1 TEST STANDARDS

The tests were performed according to following standards:

FCC Rules and Regulations Part 15 Subpart C - Intentional Radiators (October 01, 2003)

Part 15, Subpart C, Section 15.223	Operation in the band 1.705-10 MHz §15.223(a) Radiated emissions, Fundamental & Harmonics
Part 15, Subpart C, Section 15.207(a)	AC Line conducted emissions
Part 15, Subpart C, Section 15.209(a)	Radiated emissions, general requirements

2 SUMMARY

GENERAL REMARKS:

The product Liberty CFX has been tested on the following frequencies:

Cont. sweep mode: 8.2 MHz
9.5 MHz

The bandwidth requirements are kept.

FINAL ASSESSMENT:

The equipment under test **fulfills** the EMI requirements cited in clause 1 test standards.

Date of receipt of test sample : acc. to storage records of MBPS

Testing commenced on : 24. November 2004

Testing concluded on : 14. January 2005

Checked by:

Tested by:

Thomas Weise
Dipl. Ing.(FH)

Markus Huber

3.2 Ferrite Locations

1. Fair Rite P/N 284760 (Order No 0443806406) or Fair Rite P/N 7118986 (Order No B64290-L618-X35)
– Add a ferrite on each sync cable with three turns.
2. Fair Rite P/N 284760 (Order No 0443806406) or Fair Rite P/N 7118986 (Order No B64290-L618-X35)
– Add a ferrite on the DC cable with four turns.

3.3 Power supply system utilised

Power supply voltage : 115 V / 60 Hz
24 V / DC

3.4 Short description of the Equipment under Test (EuT)

The Liberty CFX is an Electronic Article Surveillance System (EAS). The system detects target tags attached to merchandise. The targets resonate in the region of 8.2 MHz or 9.5 MHz. When an article of merchandise is purchased, the target is deactivated which causes it to no longer resonate. The Liberty CFX system monitors an area 3-feet on either side of the antenna in the 7.4 to 10.0 MHz range and triggers an alarm when a non-deactivated target is detected.

Number of tested samples: 1 Liberty CFX system

Serial number: Prototype

EuT operation mode:

The equipment under test was operated during the measurement under the following conditions:

- A security tag was swept through the field of the Liberty CFX antenna every 2 seconds to initiate a verification cycle

-

-

EuT configuration:

(The CDF filled by the applicant can be viewed at the test laboratory.)

The following peripheral devices and interface cables were connected during the measurements:

- PSU (Power Supply Unit) Model : WW 425 Module #345614
- PSU (Power Supply Unit) Model : Globtek, GT-2S5024D-R #00420829/04
- Filtered mains cable Model : IMX-04
- Standard mains cable Model : _____
- _____ Model : _____
- _____ Model : _____
- customer specific cables

4 TEST ENVIRONMENT

4.1 Address of the test laboratory

MIKES BAPT Product Service GmbH
Ohmstrasse 2-4
94342 Strasskirchen
Germany

4.2 Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

Temperature: 15-35 ° C

Humidity: 30-60 %

Atmospheric pressure: 86-106 kPa

4.3 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16-4-2 /11.2003 „Uncertainties, statistics and limit modelling – Uncertainty in EMC measurements“ and is documented in the MIKES BAPT Product Service GmbH quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

4.4 Measurement Protocol for FCC, VCCI and AUSTEL

4.4.1 GENERAL INFORMATION

4.4.1.1 Test Methodology

Conducted and radiated disturbance testing is performed according to the procedures in International Special Committee on Radio Interference (CISPR) Publication 22 (1997), European Standard EN 55022 and Australian Standard AS 3548 (which are based on CISPR 22).

The Japanese standard, "Voluntary Control Council for Interference (VCCI) by Data Processing Equipment and Electronic Office Machines, Technical Requirements" is technically equivalent to CISPR 22 (1997). For official compliance, a conformance report must be sent to and accepted by the VCCI.

In compliance with FCC Docket 92-152, "Harmonization of Rules for Digital Devices Incorporate International Standards", testing for FCC compliance may be done following the ANSI C63.4-2003 procedures and using the CISPR 22 Limits.

