

**Equipment**: Tablet Computer

Brand Name : Dell Model No. : J42A

FCC ID : E2KJ42A

Standard : 47 CFR FCC Part 15.407

Applicant : Dell

Manufacturer One Dell Way, Round Rock, Texas 78682,

U.S.A.

**DFS Operate Mode: Client without radar detection** 

The product sample received on Sep. 12, 2012 and completely tested on Oct. 06, 2012. We, SPORTON, would like to declare that the tested sample has been evaluated in accordance with the procedures given in FCC 06-96 Appendix and shown compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of SPORTON INTERNATIONAL INC., the test report shall not be reproduced except in full.

#### **General Description** 1

#### 1.1 Information

### 1.1.1 RF General Information

RF General Information					
Frequency Range (MHz)	IEEE Std. 802.11 Protocol	Ch. Frequency (MHz)	Channel Number		
5150-5250		5180-5240	36-48 [4]		
5250-5350	а	5260-5320	52-64 [4]		
5470-5725		5500-5700	100-140 [7]		
5150-5250	n (HT20)	5180-5240	36-48 [4]		
5250-5350		5260-5320	52-64 [4]		
5470-5725		5500-5700	100-140 [7]		
5150-5250	n (HT40)	5190-5230	38-46 [2]		
5250-5350		5270-5310	54-62 [2]		
5470-5725		5510-5670	102-134 [3]		

**Report No.: FZ291203** 

Note 1: IEEE Std. 802.11-2007 modulation consists of IEEE Std. 802.11a-1999.

Note 2: IEEE Std. 802.11n-2009 modulation consists of HT20 and HT40 (HT: High Throughput). Then EUT support HT20 and HT40.

Note 3: 20dB bandwidth not falls completely or partly within the 5600 MHz to 5650 MHz band. Following channel frequencies could not be used for 5600 MHz to 5650 MHz band:

20MHz mode [MHz]: 5600, 5620, 5640

40MHz mode [MHz]: 5590, 5630

## 1.1.2 Antenna Information

	Antenna Category							
$\boxtimes$	Integral antenna (antenna permanently attached)							
	$\boxtimes$	Temporary RF connector provided						
		No temporary RF connector provided Transmit chains bypass antenna and soldered temporary RF connector provided for connected measurement. In case of conducted measurements the transmitter shall be connected to the measuring equipment via a suitable attenuator and correct for all losses in the RF path.						

Report No.: FZ291203

	Antenna General Information								
Ant. No.	PL	Ant. Port [Ant No. X connect to Ant. Port Y]	Ant. Cat.	Ant. Type	Manufacturer:	Part No.	G <sub>ANT</sub>	DG (dBi) [correlated] N <sub>TX</sub> = 1	DG (dBi) [uncorrelated] N <sub>TX</sub> = 2
1	1	1	Integral	PIFA	TE connectivity	1556553-1	-1.28	-1.28	N/A

For radiated tests, the DFS test should be performed with lowest antenna gain (regardless of antenna type). Then Ant. No. 1 shall be performed the radiated DFS test.

# 1.2 Support Equipment

	Support Equipment					
No.	Equipment	Brand Name	Model Name	FCC ID		
1	AP (Master)	3Com	WL-605	O9C-WL605		
2	Notebook PC	Dell	Latitude E5510	DoC		

**Report No.: FZ291203** 

# 1.3 Testing Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

- FCC 06-96 Appendix
- FCC KDB 905462 5 GHz UNII DFS Compliance Procedures
- FCC KDB 443999 Approval of DFS UNII Devices

# 1.4 Testing Location Information

	Testing Location							
$\boxtimes$	HWA YA	YA ADD : No. 52, Hwa Ya 1st Rd., Hwa Ya Technology Park, Kwei-Shan Hsiang, Tao Yuan Hsien, Taiwan, R.O.C						
		TEL: 886-3-327-3456 FAX: 886-3-327-0973						
Test Condition Test Site No.		Test Engineer	Test Environment	Test Date				
	DFS Site			DF01-HY	Cain	23.5°C / 51%	5-Oct12 ~ 6-Oct12	

# 1.5 Measurement Uncertainty

ISO/IEC 17025 requires that an estimate of the measurement uncertainties associated with the emissions test results be included in the report. The measurement uncertainties given below are based on a 95% confidence level (based on a coverage factor (k=2)

Measurement	Uncertainty	
Test Item	Uncertainty	Limit
Radio frequency	± 8.7 X 10 <sup>-7</sup>	N/A
RF output power, conducted	±0.63 dB	N/A
All emissions, conducted	±0.83 dB	N/A
All emissions, radiated	±2.87 dB	N/A
Temperature	±0.8 °C	N/A
Humidity	±3 %	N/A
DC and low frequency voltages	±3 %	N/A
Time	±1.42 %	N/A

# 3 Dynamic Frequency Selection (DFS) Test Result

## 3.1 General DFS Information

#### 3.1.1 DFS Parameters

Table D.1: DFS requirement values				
Parameter	Value			
Non-occupancy period	Minimum 30 minutes			
Channel Availability Check Time	60 seconds			
Channel Move Time	10 seconds See Note 1.			
Channel Closing Transmission Time	200 milliseconds + an aggregate of 60 milliseconds over remaining 10 second periods. See Notes 1 and 2.			
U-NII Detection Bandwidth	Minimum 80% of the 99% power bandwidth See Note 3.			

