

Statement

(See file: Radio PC Card Block Diagram.pdf)

This is the information regarding the VCO frequencies used in the device. I have not marked up the block diagram but simply referenced it as below.

- i) There is a 44MHz clock source as already detailed on the block diagram mentioned above)
- ii) The VCO associated with the HFA3783 is set to 748MHz
- iii) The VCO associated with the HFA3683A is dependant upon the channel used and is set to the channel frequency -374MHz (e.g. when Channel 1 is being used the VCO is set to $2412-374=2038$ MHz).
