Report No.: 2407RSU009-U4 Report Version: V01 Issue Date: 2024-09-14

RF Exposure Evaluation Declaration

FCC ID: DD4MXWAPX

Applicant: Shure Incorporated

Product: Access Point Transceiver

Regulatory Model MXWAPX

Number (RMN):

Product Number: MXWAPX4 Z10, MXWAPX8 Z10

Brand Name: SHURE SHURE

FCC Rule Part(s): FCC Part 2.1091

Result: Complies

Evaluation Date: 2024-09-11

Approved By:

Reviewed By:

1.4. Product Information

Product Name	Access Point Transceiver
Regulatory Model Number (RMN):	MXWAPX
Product Number:	MXWAPX4 Z10, MXWAPX8 Z10
DECT Specification	1920 MHz – 1930 MHz
Bluetooth Specification	v5.3 single mode, BLE only
Power Supply	PoE Input (37 - 57VDC, 12.95W)

Note 1: The information of EUT was provided by the manufacturer, and the accuracy of the information shall be the responsibility of the manufacturer.

Note 2: PoE Switch is not sold with product.

Note 3: MXWAPX4 supports 4 channel wireless microphones, MXWAPX8 supports 8 channel wireless microphones, they have same hardware with different software.

1.5. Antenna Details

Technology	Frequency Range (MHz)	Antenna	Antenna Type	Max Peak Gain (dBi)
BLE	2402 ~ 2480	Antenna E3000	PIFA	3.39
		Radio A Antenna E4003	PIFA	4.28
DCS 1800	1920 ~ 1930	Radio A Antenna E4004	PIFA	3.13
DC3 1000	1920 ~ 1930	Radio B Antenna E5003	PIFA	3.41
		Radio B Antenna E5004	PIFA	4.32

1.6. Device Classification

According to the user manual, this device is classified as a Mobile and Fixed Device. So, the RF exposure evaluation requirements of § 2.1091 for mobile device exposure conditions subject to MPE limits.

1.7. Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

• FCC Part 2.1091 & KDB 447498 D04 Interim General RF Exposure Guidance v01

2. RF Exposure Evaluation

2.1. Limits

According to FCC §1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in §1.1307(b)

Limits For Maximum Permissible Exposure (MPE)

Frequency Range	Electric Field	Magnetic Field	Power Density	Average Time		
(MHz)	Strength (V/m)	Strength (A/m)	(mW/cm ²)	(Minutes)		
	(A) Limits fo	r Occupational/ Contro	l Exposures			
0.3-3.0	614	1.63	*(100)	≤6		
3.0-30	1842/f	4.89/f	*(900/f ²)	<6		
30-300	61.4	0.163	1.0	<6		
300-1,500	-		f/300	<6		
1,500-100,000	1		5	<6		
	(B) Limits for General Population/ Uncontrolled Exposures					
0.3-1.34	614	1.63	*(100)	<30		
1.34-30	824/f	2.19/f	*(180/f ²)	<30		
30-300	27.5	0.073	0.2	<30		
300-1,500	1		f/1500	<30		
1,500-100,000	-		1.0	<30		

f= frequency in MHz. * = Plane-wave equivalent power density.

2.2. MPE Exemptions

For single RF sources (i.e., any single fixed RF source, mobile device, or portable device, as defined in paragraph §1.1307(b)(2) of this section): A single RF source is exempt if:

(Option A) The available maximum time-averaged power is no more than 1 mW, regardless of separation distance. This exemption may not be used in conjunction with other exemption criteria other than those in paragraph §1.1307(b)(3)(ii)(A) of this section.

Medical implant devices may only use this exemption and that in paragraph §1.1307(b)(3)(ii)(A);

