Re: Pre-amplifier option for a 60 watt cellular RF amplifier

Applicant: Powerwave Inc.

FCC ID: E675JS0026 (type acceptance for 60 watt amplifier)

Dear Frank,

In response to a customer requirement, Powerwave has developed a pre-amplifier for use with their 60 watt cellular power amplifier. This pre-amp is not sold stand-alone and is for use as an option only for the 60 watt amplifier whose FCC ID is listed above. The amplifier is used in its most linear operating region:

Gain: 20 dB
Output (max): 0 - 0.7 dBm
Frequency Range: 869 - 894 MHz

Ten pages of data and spectrum analyzer plots are presented to document the pre-amplifier's performance with respect to type acceptance requirements. Tests were performed for input signals with the following modulations:

| TDMA | CDMA | AMPS (Narrowband) | AMPS (Wideband) |
|------|------|-------------------|-----------------|
|------|------|-------------------|-----------------|

Occupied bandwidth compliance (2.989) is demonstrated by plotting input signal and output signal for each type of modulation, and comparing -20 dBc spectrum widths. IM response of the pre-amplifier (2.991) was demonstrated by combining two independent signals at the input of the pre-amplifier and measuring spurious emissions in the output spectrum. The two frequencies were chosen so as to produce both in-band and out-of-band modulation products. Finally, case radiated emissions (2.993) were measured with a single tone input to the pre-amplifier, with the output terminated in 50 ohms.

Test results indicate the following:

- Occupied bandwidth is not measurably distorted (input /output BW for -20 dB almost identical)
- All spurious emissions well below - 13 dBm at output
- No radiated emissions detected within -20 dB of limits

**ADDENDUM TO FCC ID# E675JS0026
FCC CONFIRMATION #EA89771**

This addendum is to add a low power pre-amplifier to the above submittal.

EUT was set to maximum gain throughout testing.

2.985 RF POWER OUTPUT:
+0.7 dBm

2.989 OCCUPIED BANDWIDTH:

Shown in plots:

TDMA- plot 14 shows bandwidth @ 880MHz +0.7dBm
plot 15 shows input bandwidth to above @ -20.2dBm

CDMA- plot 3 shows bandwidth @ 880MHz +0.1dBm
plot 4 shows input bandwidth to above @ -20dBm

AMPS NARROW BAND-
plot 19 shows bandwidth @ 880MHz +0.3dBm
plot 20 shows input bandwidth to above @ -20.3dBm

AMPS WIDE BAND-
plot 24 shows bandwidth @ 880MHz +0.5dBm
plot 25 shows input bandwidth to above @ -20.2dBm

2.991 SPURIOUS EMISSIONS AT ANTENNA TERMINAL:

Shown in plots with 2 input signals @ 880MHz & 870MHz of -23.3dBm each.
Output power was measured at 0.0dBm +/- .01dBm.

Intermodulation products @ 880MHz & 890MHz(1 in band, 1 out of band).

TDMA- plots 11,12,13

CDMA- plots 8,9,10

AMPS NARROW BAND- plots 16,17,18

AMPS WIDE BAND- plots 21,22,23

2.993 FIELD STRENGTH OF SPURIOUS EMISSIONS:

22.917 Limits applied.

Spectrum analyzer B/Ws set to 30KHz.

Measured with 1 input signal of -19.9dBm.

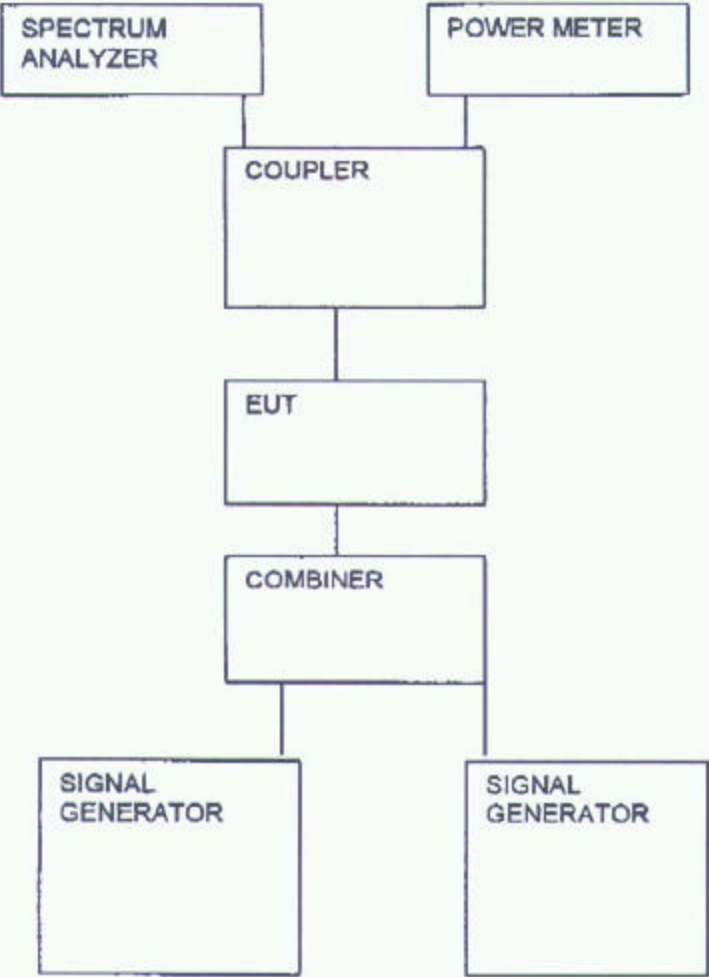

Output power was measured at 0.0dBm.

Fundamental frequencies of 870MHz, 880MHz & 890MHz.

Result: no emissions within 20dB of limits.

BLOCK DIAGRAM:

Measurements were offset for insertion loss of cables, attenuators, coupler and combiner.
