Hi, Tom.

Finally I got the correct info on pulse train plot (mixed up with others) and revised the report. Also send you the revised manual. I think these will be the last thing for approval.

Thanks again for your patient.

Wei

Dear Wei Li,

I have reviewed the referenced application and have the following questions:

1. Please submit a signed authorization letter from the applicant naming you or your company as their agent. The date on the letter must be less than one year old.
2. Please submit a transmitter output spectrum analyzer plot showing the entire 139 msec burst, and include markers to show the beginning and end points of the 100 msec period during which the field strength is at its maximum value. If necessary please re-calculate and submit the total ON time, duty cycle, and field strength values.
3. There was no letter requesting confidentiality for block diagram, schematic diagram and theory of operation. If you want these exhibits to be kept from public inspection, please submit a confidentiality request letter per 0.457 and 0.459 of the Rules, otherwise these exhibits will be available for public inspection on the FCC website
4. Please provide a modified user manual with the information required by section 15.21 of the Rules

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.

Thanks a lot !

The letters were uploaded to the site already. I attach them again here.

Regards,

Wei
