Suite C110
McLean, VA 22101

To Whom It May Concern:

This letter is to attest that during SAR measurements taken on 1 April 2003 with the Intel Pro/Wireless 2100 WLAN Mini-PCI Type 3A Adapter by Aprel Laboratories the Intel model number WM3A2100 was not in saturation at the output power of 17.8dBm with 100% duty cycle. This higher output power level was used for the most conservative SAR.

This device will only be manufactured and shipped with the maximum output power or less of what is listed on the FCC Grant and listed in the EMC FCC Part 15 Subpart C test report issued by Aegis Labs. This output power setting is flashed into the EEPROM during calibration, this is not accessible and can not be changed by the end user.

Thank you for your attention to this matter.

If you have any further questions or need additional information, please feel free to give me a call at 805-376-9300.

Sincerely,

A handwritten signature in black ink that reads "Robert W. Paxman". The signature is written in a cursive style and is positioned above a horizontal line.
