

MODEL 812 CONVERSION STATION OPERATIONAL DESCRIPTION

The 3M Conversion Station Model 812 is intended for use in converting library items that use optical barcode technology to RFID technology using 3M™ RFID Tags.

The system is utilized by activating the provided software via the operator interface screen. Operational steps include:

- accessing software
- dispensing of an RFID tag
- placement of RFID tag onto article
- placement of article in bar code and RFID detection area
- activation of bar code reader and acquisition of article information
- transmission of article information into RFID tag memory

The Model 812 is designed and intended for use in an indoor library environment. It has not been evaluated for other uses or locations.
