## 1 GENERAL INFORMATION

### 1.1 Product Description

<b>EUT Name: Multi-channel Power Amplifier</b>
<b>Model: G3S-800-150</b>

### 1.0 EUT Documentation

**1.1 EUT Description:** The G3S-800-150 is a linear, feed-forward power amplifier that operates in the 25 MHz frequency band from 869 MHz to 894 MHz. The amplifier can simultaneously transmit multiple frequencies, with better than -65 dBc third order intermodulation distortion (IMD). It is designed for use in an amplifier system that is modular in design, and is ideally suited for use in AMPS/TDMA/CDMA base stations. Each amplifier module has a status connector that allows the host system to monitor the amplifier module performance. The front panel of each amplifier module has unit level status/fault indicators and an RF on/off/reset switch. Primary power for the amplifier is +27 Vdc. Cooling for each plug-in amplifier module is provided by three fans, two mounted on the front and one on the rear of the module. The fans draw outside air through the front of the module and exhaust hot air out through the rear of the module.

#### 1.1.1 Components of EUT

Description	Model Number	Serial Number	FCC ID Number
Multi-channel Power Amplifier	G3S-800-150	--	E675JS0044

### 1.2 Operating modes:

The G3S-800-150 amplifier operates in the 869-894MHz frequency range at an average output power of 150W per module stand-alone. It is capable of amplifying multiple carriers of CDMA, TDMA, or AMPS modulated input signals. The amplifier does not provide any modulation of its own.

**1.3 EUT I/O Ports and Cables:**

**1.3.1 I/O Cables**

<b>CONNECTION:</b>	RF In
<b>SHIELD:</b>	Yes
<b>CONNECTORS:</b>	Metal
<b>TERMINATION TYPE:</b>	D-Subminiature
<b>LENGTH:</b>	Not specified
<b>REMOVABLE:</b>	Yes

DESCRIPTION:	<b>RF Attenuator / Load</b>
MANUFACTURER:	<b>Lucas Weinschel</b>
MODEL NUMBER:	<b>53-30-34</b>
SERIAL NUMBER:	<b>LN731</b>
FCC ID:	<b>N/A</b>

DESCRIPTION:	<b>RF Attenuator</b>
MANUFACTURER:	<b>Narda</b>
MODEL NUMBER:	<b>766-20</b>
SERIAL NUMBER:	<b>166</b>
FCC ID:	<b>N/A</b>

Report No. 9598-08 (FCC ID: E675JS0044)

1 GENERAL INFORMATION (continued)

**1.2 Related Submittal/Grant**

**None**

**1.3 Tested System Details**

The FCC IDs for all equipment, plus descriptions of all cables used in the tested system are:

None

#### 1.4 Test Methodology

Purpose of Test: To demonstrate compliance with the ANSI C63.4 setup.

- Test Performed:
- X 1. Conducted Emissions, FCC Part 2, Paragraphs 2.1049, and 2.1051 and Part 22, Paragraph 22.917
  - 2. Radiated Emissions EN55022: 1992 Class B limit, 30 - 1,000 MHz, 10 meters
  - X 3. Radiated Emission per FCC Part 2, Paragraph 2.1053, & Part 22, Paragraph 22.917
  - 4. Engineering evaluations
  - 5. Frequency Stability, Part 2, Paragraph 2.995, and Part 87, Paragraph 87.133
  - X 6. RF Output Power, 2.1046

Both Conducted and radiated testing were performed according to the procedures in FCC/ANSI C63.4 and CSA 108.8 - M1983. Radiated testing was performed at an antenna-to-EUT distance of 3 meters (1 - 10 GHz).

### 1.5 Test Facility

The open area test site and conducted measurement data were tested by:

TÜV PRODUCT SERVICE  
10040 Mesa Rim Road  
San Diego, CA 92121-2912  
Phone: 619 546 3999  
Fax: 619 546 0364

The Test Site Data and performance comply with ANSI 63.4 and are registered with the FCC, 7435 Oakland Mills Rd, Columbia Maryland 21046. All Measurement Data is acquired according to the content of FCC Measurement Procedure and ANSI C63.4, unless supplemented with additional requirements as noted in the test report.

**1.6 Part 2 Requirements**

**Frequency Range: 869 - 894 MHz**

**RF Power: 0 - 150W**

**Frequency Tolerance: N/A**

**Emission Designator: F1D, F8W, F9W, DXW**

**Microprocessor: N/A**

**Types of Emission: AMPS Voice, AMPS Wideband Data, TDMA, CDMA**

**Operating power range: 0 - 150 W**

**Maximum power rating: 150 W**

**Device is a power amplifier**

**Device is a power amplifier**

## **2. SYSTEM TEST CONFIGURATION**

### 2.1 Justification

The Multi-channel Power Amplifier, Model G3S-800-150 was initially tested for FCC emission in the following configuration:

See Block Diagram.

### 2.2 EUT Exercise Software

None

### 2.3 Special Accessories

None

### 2.4 Modification

None

### 2.5 Configuration of Tested System

See Block Diagram.

### **3 RADIATED EMISSION DATA**

The following data lists the significant emission frequencies, measured levels, correction factor (which includes cable and antenna corrections), the corrected reading, and the limit.

See following page(s).

See test setup photos for radiated emissions test setup.

### Field Strength Calculation

If a preamplifier was used during the Radiated Emission Testing, it is required that the amplifier gain must be subtracted from the Spectrum Analyzer (Meter) Reading. In addition, a correction factor for the antenna , cable used and a distance factor, if any, must be applied to the Meter Reading before a true field strength reading can be obtained. In the automatic measurement, these considerations are automatically presented as a part of the print out. In the case of manual measurements and for greater efficiency and convenience, instead of using these correlation factors for each meter reading, the specification limit was modified to reflect these correlation factors at each frequency value so that the meter readings can be compared directly to the modified specification limit. This modified specification limit is referred to as the "Corrected Meter Reading Limit" or simply the CMRL, which is the actual field strength present at the antenna. The quantity can be derived in the following manner:

$$\text{Corrected Meter Reading Limit (CMRL)} = \text{SAR} + \text{AF} + \text{CL} - \text{AG} - \text{DC}$$

Where, SAR = Spectrum Analyzer Reading

AF = Antenna Factor

CL = Cable Loss

AG = Amplifier Gain (if any)

DC = Distance Correction (if any)

Assume the following situation: A meter reading of 29.4 dBuV was obtained from a Class A computing device measured at 83 MHz. Assume an antenna factor of 9.2 dB, a cable loss of 1.4 dB and amplifier gain of 20.0 dB at 83 MHz. The final field strength would be determined as follows:

$$\text{CMRL} = 29.4 \text{ dBuV} + 9.2 \text{ dB} - 1.4 \text{ dB} - 20 \text{ dB/M} - 0.0 \text{ dB}$$

$$\text{CMRL} = 20.0 \text{ dBuV/M}$$

This result is well below the FCC and CSA Class A limit of 29.5 dbuV/m at 83 MHz.

For the manual mode of measurement, a table of corrected meter reading limit was used to permit immediate comparison of the meter reading to determine if the measure emission amplitude exceeded the specification limit at that specific frequency.

**5 SIGNATURE PAGE**

**GENERAL REMARKS:**

**SUMMARY:**

All tests according to the standards sited on page 1 of this report.

- Performed

- **Not** Performed

The Equipment Under Test

- **Fulfills** the general approval requirements cited on page 1.

- **Does not** fulfill the general approval requirements cited on page 1.

- TÜV PRODUCT SERVICE, INC. -

Responsible Engineer:

Mary Washington  
(EMC Engineer)
