

# TEST RESULT SUMMARY

## UNITED STATES STANDARD 47 CFR PART 15, SUBPART B & 47 CFR PART 15, SUBPART C, SECTION 15.247

FCC ID : DF6-WL311

MANUFACTURER NAME	3Com Corporation
NAME OF EQUIPMENT	SL-1021
MODEL NUMBER	WL-311
MANUFACTURER ADDRESS	5400 Bayfront Plaza Santa Clara, CA 95054
TEST REPORT NUMBER	AC104006F01
TEST DATE	6/4/2001

According to testing performed at BABT Product Service, the above-mentioned unit is in compliance with the electromagnetic compatibility requirements defined in United States Standard 47 CFR Part 15, Subpart B.

BABT Product Service reports apply only to the specific sample tested under stated test conditions. It is the manufacturer's responsibility to assure the continued compliance of production units of this model. BABT Product Service shall have no liability for any deductions, inferences or generalizations drawn by the client or others from BABT Product Service issued reports.

As the responsible EMC Project/Division Managers, we hereby declare that the equipment tested at BABT Product Service as specified above conforms to the requirements of United States Standard 47 CFR Part 15, Radio Frequency Devices, Subpart B, Unintentional Radiators.

Date: 2 July, 2001

Location: Santa Clara, California  
USA

### Environmental Conditions In The Laboratory:

	<u>Actual</u>
Temperature:	: 23 °C
Relative Humidity:	: 60 %
Atmospheric Pressure:	: 101.0 kPa

### Power Supply Utilized:

Power supply system : 120 V / 60 Hz / 1 $\phi$

### Symbol Definitions:

- - Applicable
- - Not Applicable

### Description of EUT:

Building to Building bridge with an external antenna connector.

### Measurement Methods

Measurements were made in accordance with ANSI C63.4:1992. All emissions measurements are fully automated.

For conducted emissions, the receiver is swept over the frequency range 450kHz to 30MHz using detector functions as specified in CISPR 16. The measured levels from the receiver are then re-calculated taking into account the LISN and coax cable loss to derive the corrected level. This is then compared with the limits specified in FCC 47 CFR Part 15.107 to determine the compliance of the EUT.

For radiated emissions, the receiver is swept over the frequency range 30MHz to 1000MHz, while the turntable is rotated through 360° and the antenna height is varied between 1m and 4m. The worst-case emission level is recorded for each frequency and recorded for the full frequency range. The measured levels from the receiver are then re-calculated taking into account the antenna gain, mast amplifier gain and coax cable loss to derive the corrected level. All peak emissions over the limit are re-measured using the CISPR 16 quasi-peak detector, in any case the highest 15 peaks are re-measured. These are then compared with the limits specified in FCC 47 CFR Part 15.109 to determine the compliance of the EUT.

FCC ID : DF6-WL311

## Sample Calculations

These calculations are performed automatically by the control software prior to display. For radiated emissions the corrected level is derived by taking into account the antenna gain, antenna mast amplifier and coax cable loss.

For example, assuming a receiver measurement of 50.0dB $\mu$ V. Allowing for an antenna factor of 10.0dB/m, a mast amplifier gain of 25dB and a cable loss of 0.64dB, the resultant corrected field strength would be calculated as follows:-

Receiver level = field strength - antenna factor + amplifier gain - cable factor

Corrected field strength = (Receiver level) + (Cable factor) - (Amp gain) + (Antenna factor)

$$= 50.0 + 10.0 + 0.64 - 25$$

$$= 35.64\text{dB}\mu\text{V/m}$$

FCC limits are specified in  $\mu$ V for conducted emissions and  $\mu$ V/m for radiated emissions. These are converted to dB $\mu$ V and dB $\mu$ V/m respectively by the control software before results are displayed, limits being converted accordingly. The conversion factor is  $20 \log_{10}(\mu\text{V}) = \text{dB}\mu\text{V}$ .

