RE: FCC ID: E5MDS-ENETL2W_ATCB001375

Attention: Juan Martinez

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that a device used in line that does not directly radiate rf energy is not certified. This device is said to connect from an rf module to a duplexer. However, it is not made clear what the function of this duplexer is (i.e. does it switch the rf output of this device to multiple antennae or does it switch the rf output to other active system input ports and not to an antenna?). If the later is true, then the device would not be certified as it would not be classified as a transmitter or amplifier connecting to an antenna or other radiating source. If the former is true, then the duplexer would have to be clearly defined and identified in the documentation and in the grant notes of the device certificate. Please explain the function of the duplex operation. If this is a certifiable device, please include a diagram of how this device connects directly to a radiated element via the duplexer.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