4.4.1.2 Measurement Error

The data and results referenced in this document are true and accurate. The reader is cautioned that there is some measurement variability due to the tolerances of the test equipment that can contribute to a nominal product measurement uncertainty. The measurement uncertainty was calculated for all measurements listed in this test report according to NIS 81/5.1994 "The treatment of uncertainty in EMC measurements" and is documented in the MIKES BABT Product Service GmbH quality system according to DIN EN ISO/IEC 17025. Furthermore, component differences and manufacturing process variability of production units similar to that tested may result in additional product uncertainty. If necessary, refer to the test lab for the actual measurement uncertainty for specific tests. The manufacturer has the sole responsibility of continued compliance of the device.

4.4.1.3 Justification

The Equipment Under Test (EUT) is configured in a typical user arrangement in accordance with the manufacturer's instructions. A cable is connected to each available port and either terminated with a peripheral into its characteristic impedance or left unterminated. When appropriate, the cables are manually manipulated with respect to each other to obtain maximum disturbances from the unit.

4.4.2 DETAILS OF TEST PROCEDURES

General Standard Information

The test methods used comply with CISPR Publication 22 (1997), EN 55022 (2001) and AS 3548 (1992) - "Limits and Methods of Measurement of Radio Interference Characteristics of Information Technology Equipment" and with ANSI C63.4-2003 Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz."

4.5 Deviations or Exclusions from the Requirements and Standards

Measurement of the fundamental – 8.2MHz (7.4MHz – 8.9MHz) and 9.5MHz (8.7 – 10.0MHz) – was performed by setting a spectrum analyzer to “max-hold”, peak detector, a 300 kHz bandwidth and a span from 6.5 MHz to 10 MHz. A resolution bandwidth of 300 kHz was used in performing the “true peak” measurements, because increasing the bandwidth above 300 kHz did not increase the detected peak of the fundamental.

4.6 Operation in Restricted Bands

The EUT is a digital swept frequency hopping transmitter. The EUT hops on discrete frequencies. The discrete frequencies that can be transmitted by the EUT are as follows:

8.2 MHz sweep tables

The restricted frequency bands (per FCC Part 15 Clause 15.205) in the operating frequency band of the EuT are as follows:

- 8.291 – 8.294 MHz
- 8.362 – 8.366 MHz
- 8.37625 – 8.38675 MHz
- 8.41425 – 8.41475 MHz

The transmitter is not capable of hopping into, or operating, in the restricted frequency bands and therefore complies with the restriction.

5 TEST CONDITIONS AND RESULTS

5.1 Conducted emissions

For test instruments and accessories used see section 6 Part A 4.

5.1.1 Description of the test location

Test location: Shielded Room S2

5.1.2 Photo documentation of the test set-up

5.1.3 Description of Measurement

The final level, expressed in dB μ V, is arrived at by taking the reading directly from the EMI receiver. This level is compared directly to the FCC Limit or to the CISPR limit, which is equivalent to the Australian AS 3548 limit.

To convert between dB μ V and μ V, the following conversions apply:

$$\text{dB}\mu\text{V} = 20(\log \mu\text{V})$$

$$\mu\text{V} = \text{Inverse log}(\text{dB}\mu\text{V}/20)$$

Conducted emissions on the 50 Hz and/or 60 Hz power interface of the EuT are measured in the frequency range of 150 kHz to 30 MHz. The measurements are performed using a receiver, which has CISPR characteristic bandwidth and quasi-peak detection, and a Line Impedance Stabilization Network (LISN), with 50 Ω /50 μ H (CISPR 16) characteristics. Table top equipment is placed on a non-conducting table 80 centimeter's above the floor and is positioned 40 centimeter's from the vertical ground plane (wall) of the screen room. If the minimum passing margin appears to be less than 20 dB with a peak mode measurement, the emissions are remeasured using a tuned receiver with quasi-peak and average detection and recorded on the data sheets.

5.1.4 Test result

Frequency range: 0.15 – 30 MHz

Min. limit margin 17.7 dB at 8.3 MHz

The requirements are **FULFILLED**.