Report No.: FZ291203

- Note 1: The instant that the *Channel Move Time* and the *Channel Closing Transmission Time* begins is as follows:
  - For the Short pulse radar Test Signals this instant is the end of the *Burst*.
  - For the Frequency Hopping radar Test Signal, this instant is the end of the last radar *Burst* generated.
  - For the Long Pulse radar Test Signal this instant is the end of the 12 second period defining the radar transmission.
- Note 2: The *Channel Closing Transmission Time* is comprised of 200 milliseconds starting at the beginning of the *Channel Move Time* plus any additional intermittent control signals required to facilitate *Channel* changes (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.
- Note 3: During the *U-NII Detection Bandwidth* detection test, radar type 1 is used and for each frequency step the minimum percentage of detection is 90%. Measurements are performed with no data traffic

Table D.2: Interference threshold values				
Maximum Transmit Power Value (see note)				
≥ 200 milliwatt	-64 dBm			
< 200 milliwatt	-62 dBm			

Note 1: This is the level at the input of the receiver assuming a 0 dBi receive antenna.

Note 2: Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.

SPORTON INTERNATIONAL INC. : 9 of 21
TEL: 886-3-327-3456 : Report Version : Rev. 01

# 3.1.2 Applicability of DFS Requirements Prior to Use of a Channel

		DFS Operational mode					
Requirement	Master	Client without radar detection	Client with radar detection				
Non-Occupancy Period	Yes	Not required	Yes				
DFS Detection Threshold	Yes	Not required	Yes				
Channel Availability Check Time	Yes	Not required	Not required				
Uniform Spreading	Yes	Not required	Not required				
U-NII Detection Bandwidth	Yes	Not required	Yes				

Report No.: FZ291203

# 3.1.3 Applicability of DFS Requirements during Normal Operation

	DFS Operational mode					
Requirement	Master	Client without radar detection	Client with radar detection			
DFS Detection Threshold	Yes	Not required	Yes			
Channel Closing Transmission Time	Yes	Yes	Yes			
Channel Move Time	Yes	Yes	Yes			
U-NII Detection Bandwidth	Yes	Not required	Yes			

## 3.1.4 User Access Restrictions

# User Access Restrictions DFS controls (hardware or software) related to radar detection are NOT accessible to the user. Manufacturer statement confirming that information regarding the parameters of the detected Radar Waveforms is not available to the end user.

## 3.1.5 Channel Loading/Data Streaming

$\boxtimes$	IP Based (Load Based) - stream the test file from the Master to the Client.
	Performed NTIA approved WAV file. (EUT w/o video function application)
	☐ Performed NTIA approved MPEG2 file. (EUT with video function application)
	Alternative streaming e.g., FTP with about 17 to 20% loading and submit proposal to FCC.
	Frame Based - stream the test file from the Master to the Client.
	fixed talk/listen ratio, set the ratio to 45%/55%

SPORTON INTERNATIONAL INC. Page No. : 10 of 21 TEL: 886-3-327-3456 Report Version : Rev. 01

## 3.2 Radar Test Waveform Calibration

#### 3.2.1 Short Pulse Radar Test Waveforms

Radar Type	Pulse Width (µsec)	PRI (μsec)	Number of Pulses	Minimum Percentage of Successful Detection	Minimum Trials
1	1	1428	18	60%	30
2	1-5	150-230	23-29	60%	30
3	6-10	200-500	16-18	60%	30
4	11-20	200-500	12-16	60%	30
Aggrega	te (Radar Types 1-4	.)		80%	120

**Report No.: FZ291203** 

A minimum of 30 unique waveforms are required for each of the short pulse radar types 2 through 4. For short pulse radar type 1, the same waveform is used a minimum of 30 times. If more than 30 waveforms are used for short pulse radar types 2 through 4, then each additional waveform must also be unique and not repeated from the previous waveforms. The aggregate is the average of the percentage of successful detections of short pulse radar types 1-4.

