**Subject: Class II Permissive Change for FCC ID: CMNT35**

To Whom It May Concern:

Williams Sound Corporation intends to apply a C2PC for the above referred FCC ID. There are several reasons for this change:

1. The new unit is a RoHS conversion.
2. We have beefed up the protection circuit at the microphone input.
3. We changed the crystal oscillator IC to a more reliable circuit.
4. We made minor circuit board changes for the sake of eliminating solder shorts during production.
5. We change a few parts from SMT to leaded to eliminate their tendency to fall off the PCB.

The PCB is essentially the same in form, fit, and function. The appearances are very similar. These changes are all incremental, rather than major. All product features are the same from outside the box. There are no specification changes, other than the RoHS conversion.

Please contact us if you have any questions.

Yours truly,

Lawrence (Butch) Herrington  
On behalf of WSC