5.2 Field strength of the fundamental wave

For test instruments and accessories used see section 6 Part CPR 1.

5.2.1 Description of the test location

Test location: Open Area Test Site

Test distance: 30 metres

5.2.2 Photo documentation of the test set-up

5.2.3 Description of Measurement

The final level, expressed in dB μ V/m, is arrived at by taking the reading from the EMI receiver (Level dB μ V) and adding the antenna correction factor and cable loss factor (Factor dB) to it. This result then has to be compared with the relevant FCC limit.

The resolution bandwidth during the measurement was 300 kHz.

Example:

Frequency (MHz)	Level (dB μ V)	+	Factor (dB)	=	Level (dB μ V/m)	Limit (dB μ V/m)	=	Delta (dB)
1.705	5	+	20	=	25	30	=	5

* At a test distance of 30 metres

The requirements are **FULFILLED**.

Remarks:

5.3 Spurious emissions (Magnetic field) 9 kHz – 30 MHz

For test instruments and accessories used see section 6 Part SER 1.

5.3.1 Description of the test location

Test location: Open Area Test Site

Test distance: 30 metres

5.3.2 Photo documentation of the test set-up

5.3.3 Description of Measurement

Spurious emissions from the EuT are measured in the frequency range of 9 kHz to 30 MHz using a tuned receiver and a shielded loop antenna. The antenna was positioned 3, 10 or 30 meters horizontally from the EuT. Measurements have been made in all three orthogonal axes and the shielded loop antenna was rotated to locate the maximum of the emissions.

The final level, expressed in dBµV/m, is arrived at by taking the reading from the EMI receiver (Level dBµV) and adding the antenna correction factor and cable loss factor (Factor dB) to it. This result then has to be compared with the relevant FCC limit.

The resolution bandwidth during the measurement is as follows:

9 kHz – 150 kHz: ResBW: 200 Hz
 150 kHz – 30 MHz: ResBW: 300 kHz

Example:

Frequency (MHz)	Level (dBµV)	+	Factor (dB)	=	Level (dBµV/m)	Limit (dBµV/m)	=	Delta (dB)
1.705	5	+	20	=	25	30	=	5

5.3.4 Test result

TX frequency: 8.2 MHz

Frequency [MHz]	L: PK [dBµV]	L: AV [dBµV]	L: QP [dBµV]	Correct. [dB]	L: PK [dBµV/m]	L: AV [dBµV/m]	L: QP [dBµV/m]	Limit [dBµV/m]	Delta [dB]
0.09 - 30	-	-	-	20	-	-	-	40.0	>20

TX frequency: 9.5 MHz

0.09 - 30	-	-	-	20	-	-	-	40.0	>20

Limit according to FCC Part 15 Subpart 15.209(a), Subpart 15.223(a)

Frequency (MHz)	Field strength of spurious emissions		Measurement distance (meters)
	(µV/m)	dB (µV/m)	
0.009-0.490	2400/F(kHz)	--	300
0.490-1.705	24000/F (kHz)	--	30
1.705-30.0	100	40	30

The requirements are **FULFILLED**.

Remarks: The limits are met, because the margin from the measured values to the limit is > 20dB.

5.4 Radiated emissions (electric field) 30 MHz – 1 GHz

For test instruments and accessories used see section 6 Part SER 2.

5.4.1 Description of the test location

Test location: OATS1

Test distance: 3 metres

5.4.2 Photo documentation of the test set-up

5.4.3 Description of Measurement

Spurious emissions from the EuT are measured in the frequency range of 30 MHz to 10 times the highest used frequency using a tuned receiver and appropriate broadband linearly polarized antennas. Measurements between 30 MHz and 1000 MHz are made with 120 kHz/6 dB bandwidth and quasi-peak detection. Table top equipment is placed on a 1.0 X 1.5 meter non-conducting table 80 centimetres above the ground plane. Floor standing equipment is placed directly on the turntable/ground plane. Interface cables that are closer than 40 centimetres to the ground plane are bundled in the center in a serpentine fashion so they are at least 40 centimetres from the ground plane. Cables to simulators/testers (if used in this test) are routed through the center of the table and to a screen room located outside the test area. The antenna was positioned 3, 10 or 30 meters horizontally from the EuT. To locate maximum emissions from the test sample the antenna is varied in height from 1 to 4 meters, measurement scans are made with both horizontal and vertical antenna polarization's and the EuT are rotated 360 degrees.

