Mike,  
In response to questions 2 and 3: the emissions you questioned, at 1997MHz, are fundamental emissions and are not subject to the -13dBm limit. Due to the spectral limitations of the spectrum analyzer, when using a large frequency span, the displayed marker frequency is not exact. During the block edge and output bandwidth measurements, all of the fundamental emissions were verified to be at the frequencies stated in the test report and are all within the licensed band for FCC part 24.

Regards,  
Pete Krebill

Notice\_content

-----  
Question #1: Please provide Operational Description and Tune-Up procedures.

Question #2: Page 29 of test report, out of band emission for EDGE modulation. 1997MHz is over the -13dBm limits. Please address this non-compliance emission.

Question #3: Page 38 of test report, out of band emission for GSM modulation. 1997Mhz is over the -13dBm limits. Please address this non-compliance emission.

Best Regards

Mike Kuo / TCB Certifier

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 60 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.
