Hi Barry:

Here is my response to your issues:

1. Has been resolved as per your email to me April 25, 2002
2. I have attached a revised confidentiality request letter.
3. The label is made of "silver-plated T3 monocron:
4. I have attached a revised manual which includes the 15.21 statement.

Thanks,
Ruby

Hi Ruby,

We have these issues following our review:

1. A biconilog antenna was used for 27 MHz testing. We have asked the FCC if they will allow this technique or if they require use of a shielded loop antenna below 30MHz.
2. Please explain why the confidentiality request letter refers to "satellite broadcast receiver". It also only requests that the block diagram be held confidential.
3. Please supply details of the label material.
4. The 15.21 statement does not appear to be in the manual.

Best regards