(Option B) Or the available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold P (mW) described in the following formula. This method shall only be used at separation distances (cm) from 0.5 centimeters to 40 centimeters and at frequencies from 0.3 GHz to 6 GHz (inclusive). P is given by:

$$P th(mW) = \{ERP_{20cm}(d / 20cm)^x d \le 20cm\}$$

$$P th(mW) = \{ERP_{20cm} 20cm < d \le 40cm\}$$

Where

$$x = -\log_{10}\left(\frac{60}{ERP_{20cm}\sqrt{f}}\right)$$
 and f is in GHz;

and

$$ERP_{20cm}(mW) = \{2040f \ 0.3GHz \le f < 1.5GHz\}$$

$$ERP_{20cm}(mW) = \{3060 \ 1.5GHz \le f \le 6GHz \}$$

(Option C) Or using Table 1 and the minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. For the exemption in Table 1 to apply, R must be at least $\lambda/2\pi$, where λ is the free-space operating wavelength in meters. If the ERP of a single RF source is not easily obtained, then the available maximum time-averaged power may be used in lieu of ERP if the physical dimensions of the radiating structure(s) do not exceed the electrical length of $\lambda/4$ or if the antenna gain is less than that of a half-wave dipole (1.64 linear value).

Table 1 to \$1.1307(b)(3)(i)(C)	- Single RF Sources Sub	ject to Routine Environmental Evaluation
10.0.0		1000 10 1 10 0 10 10 10 10 10 10 10 10 1

RF Source Frequency (MHz)	Threshold ERP (watts)
0.3-1.34	1920R ²
1.34-30	3450R ² /f ²
30-300	3.83R ²
300-1,500	0.0128R ² f
1,500-100,000	19.2R ²

For multiple RF sources: Multiple RF sources are exempt if:

(A) The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required). This exemption may not be used in conjunction with other exemption criteria other than those is paragraph §1.1307(b)(3)(i)(A) of this section. Medical implant devices may only use this exemption and that in paragraph §1.1307(b)(3)(i)(A).

(B) in the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^{a} \frac{P_i}{P_{th,i}} + \sum_{j=1}^{b} \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

Where:

a = number of fixed, mobile, or portable RF sources claiming exemption using paragraph §1.1307(b)(3)(i)(B) of this section for P_{th} , including existing exempt transmitters and those being added.

b = number of fixed, mobile, or portable RF sources claiming exemption using paragraph 1.1307(b)(3)(i)(C) of this section for Threshold ERP, including existing exempt transmitters and those being added.

c = number of existing fixed, mobile, or portable RF sources with known evaluation for the specified minimum distance including existing evaluated transmitters.

 P_i = the available maximum time-averaged power or the ERP, whichever is greater, for fixed, mobile, or portable RF source i at a distance between 0.5 cm and 40 cm (inclusive).

 $P_{th,i}$ = the exemption threshold power (P_{th}) according to paragraph §1.1307(b)(3)(i)(B) of this section for fixed, mobile, or portable RF source i.

 ERP_j = the ERP of fixed, mobile, or portable RF source j.

 $ERP_{th,j}$ = exemption threshold ERP for fixed, mobile, or portable RF source j, at a distance of at least $\lambda/2\pi$ according to the applicable formula of paragraph §1.1307(b)(3)(i)(C) of this section.

Evaluated_k = the maximum reported SAR or MPE of fixed, mobile, or portable RF source k either in the device or at the transmitter site from an existing evaluation at the location of exposure.

Exposure Limit_k = either the general population/uncontrolled maximum permissible exposure (MPE) or specific absorption rate (SAR) limit for each fixed, mobile, or portable RF source k, as applicable from §1.1310 of this chapter.

Report No.: 2407RSU009-U4

2.3. Calculated Result

Product	Access Point Transceiver
Test Item	RF Exposure Evaluation

For single RF source, Option C

Test Mode	Frequency Band	λ/2π	R	Tune-up	Tune-up	Tune-up	Thresholds
	(MHz)	(m)	(m)	Conducted	ERP	ERP	ERP
				Power (dBm)	(dBm)	(mW)	(mW)
DECT-Radio A	1920 ~ 1930	0.025	0.20	20	22.13	163.31	768
DECT-Radio B	1920 ~ 1930	0.025	0.20	20	22.17	164.82	768
Bluetooth-LE	2402 ~ 2480	0.020	0.20	10	11.24	13.30	768

Notes:

- 1. R is from user manual.
- 2. Tune-up power was declared by manufacturer.
- 3. The DECT + BLE simultaneous transmissions, therefore, the worst-case total exposure ratios = 163.31/768 + 164.82/768 + 13.30/768 = 0.45 < 1.

CONCLUSION:

The device qualifies for RF exposure test exemption at 20cm distance.

The End
