of non-volatile storage and are not part of the firmware.
	5. For a device that can be configured as a master and client (with active or passive scanning), explain how the device ensures compliance for each mode? In particular if the dev acts as master in some band of operation and client in another; how is compliance ensured in each band of operation?	When this device is operating as client in 5 GHz operation, it will operate in "world" mode in which it will use passive scanning to conform to region and requirements and bands allowed. Channels for client mode: 5180-5240MHz, 5260-5320MHz, 5500- 5700MHz, 5745 - 5825MHz ice When this device is operating as master in 5GHz bands, it is set at factory to support only UNII-1 and UNII-3 channels.
		Channels for master mode: UNII-1: 5180MHz-5240 MHz (CH 42) UNII-3: 5745-5825 MHz (CH 155) RF parameters are not affect when this device is either master or client mode.
	<ol> <li>Explain if any third parties have the capability to operate a U.Ssold device on any other regulatory domain, frequenci or in any manner that may allow the device to operate in violation of the device's authorization if activated in the U.S.</li> </ol>	ies, change radio parameters or country
Third-Party Access Control	2. Describe, if the device permits third-party software or firmware installation, what mechanisms are provided by th manufacturer to permit integration of such functions while ensuring that the RF parameters of the device cannot be operated outside its authorization for operation in the U.S. the description include what controls and/or agreements a in place with providers of third-party functionality to ensur the devices' underlying RF parameters are unchanged and how the manufacturer verifies the functionality.	<ul> <li>This device does not permit third-party software or firmware installation and only</li> <li>In the permitted person can update the software or firmware via special</li> </ul>

USER CONFIGURATION GUIDE         • Module grantee natures that host manufactures fully comply with these software software loaded in the host, describe how the drivers are controlled and managed such that the modular transmitter RF parameters are not modified outside the grant of authorization.         N/A — Transmitter is integrated into the dvice and is not a module.           1.         Describe the user configurations permitted for professional installers, system integrators or end- users, describe the differences.         User can select the working band of the WiF module? 2.4G or Soltz.           0.         Mat parameters are viewable and configurable by different parties?         User can select the working band of the wiFi module? 2.4G or Soltz.           10.         Na the parameters are accessible or modifiable to the installers will not enter parameters that exceed those authorized?         N/A This device is not subject to professional installation.           11.         Are the parameters in some way limited, so that the installers will not enter parameters that exceed those authorized?         N/A This device is not subject to professional installation.           11.         Are the parameters in some way limited, so that the installers will not enter parameters that exceed those authorized?         N/A This device is not subject to professional installers.           11.         Are the parameters is nome way limited, so that the installers will not enter parameters that exceed those authorized?         N/A This device is programmed in flash memory and not accessible to the end- ueer?           12.         Are the adia be configured as a master in mode? If yes an			[]
1. Describe the user configurations permitted from professional installers, system integrators or end-users, describe the differences.       User can select the working band of the differences.         a) What parameters are accessible or modifiable by different parties?       User can select the working band of the professional installer or system integrators?         i) Are the parameters in some way limited, so that the installers will not enter parameters that exceed thos authorized?       N/A-This device is not subject to professional installation.         ii) What controls exist that the user cannot operate the device outside its authorization in the U.S.?       N/A-This device is not subject to professional installation.         ii) What controls exist that the user cannot operate the installers will not enter parameters that exceed thos memory and not accessible to the end-user?       N/A-This device is not subject to professional installation.         i) Are the parameters in some way limited, so that the device outside its authorization in the U.S.?       Br parameter are programmed in flash memory and not accessible to the end-user?         ii) What controls exist that the user cannot operate the device outside its authorization in the U.S.?       RF parameter are programmed in flash memory and not accessible to the end-user.         iii) What controls exist that the user cannot operate the during the during outside its authorization in the U.S.?       RF parameter are programmed in flash memory and not accessible to the end-user.         iii) What controls exist that the user cannot operate the during the du		with these software security requirements for U-NII devices. If the module is controlled through driver software loaded in the host, describe how the drivers are controlled and managed such that the modular transmitter RF parameters are not	-
USER CONFIGURATION GUIDE         in What controls exist that the user cannot operate the device outside its authorization in the U.S.?         NA - This device is not subject to professional installation.           user?         i) Are the parameters in some way limited, so that the user?         IV and parameters in some way limited, so that the user?         IV and the parameters in some way limited, so that the installers will not enter parameters that exceed those authorized?         IV are the parameter in some way limited, so that the device outside its authorization in the U.S.?         IV are the end- user.           III What controls exist that the user cannot operate the device outside its authorization in the U.S.?         IV are the end- user.         IV are the end- user.           III Subject to the end- user.         IV and the end of the end- user.         IV and the end of the WIFI module: 2.4G or 5GHZ.           IV are the parameter are programmed in flash memory and not accessible to the end- user.         IV are the end- user.         IV are the end- user.           IV are the default parameters when the device is restarted?         IV are the default parameters when the device is restarted?         The country code is factory set and can not be changed in the UI.           III NDB Publication 905462 DD2.         When this device is operating as client in S GHZ operation, it will operate in "world" mode in which it will use passive scanning to confrom to region and requirements and bands allowed.           IV are the device that can be configured to ensure compliance?         Shor a device that can be configured to ensure compliance?	CONFIGURATION	<ul> <li>the UI. If different levels of access are permitted for professional installers, system integrators or endusers, describe the differences.</li> <li>a) What parameters are viewable and configurable by different parties?</li> <li>b) What parameters are accessible or modifiable to the professional installer or system integrators?</li> <li>i) Are the parameters in some way limited, so that the</li> </ul>	WIFI module: 2.4G or 5GHz. This device is not subject to professional installation.