The final level, expressed in dB μ V/m, is arrived by taking the reading from the EMI receiver (Level dB μ V) and adding the correction factors and cable loss factor (Factor dB) to it. This is done automatically in the EMI receiver, where the correction factors are stored. This result then has the FCC or CISPR limit subtracted from it to provide the Delta which gives the tabular data as shown in the data sheets at page.

Example:

$$\begin{array}{rclclclclcl}
 \text{Frequency} & & & & & & & & & & \\
 \text{(MHz)} & & \text{Level} & + & \text{Factor} & = & \text{Level} & & \text{Limit} & = & \text{Delta} \\
 & & \text{(dB}\mu\text{V)} & & \text{(dB)} & & \text{(dB}\mu\text{V/m)} & & \text{(dB}\mu\text{V/m)} & & \text{(dB)} \\
 719 & & 75 & + & 32.6 & = & 107.6 & & 110 & = & -2.4
 \end{array}$$

5.6 Correction for Pulse Operation (Duty Cycle)

For test instruments and accessories used see section 6 Part DC.

5.6.1 Description of the test location

Test location: AREA4

5.6.2 Test result

The Duty cycle factor, expressed in dB, is arrived by taking the following formula:

$$KE = 20 \log [(t_{IB} * p) / T_w]$$

- KE: pulse operation correction factor [dB]
- t_{iw} : pulse duration for one complete pulse track [msec]
- t_{IB} : pulse duration for one pulse [μ sec]
- T_w : a period of the pulse track [msec]
- p: number of pulses in one train

t_{iw} [msec]	T_w [msec]	t_{IB} [μ sec]	p	KE [dB / %]
4.107	12.879	6.032	64	-30.46 / 2.99

Remarks: For detailed results, please see the test protocol below.

7 Constructional dataform for testing

Licence holder:	Checkpoint Systems Inc.		
Address:	101 Wolf Drive, Thorofare, NJ 08086		
Manufacturer:	Sabanetas Industrial Park, P.O. Box 7283, Ponce, Puerto Rico 00732		
Type:	Electronic Article Surveillance Detection System		
Model:	Liberty CFX (TR4024 electronic)		
Serial-No.:	Prototype	Protection class:	

Additional information to the above named model:

Antenna: transmitter:	Type: Loop Antennas
	Length/size: W: 609.6 mm H: 2438.4 mm
receiver:	Type: N/A
	Length/size: N/A
Power supply of the transmitter: Type:	nominal voltage: 24.0 V
	lowest voltage: 18.0 V
	highest voltage: 25.0 V
	current consumption 0.4 A
Power supply of the receiver: Type:	Same as Transmitter
	nominal voltage: V
	current consumption A

Ancillary equipment:

Description:	PSU	Type:	Worldwide 425 Module	Serial-no.:	345614
Description:	PSU	Type:	Globtek, GT-2S5024D-R	Serial-no.:	00420829/04
Description:	IMX-04	Type:	Filtered mains cable	Serial-no.:	Not available

Extreme temperature range in which the approval test should be performed:

- Category I: General (-20°C to +55°C)
- Category II: Portable (-10°C to +55°C)
- Category III: Equipment for normal indoor use (0°C to +55°C)

Connectable cables:

Name of the cable	Digital	Length/m	shielded
DC - Cable	<input type="radio"/> yes <input checked="" type="checkbox"/> no	5.0	<input checked="" type="checkbox"/> yes <input type="radio"/> no
Sync - cables	<input checked="" type="checkbox"/> yes <input type="radio"/> no		<input checked="" type="checkbox"/> yes <input type="radio"/> no
	<input type="radio"/> yes <input type="radio"/> no		<input type="radio"/> yes <input type="radio"/> no
	<input type="radio"/> yes <input type="radio"/> no		<input type="radio"/> yes <input type="radio"/> no
	<input type="radio"/> yes <input type="radio"/> no		<input type="radio"/> yes <input type="radio"/> no

