

## FCC ID: CQOFD00430

According to KDB 447498 D01 General RF Exposure Guidance v06.

At 100 MHz to 6 GHz and for test separation distances  $\leq 50$  mm, the SAR test exclusion threshold is determined according to the following.

$$\left[ \frac{\text{(max. power of channel, including tune-up tolerance, mW)}}{\text{(min. test separation distance, mm)}} \right] \times \sqrt{f(\text{GHz})} \leq 3.0$$

### 1. SAR test exclusion threshold

**Frequency: 433.92 MHz (min. separation distances = 0 mm)**

Calculation value:  $0.1 \text{ (mW)} / 5 \text{ (mm)} \times \sqrt{0.43392} = 0.013$

So, Calculation value  $\leq 3.0$

Remark;

- Max. Radiated field strength 66.22 (dB<sub>μV</sub>): Max. E.I.R.P. of EUT (-29.01 dBm)
- Max. E.I.R.P. 0.001 (mW) is less than 0.1 (mW), so 0.1 (mW) was calculated.
- When the minimum test separation distance is  $< 5$  mm, a distance of 5 mm is applied to determine SAR test exclusion.

**2. Conclusion: No SAR is required.**