## 3.2.2 Long Pulse Radar Test Waveform

Radar Type	Pulse Width (µsec)	Chirp Width (MHz)	PRI (µsec)	Number of Pulses per <i>Burst</i>	Number of Bursts	Minimum Percentage of Successful Detection	Minimum Trials
5	50-100	5-20	1000-2000	1-3	8-20	80%	30

Each waveform is defined as follows:

- The transmission period for the Long Pulse Radar test signal is 12 seconds.
- There are a total of 8 to 20 Bursts in the 12 second period, with the number of Bursts being randomly chosen. This number is Burst\_Count.
- Each Burst consists of 1 to  $\overline{3}$  pulses, with the number of pulses being randomly chosen. Each Burst within the 12 second sequence may have a different number of pulses.
- The pulse width is between 50 and 100 microseconds, with the pulse width being randomly chosen. Each pulse within a Burst will have the same pulse width. Pulses in different Bursts may have different pulse widths.
- Each pulse has a linear FM chirp between 5 and 20 MHz, with the chirp width being randomly chosen. Each pulse within a Burst will have the same chirp width. Pulses in different Bursts may have different chirp widths. The chirp is centered on the pulse. For example, with a radar frequency of 5300 MHz and a 20 MHz chirped signal, the chirp starts at 5290 MHz and ends at 5310 MHz.
- If more than one pulse is present in a Burst, the time between the pulses will be between 1000 and 2000 microseconds, with the time being randomly chosen. If three pulses are present in a Burst, the time between the first and second pulses is chosen independently of the time between the second and third pulses.
- The 12 second transmission period is divided into even intervals. The number of intervals is equal to Burst\_Count. Each interval is of length (12,000,000 / Burst\_Count) microseconds. Each interval contains one Burst. The start time for the Burst, relative to the beginning of the interval, is between 1 and [(12,000,000 / Burst\_Count) (Total Burst Length) + (One Random PRI Interval)] microseconds, with the start time being randomly chosen. The step interval for the start time is 1 microsecond. The start time for each Burst is chosen independently.

SPORTON INTERNATIONAL INC. Page No. : 11 of 21 TEL: 886-3-327-3456 Report Version : Rev. 01

## 3.2.3 Frequency Hopping Radar Test Waveform

Radar Type	Pulse Width (µsec)	PRI (µsec)	Pulses per Hop	Hopping Rate (kHz)	Hopping Sequence Length (ms)	Minimum Percentage of Successful Detection	Minimum Trials
6	1	333	9	0.333	300	70%	30

**Report No.: FZ291203** 

The FCC Type 6 waveform uses a static waveform with 100 bursts in the instruments ARB. In addition, the RF list mode is operated with a list containing 100 frequencies from a randomly generated list and it had be ensured that at least one of the random frequencies falls into the UNII Detection Bandwidth of the DUT. Each burst from the waveform file initiates a trigger pulse at the beginning that switches the RF list from one item to the next one.

## 3.2.4 Master DFS Threshold Level

Master DFS Threshold Level				
DFS Threshold level: -62 dBm	at the antenna connector			
	in front of the antenna			
The Interference Radar Detection Thr been taken into account the master out	reshold Level is (-64dBm) + (2 [dBi] ) + {1 dB}= -62 dBm. That had put power range and antenna gain.

# 3.3 In-service Monitoring

## 3.3.1 In-service Monitoring Limit

	In-service Monitoring Limit				
Channel Move Time	10 sec				
Channel Closing Transmission Time	200 ms + an aggregate of 60 ms over remaining 10 sec periods.				
Non-occupancy period	Minimum 30 minutes				

Report No.: FZ291203

## 3.3.2 Measuring Instruments

Refer a test equipment and calibration data table in this test report.

#### 3.3.3 Test Procedures

#### **Test Method**

- Refer as FCC 06-96 Appendix, clause 7.8.3 verified during In-Service Monitoring; Channel Closing Transmission Time, Channel Move Time. Client Device will associate with the EUT. Observe the transmissions of the EUT at the end of the radar Burst on the Operating Channel for duration greater than 10 seconds. Measure and record the transmissions from the EUT during the observation time (Channel Move Time). Compare the Channel Move Time and Channel Closing Transmission Time limits.
- Refer as FCC 06-96 Appendix, clause 8.3 verified during In-Service Monitoring; Channel Closing Transmission Time, Channel Move Time. One 10 sec plot needs to be reported for the Short Pulse Radar Types 1-4 and one for the Long Pulse Radar Type in a 22 sec plot. And zoom-in a 600 ms plot verified channel closing time for the aggregate transmission time starting from 200ms after the end of the radar signal to the completion of the channel move.
- Refer as FCC 06-96 Appendix, clause 7.8.3 verified during In-Service Monitoring; Non-Occupancy Period. Client Device will associate with the EUT. Observe the transmissions of the EUT at the end of the radar Burst on the Operating Channel for duration greater than 10 seconds. Measure and record the transmissions from the EUT during the observation time (Non-Occupancy Period). Compare the Non-Occupancy Period limits.
