## FCC ID: CQOFD01340

According to KDB 447498 D01 General RF Exposure Guidance v06.

At 100 MHz to 6 GHz and for test separation distances  $\leq$  50 mm, the SAR test exclusion threshold is determined according to the following.

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] x [ $\sqrt{f(GHz)}$ ]  $\leq 3.0$ 

## 1. SAR test exclusion threshold Frequency: 433.92 ₩ (min. separation distances = 0 mm)

Calculation value: 0.000 2 (nW) / 5 (nm) x  $\sqrt{0.433}$  92 = 0.000 03 So, Calculation value  $\leq 3.0$ 

Remark;

- Max. Radiated field strength 57.13 (dBµ/m): Max. E.I.R.P. of EUT -38.10 dBm (0.000 2 mW)

- When the minimum test separation distance is < 5 m, a distance of 5 m is applied to determine SAR test exclusion.

## 2. Conclusion: No SAR is required.
