To whom it may concern:

The enclosed documents constitute a formal submittal and application for a Class II Permissive change for a licensed radio operating in the 216-222 MHz bands pursuant to the following rules:

Parts 80, 90 and 95 of FCC Rules (CFR 47)

The EUT was modified to replace metal tape used between the RF shield and the power amplifier (PA) with a shield over the PA and no tape between the PA and the RF shield. The tape was added during original certification testing to control the transmitter spurious emissions. Since the tape was removed and a new shield was placed over the PA, new transmitter spurious emissions were performed to verify the product continues to comply with FCC rules for transmitter spurious emissions. Since the emissions were higher than originally reported, a Class II Permissive change is being filed. The change would not affect the receiver emissions, so these have not been repeated for this application. In addition, this application is requesting addition of Parts 80 and 95 to the FCC grant with technical parameters detailed in the application form.

Elliott Laboratories, as duly authorized agent prepared this submittal. A copy of the letter of our appointment as agent is included with the application.

If there are any questions or if further information is needed, please contact Elliott Laboratories for assistance.

Sincerely,

A handwritten signature in black ink that reads "David W. Bare".

David W. Bare
Chief Engineer