USER CONFIGURATION GUIDE         user?         WFI module: 2.4G or 5GHz.           1) Are the parameters in some way limited, so that the installers will not enter parameters that exceed those authorized?         RF parameter are programmed in flash memory and not accessible to the end- user.           ii) What controls exist that the user cannot operate the device outside its authorization in the U.S.?         RF parameter are programmed in flash memory and not accessible to the end- user.           d) Is the country code factory set? Can it be changed in the UI?         The country code is factory set and can not be changed in the UI.           2. Can the radio be configured in bridge or mesh in KDB Publication 905462 DO2.         Not supported.           3. For a device that can be configured as a master and client (with active or passive scanning), if this is user configurable, describ what controls exist, within the UI, to ensure compliance for each mode. If the device acts as a master in some bands and client in others, how is this configured to ensure compliance?         When this device is operating as master in SGHz bands, it is set at factory to support on UNII-1 and UNII-3 channels.           0.11.11: 5180MHz-5220 MHz (CH 42) UNII-12: 5180MHz-5220 MHz (CH 42) UNII-13: 5745-5825 MHz (CH 155)         RF parameters are not affect when this device is either master or client mode.		authorized? ii) What controls exist that the user cannot operate the device outside its authorization in the U.S.?	professional installation. N/A-This device is not subject to professional installation.
USER       ii) What controls exist that the user cannot operate the device outside its authorization in the U.S.?       memory and not accessible to the enduser. This includes the country code regulatory parameters.         d) Is the country code factory set? Can it be changed in the UI?       The country code is factory set and can not be changed in the UI.         GUIDE       e) What are the default parameters when the device is restarted?       At each start up the factory configured country code and antenna gain are read from non-volatile memory.         2. Can the radio be configured in bridge or mesh mode? If yes, an attestation may be required. Further information is available in KDB Publication 905462 DO2.       Not supported.         3. For a device that can be configured as a master and client (with active or passive scanning), if this is user configurable, describe what controls exist, within the UI, to ensure compliance for each mode. If the device acts as a master in some bands and client in others, how is this configured to ensure compliance?       When this device is operating as master in SGH2 bands, it is set at factory to support only UNII-1 and UNII-3 channels. Channels for master mode: UNII-1: S180MH2:S240 MH2 (CH 42) UNII-1: S180MH2:S440 MH2 (CH		user? i) Are the parameters in some way limited, so that the installers will not enter parameters that exceed those	WIFI module: 2.4G or 5GHz. RF parameter are programmed in flash memory and not accessible to the end- user.
USER CONFIGURATION GUIDE         U!?         not be changed in the UI.           e)         What are the default parameters when the device is restarted?         At each start up the factory configured country code and antenna gain are read from non-volatile memory.           2.         Can the radio be configured in bridge or mesh mode? If yes, an attestation may be required. Further information is available in KDB Publication 905462 D02.         Not supported.           3.         For a device that can be configured as a master and client (with active or passive scanning), if this is user configurable, describe what controls exist, within the UI, to ensure compliance for each mode. If the device acts as a master in some bands and client in others, how is this configured to ensure compliance?         When this device is operating as master in SGHz bands, it is set at factory to support only UNII-1 and UNII-3 channels. Channels for master mode: UNII-1: STA0MHZ-5240 MHz (CH 42) UNII-1: ST45-5825 MHz (CH 155)           4.         For a device that can be configured as different types of         NA – Device has no external antenna		device outside its authorization in the U.S.?	memory and not accessible to the end- user. This includes the country code regulatory parameters.
GUIDE       2. Can the radio be configured in bridge or mesh mode? If yes, an attestation may be required. Further information is available in KDB Publication 905462 D02.       Not supported.         8. For a device that can be configured as a master and client (with active or passive scanning), if this is user configurable, describe what controls exist, within the UI, to ensure compliance for each mode. If the device acts as a master in some bands and client in others, how is this configured to ensure compliance?       When this device is operating as master in SGHz bands, it is set at factory to support only UNII-1 and UNII-3 channels. Channels for master mode: UNII-1: 5180MHz-5240 MHz (CH 42) UNII-1: 5180MHz-5240 MHz (CH 42) UNII-1: 5745-5825 MHz (CH 155)         8. For a device that can be configured as different types of       NA – Device has no external antenna		UI? e) What are the default parameters when the device is	not be changed in the UI. At each start up the factory configured country code and antenna gain are read
<ul> <li>GHz operation, it will operate in "world" mode in which it will use passive scanning to conform to region and requirements and bands allowed.</li> <li>Channels for client mode: 5180-5240MHz, 5260-5320MHz, 5500-5700MHz, 5745 - 5825MHz</li> <li>When this device is operating as master in some bands and client in others, how is this configured to ensure compliance?</li> <li>When this device is operating as master in SGHz bands, it is set at factory to support only UNII-1 and UNII-3 channels.
