Prediction of MPE limit at a given distance

Equation from page 18 of OET Bulletin 65, Edition 97-01

$$S = \frac{PG}{4\pi R^2}$$

where: S = power density

P = power input to the antenna

G = power gain of the antenna in the direction of interest relative to an isotropic radiator

R = distance to the center of radiation of the antenna

Maximum peak output power at the antenna terminal:	9.62	(dBm)
--	------	-------

Maximum peak output power at the antenna terminal:	9.162204901	(mW)
--	-------------	------

Antenna gain(typical):	-0.47	(dBi)
------------------------	-------	-------

Maximum antenna gain:	0.897428795	(numeric)
-----------------------	-------------	-----------

Prediction distance:	20	(cm)
----------------------	----	------

Prediction frequency:	2450	(MHz)
-----------------------	------	-------

MPE limit for uncontrolled exposure at prediction frequency:	1	(mW/cm^2)
--	---	-----------

Power density at prediction frequency:	0.001636	(mW/cm^2)
--	----------	-----------

Therefore device complies with FCC RF radiation exposure limits

for general population in mobile exposure category (distance > 20cm)
