

Dennis Ward,

Question # 1:

The document “OEM Regulatory Notices” is what Intel Corporation sends the OEM integrator of the WM3A2100 this does not go to the user.

The document “Users Manual Regulatory – WLAN.pdf” is what Dell sends the end user due to the fact they have completed SAR testing to allow them to call out the closer proximity of the WLAN antenna to the user.

Question # 2 & 3:

The SAR testing was completed at a higher output power to give the most conservative SAR, we are not wanting to list the SAR output power on the FCC Grant as we know that the output power must be within 5% this is why the EMC testing was completed to include conducted data showing output power within the 5%.

The other 3 questions will be answered by Stuart Nicol of Aprel Laboratories.

Thank you,

Robert Paxman
Compliance Engineer
Wireless Networking Division
Intel Corporation
