

DESCRIPTION OF SHURE PSM700 PERSONAL STEREO MONITOR SYSTEM

The Shure PSM700 Personal Stereo Monitor System is a frequency-agile, UHF wireless, two-channel, monitor system designed for onstage applications. The PSM has several advantages over onstage loudspeaker monitors: it is less visible, has better sound, allows freedom of movement, and reduces the chances of feedback. It is a versatile system, designed for use in many different sound reinforcement applications: public address, live music, theater, and electronic news gathering (ENG). The wireless system is frequency compatible with other Shure UHF and VHF wireless systems.