FCC ID : DF6-WL311

**Emissions Test Conditions: CONDUCTED EMISSIONS (Interference Voltage)**

The *CONDUCTED EMISSIONS (INTERFERENCE VOLTAGE)* measurements were performed at the following test location:

- Test not applicable

- - Test area no. 1 – Semi - anechoic absorber – lined chamber (80' x 44' x 28')
- Test area no. 2 – Shielded room (19' x 19' x 8' )
- Test area no. 3 – Fully – anechoic ferrite – lined chamber (24' x 16' x 11' )

Channel	Freq (MHz)	Measured Output Power dBm	Cable Loss dB	12dB	Corrected Output Power dBm	Limit dBm	Margin dB
CH1	2413	-1.1	9.5	12	20.4	30	-9.6
CH7	2436	-3.5	9.5	12	18.0	30	-12.0
CH13	2471	-1.6	9.5	12	19.9	30	-10.1

Notes:

1. 9.5 dB in column 4 is the cable loss provided by client (50 ft cable)
2. 12 dB in column 5 is the difference between antenna gain 18dBi and 6 dBi stated in section 15.247

**Test Equipment used:**

Model No.	Description	Manufacturer	Serial No.	Due Calib. Date
■ - 85462A	Receiver RF Section	Hewlett Packard	3325A00161	5/15/02
■ - 85460A	RF Filter Section	Hewlett Packard	3330A00160	5/15/02
■ - 8566B	Spectrum Analyzer	Hewlett Packard	2421A00443	6/7/02
■ - 85680B	Spectrum Analyzer, RF section	Hewlett Packard	2732A04047	5/15/02

**Out of Band Emissions, and Emissions in Restricted Bands:**

**Notes :**

1. There are no signals found at a level greater than  $-37.5$  dB of the fundamental frequency power level for CH1, CH7 and CH13 up to the 10<sup>th</sup> harmonic of the fundamental frequency.
2. There are no signals found within the restricted bands of operation mentioned in section 15.205

Radiated Emissions Setup Diagram

FCC ID : DF6-WL311

**GENERAL REMARKS:**

No modifications were necessary in order for the EUT to meet the emissions requirements.

**SUMMARY:**

All tests according to the regulations cited on page 3 were

- Performed
- **Not** Performed

The Equipment Under Test

- **Fulfills** the general approval requirements cited on page 3.
- **Does not** fulfill the general approval requirements cited on page 3.

**Statement of Measurement Uncertainty**

The data and results referenced in this document are true and accurate. There may be some degree or level of measurement uncertainty. As EN 45001 does not allow recommendations to be included in the test report, the reader is encouraged to request a copy of the BABT Product Service policy concerning pass or fail judgment with respect to possible measurement uncertainties.

Measurement uncertainty for radiated emissions is +/- 3.7 dB.  
Measurement uncertainty for conducted emissions is +/- 2.2 dB.

Equipment Received Date: 5/15/2001  
Testing Start Date: 5/15/2001  
Testing End Date: 6/4/2001

CUSTOMER INFORMATION			
COMPANY NAME:		3Com Corporation	
COMPANY ADDRESS:		5400 Bayfront Plaza	
		Santa Clara, CA 95054	
PHONE NUMBER:		(408) 326-2878	
FAX NUMBER/E-MAIL ADDRESS:		(408) 326-5854 / david_boldy@3com.com	
CUSTOMER CONTACT:		David Boldy	
PRODUCT DESCRIPTION			
NAME, MODEL, SERIAL # OF EUT:		SL_1021, WL_311	
DESCRIPTION OF EUT:		Building to Building bridge with an external antenna connector	
Components of EUT			
Description	Model Number	Serial Number	FCC ID Number
B to B Bridge X 2	WL_311	N/A	N/A
Power Supply X 2	ADP-0502-5V	N/A	N/A
18 dBi antenna (worst case)	MP24018	N/A	N/A
13.8 and 4 dBi antennas (not submitted for test)	N/A	N/A	N/A
Trilogy AP Antenna submitted for ETS 300 386 immunity testing only. (Not to be assessed)	N/A	N/A	N/A
OPERATING MODE(S):		Operation for test per instruction sheet submitted. Continuous DSSS signal provided via test modes. Immunity testing to be checked using CC32 software. The software will send data from one PC to another and back again wirelessly. The original data is then compared to the received to check for errors.

## Compliance Information

### Labeling

Equipment subject to Declaration of Conformity procedures shall be labeled in accordance with Part 2 of the Regulations.

### Compliance Statement

Equipment subject to Declaration of Conformity authorization procedures must be accompanied by a compliance information statement when placed on the market, which must contain the following information: -

- 1) Equipment identification
- 2) Statement of compliance with Part 15:-

“This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.”

- 3) Identification and contact details of the responsible party located in the United States.

This statement can either be printed in the user guide or alternatively as an addendum.

The following warning statement must also be included in the equipment manual:-

“Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate this equipment.”
