Columbia, MD 21046

Dear FCC Representative,

The difference between the PCMCIA and the PCI card is that the PCI Card has a chip for conversion from the PCMCIA to the PCI interface. This difference does not affect the processing gain measurement. The Samsung Electro Mechanics, PCI and the PCMCIA designs are based on the original design from Harris. The processing gain performed on the PCMCIA Card and the PCI Card will be the same.

Sincerely,

John Seo  
Samsung Electro-Mechanics Co.
