

Standalone SAR test exclusion considerations

September 23, 2014

- Device category = Portable device Mobile device
- Max. transmitting frequency = 2480 MHz
- Min. test separation distance = 0 mm
- Max. power with turn-up tolerance = 8.00 dBm = 6.4 mW
Typical Power = Max. 8.00 dBm
- Max. Antenna Gain = 1.7 dBi

KDB 447498 D01 clause 4.3.1 Step 1) SAR test exclusion thresholds for 100MHz to 6GHz at test separation distances ≤ 50 mm

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$ for 1g SAR and ≤ 7.5 for 10g extremity SAR
 $= [(6.4\text{mW} / 5\text{mm})] \times [\sqrt{2.48\text{GHz}}] = 2$

Note. The calculation result was rounded to one decimal place for comparison.

→ SAR evaluation for general population exposure conditions by measurement or numerical simulation is not required.
