RE: DKNCR90

To Whom It May Concern:

The ID:072 product is a 802.11a/n/ac client device only. Users and installers do not have access to nor can they configure the SW within the product. We as the manufacturer maintain sole ability to modify the internal SW and will maintain compliance with the original grant when doing so.

SW updates to the product occur using an encrypted data transfer between a master device and the product. The process is initiated and controlled by EchoStar at all times. At no time is the user able to access, view, store, delete, or modify the SW data package. SW data files are checked for specific EchoStar authenticity within the product and then loaded upon the next power cycle of the product. The users and installers do not have access to change any functions of the device that would place it in an operational mode outside of the FCC grant limits/bands.

Sincerely,

Ian Schroeder
Regulatory Compliance Engineer
EchoStar Technologies L.L.C.
