

SENNHEISER APPLICATION FOR WIRELESS MICROPHONE SYSTEM

Application filed for certification under Section 15.249 of the FCC Rules

The Sennheiser application is requesting certification of a product family consisting of Models RS 30, RS 40, RS 60, and RS 80. They use identical transmitter output circuitry and differ only in the features that are available from the receiver decoder circuitry, such as stereo capability, etc. Test report for the Mdl. 30, 40, and 80 have been filed showing compliance with the applicable limits. The test report for the Mdl. 60 transmission file was corrupted during transmission and was not available for filing. Due to the similarity of the units (all models use the same transmitter output circuits), it does not appear to be necessary to file the report for the Mdl. 60. However, if the reviewer judges that it is needed, I will be pleased to forward a copy to you.
