Fremont, CA. 94538*

To whom it may concern:

The enclosed documents constitute a formal submittal and application for a Class II Permissive Change for a PCS Licensed Transmitter module pursuant to the following rules:

Part 90 of FCC Rules

For Industry Canada certification, documentation showing the new label and attestation letters from the company with the existing verification and the company requesting the addition of their own model number to the existing listing have been provided. Please note that the RSP-100 report cover page information is taken from the original listing.

This device is currently approved for Part 24 and 101 use. This application is to add part 90 operation. The characteristics of the device for Part 24 and 101 are unaffected by this change other than to reduce the spurious emissions which resulted in a C1PC.

National Technical Systems – Silicon Valley, as duly authorized agent prepared this submittal. A copy of the letter of our appointment as agent is included with the application.

If there are any questions or if further information is needed, please contact National Technical Systems – Silicon Valley for assistance.

Sincerely,

David W. Bare  
Chief Engineer
