2 Technical test

2.1 Summary of test results

No deviations from the technical specification(s) were ascertained in the course of the tests Performed	
Final Verdict: (only "passed" if all single measurements are "passed")	Passed

Note: The tests were done for channel 1-11 with a power setting PC=120 and for the channels 12 and 13 with PC=80.

The device will limit the output power for the channels 12 and 13 according the values evaluted during testing (PC=80). (see page 20).

The High band edge measurements were done with the different power settings in order to show compliance for both combinations

- 11 channel with high power (See results page 31/32)
- 13 channel with lower power setting (See results page 33/34).

LIMITS**

§ 15.247 (c) (1)

In any 100 kHz bandwidth outside the frequency band at least 20dB below the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

NOTE: Frequency resolution is not fine enough to show the exact frequency of the carrier, refer to plots under EIRP.

Transmitter (Radiated)**

§ 15.247 (c) (1)

LIMITS

In any 100 kHz bandwidth outside the frequency band at least 20dB below the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

NOTE:

1. The radiated emissions were done with different settings, using the relevant pre-amplifiers for the relevant frequency ranges. This is the reason that the graphs show different noise levels. In the range between 18 and 25 GHz very short cable connections to the antenna was used to minimize the noise level.

Emission below 1GHz were made according ANSI C63.4

2. Frequency resolution is not fine enough to show the exact frequency of the carrier, refer to plots under EIRP.
