

(11) RF Exposure DZLA00023

Compliance with 47 CFR 15.247(i)

“Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines. See § 1.1307(b)(1) of this chapter.”

The EUT is a wireless headset that allows cordless communication of speech and music between a source and the unit. It can be considered a portable transmitter per 47 CFR 2.1093 because it is intended to be worn on the head, within 2.5cm of the user. The antenna is internal to the unit and permanently attached. The antenna is a monopole quarter wavelength antenna with 3.90 dBi gain. The maximum peak conducted output power is 1.44mW.

The maximum peak power is 3.53mW (EIRP) for FCC ID: DZLA00023. The transmit frequency is 2405 to 2477 MHz, therefore the EUT does not require routine SAR evaluation because it falls below the low power threshold of $60/f(\text{GHz})\text{mW}$. Please see this excerpt from KDB 447498D01 Mobile Portable RF Exposure v04, item 2)(a)(i):

"a device may be used in portable exposure conditions with no restrictions on host platforms when either the source-based time-averaged output power is $\leq 60/f(\text{GHz})\text{mW}$ or all measured 1-g SAR are $< 0.4 \text{ W.kg.}$ "

The applicant's wireless radio, FCC ID: DZLA00023, is compliant with the requirements of 15.247(i).
