October 6, 2010

Dear Sir/Madam,

Pursuant to Part 15.212 and DA 00-1407, we request modular approval for the Counterpoint IX system as a Class II Permissive Change filing per FCC ID: **DO4CP9**. Applicable requirements are met by the steps outlined below:

- (i) The radio elements of the modular transmitter has its own shielding, and external shielding isn't relied upon for compliance.
- (ii) No data inputs apply with respect to the subject modular transmitter.
- (iii) The modular transmitter has its own power supply regulation.
- (iv) The modular transmitter complies with the antenna and transmission system requirements of §§ 15.203, 15.204(b) and 15.204(c). The antenna employs a "unique" antenna coupler at all connections between the module and the antenna.
- (v) The modular transmitter was tested in a stand-alone configuration without being installed in another device during Part 15 compliance testing. It also complies with the AC line conducted requirements found in § 15.207 and both AC power line and I/O cables connected to the module do not contain ferrites.
- (vi) The modular transmitter is labeled with its own FCC identification number. An instruction sheet to install this label on the outside of the device into which the module is installed with the wording "**Contains FCC ID: DO4CP9**". A label sample is supplied with this application for equipment authorization.
- (vii) The modular transmitter is a standalone system and complies with all applicable Part 15 requirements.
- (viii) The modular transmitter complies with applicable RF exposure requirements

Thank you.
