

9/14/10

MVP-9000i Operational Attestation

The MVP-9000i device is capable of operating on channels in the 2.4GHz band that are not available in the US and Canada (channels 12, 13 and 14). The products sold into the US and Canada are configured to only operate on channels 1 through 11 (the channels covered by the application for device authorization/certification) in the 2.4GHz band. The end user has no access to configuration tools that would enable use of the unauthorized channels.

Signed,

A handwritten signature in black ink, appearing to read 'H Sharp', is written over the printed name.