Type designation: LIBERTY CFX with TR4024 Electronic			
Name and type designation of individual units comprising the radio equipment:			
Type of equipment:			
<input type="checkbox"/> Radiotelephone equipment	<input type="checkbox"/> Remote-control equipment	<input type="checkbox"/> Radiomaritime equipment	<input type="checkbox"/> LPD
<input type="checkbox"/> One-way radiotelephone equipment	<input checked="" type="checkbox"/> Inductive loop system	<input type="checkbox"/> Inland waterways equipment	<input type="checkbox"/> RLAN
<input type="checkbox"/> Personal paging system	<input type="checkbox"/> Radio-relay system	<input type="checkbox"/> Radionavigation equipm.	<input type="checkbox"/>
<input type="checkbox"/> Satellite earth station	<input type="checkbox"/> CB radiotelephone equipment	<input type="checkbox"/> Antenna	<input type="checkbox"/>
<input type="checkbox"/> Data transmission equipment	<input type="checkbox"/> Movement detector	<input type="checkbox"/> Aeronautical equipment	<input type="checkbox"/>
Technical characteristics:			
	Transmitter-receiver	Transmitter	Receiver
Frequency range	7.4-10.0 MHz		
Maximum no. of channels	1		
Channel spacing			
Class of emission (type of modulation)	PON		
Maximum RF output power			
Maximum effective radiated power (ERP)	40 dBµV/m at 30m		
Output power variable	Yes		
Channel switching frequency range			
Method of frequency generation	<input checked="" type="checkbox"/> Synthesizer	<input type="checkbox"/> Crystal	<input type="checkbox"/> Other
Frequency generation TX			
Frequency generation RX			
IF	1st IF	2nd IF	3rd IF
Integral selective calling			
Audio-frequency interface level at external data socket			
Modes of operation	<input type="checkbox"/> Duplex mode	<input type="checkbox"/> Semi-duplex mode	<input checked="" type="checkbox"/> Simplex mode
Power source	<input checked="" type="checkbox"/> Mains	<input type="checkbox"/> Vehicle-regulated	<input type="checkbox"/> Integral
Antenna socket	<input type="checkbox"/> BNC <input type="checkbox"/> M <input checked="" type="checkbox"/> None	<input type="checkbox"/> TNC <input type="checkbox"/> UHF <input type="checkbox"/>	<input type="checkbox"/> N <input type="checkbox"/> Adapter <input type="checkbox"/>
Test specifications: FCC Part 15 C RSS 210			

Declarations:

- We declare that the above information are correct and the named model was supplied with the maximum configuration to the accredited test laboratory.

System Setup for FCC/IC - Tests

Antenna type TX	Frequency	PDA Settings TX-Power	PSU – Cable
Liberty CFX	8.2 MHz	21	PS WW 425 - IMX 04 PS Globtek, GT-2S5024D-R - Standard mains cable
	9.5 MHz	24	PS WW 425 - IMX 04 PS Globtek, GT-2S5024D-R - Standard mains cable

Cables/Connections:

AC-Cable(to PSU): WW425 PSU require shielded filter cordset Eupen IMX 04.

Globtek PSU require standard mains cable.

DC-Cable: Shield not connected to TR4024-Electronic, with 4 turns of clip-on Ferrite.

Sync-Cables: Both Slave IN & Slave Out cables (each 14' length) connected, bundled, and terminated into 100 Ohm ¼ W resistance load. Communications cables not connected, because Liberty CFX will not be networked.

Connecting the sync – cables to the electronic has a negative effect to the spurious emission, but it doesn't influence the Transmitter power.

Detection Height (distance between Liberty CFX antenna and 410 tag) was between 1 - 2 m

Optional: A regulatory compliant Remote Transmitter PCB could be connected to Light Output port J2 on TR4024-Electronic; which transmits alarms to a remote accessory receiver.
