

**POWERWAVE TECHNOLOGIES, INC. TEST REPORT  
FOR THE  
BOOSTER AMPLIFIER ASSEMBLY, OS-1933-E0-001  
FCC PART 24E  
TESTING**

**DATE OF ISSUE: NOVEMBER 7, 2008**

**PREPARED FOR:**

Powerwave Technologies, Inc.  
1801 E. St. Andrew Place  
Santa Ana, CA 92705

P.O. No.: 121217  
W.O. No.: 88265

**PREPARED BY:**

Mary Ellen Clayton  
CKC Laboratories, Inc.  
5046 Sierra Pines Drive  
Mariposa, CA 95338

Date of test: August 4-5, 2008

**Report No.: FC08-106**

This report contains a total of 40 pages and may be reproduced in full only. Partial reproduction may only be done with the written consent of CKC Laboratories, Inc. The results in this report apply only to the items tested, as identified herein.

## ADMINISTRATIVE INFORMATION

**DATE OF TEST:** August 4-5, 2008

**DATE OF RECEIPT:** August 4, 2008

**REPRESENTATIVE:** Carmine Fiorello

**MANUFACTURER:**

Powerwave Technologies, Inc.  
1801 E. St. Andrew Place  
Santa Ana, CA 92705

**TEST LOCATION:**

CKC Laboratories, Inc.  
110 Olinda Place  
Brea, CA 92823

**FREQUENCY RANGE TESTED:** 10 kHz-10 GHz

**TEST METHOD:** FCC Part 24E

**PURPOSE OF TEST:**

**Original Report:** To perform the testing of the Booster Amplifier Assembly, OS-1933-E0-001 with the requirements for FCC Part 24E devices.

**QUALITY ASSURANCE:**

A handwritten signature in black ink, appearing to read "Steve Behm".

Steve Behm, Director of Engineering Services

**TEST PERSONNEL:**

A handwritten signature in black ink, appearing to read "Stuart Yamamoto".

Stuart Yamamoto, Senior EMC Engineer

Out of Band Rejection		Pass

## CONDITIONS DURING TESTING

No modifications to the EUT were necessary during testing.

## EQUIPMENT UNDER TEST (EUT) DESCRIPTION

The customer declares the EUT tested by CKC Laboratories was representative of a production unit.

## EQUIPMENT UNDER TEST

### Booster Amplifier Assembly

Manuf: Powerwave Technologies, Inc.  
Model: OS-1933-E0-001  
Serial: NA  
FCC ID: pending

## PERIPHERAL DEVICES

The EUT was tested with the following peripheral device(s):

### Signal Generator (3 each)

Manuf: Agilent  
Model: E4433B  
Serial: US40051207, US40052093 &  
US40051852

### Amplifier Driver (3 each)

Manuf: Powerwave Technologies, Inc.  
Model: G3L-1929-160-001  
Serial: PD00000FUP, CL07080007 &  
CL07080003

### Laptop Computer

Manuf: HP  
Model: compaqnc60000  
Serial: CNUS1121KN

### DC Power Supply

Manuf: HP  
Model: 6683A  
Serial: US36420334

**TEMPERATURE AND HUMIDITY DURING TESTING**

The temperature during testing was within +15°C and + 35°C.  
The relative humidity was between 20% and 75%.

**FCC 2.1033(c)(3) USER'S MANUAL**

The necessary information is contained in a separate document.

**FCC 2.1033 (c)(4) TYPE OF EMISSIONS**

GXW, G7W, F9W

**FCC 2.1033 (c)(5) FREQUENCY RANGE**

1930MHz -1990MHz

**FCC 2.1033 (c)(6) OPERATING POWER**

145 Watts

**FCC 2.1033 (c)(8) DC VOLTAGES**

The necessary information is contained in a separate document.

**FCC 2.1033 (c)(9) TUNE-UP PROCEDURE**

The necessary information is contained in a separate document.

**FCC 2.1033(c)(10) SCHEMATICS AND CIRCUITRY DESCRIPTION**

The necessary information is contained in a separate document.

**FCC 2.1033(c)(11) LABEL AND PLACEMENT**

The necessary information is contained in a separate document.

**FCC 2.1033(c)(12) SUBMITTAL PHOTOS**

The necessary information is contained in a separate document.

**FCC 2.1033 (c)(13) MODULATION INFORMATION**

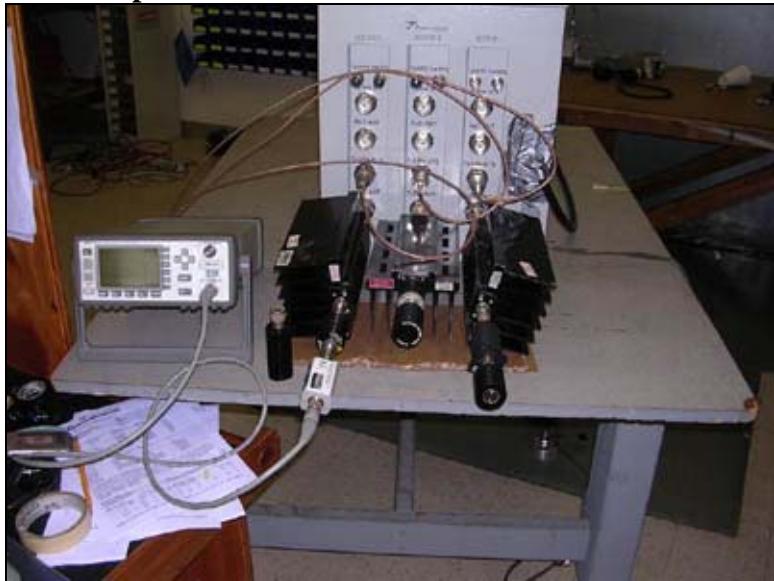

CDMA, EDGE, GSM, WCDMA

## FCC 2.1033(c)(14)/2.1046/24.232(a) - RF POWER OUTPUT

### Test Equipment

Equipment	Asset #	Manufacturer	Model #	Serial #	Cal Date	Cal Due
RF Power meter	02778	HP	EPM-441A	GB37170458	021508	021510

### Test Setup Photos

### Test Data

#### FCC Part 24.232(a) RF Output Power

The equipment under test (EUT) is a booster amplifier assembly. The manufacturer does not provide an antenna for sale with this product. The end user of this product is to exercise proper engineering judgment to select the appropriate antenna to comply with the EIRP limitation set forth by FCC 24.232(a)

The equipment under test (EUT) is placed stand alone on the table top. The EUT's three Tx1/BTS ports are connected to remotely located drive amplifiers. Three signal generators are providing the signal to the EUT through the three drive amplifiers. Two of the EUT's three Tx/Rx ANT ports are connected to high power attenuators then terminated with fifty ohm loads. One of the EUT's Tx/Rx ANT ports is connected to high power attenuators and then connected to the power meter. Temperature: 22C, Humidity: 48%, Pressure: 100kPa. Voltage to the EUT is 230Vac 60Hz.

The RF output power of the EUT was measured at the antenna port. The measured conducted output power meets the rated output power of this device.

**Part 24.232(a)**

Frequency (MHz)	Modulation	Power (dBm)	Power (Watts)
1931	GSM	+51.6	145
1960	GSM	+51.6	145
1989	GSM	+51.6	145
1931	EDGE	+51.6	145
1960	EDGE	+51.6	145
1989	EDGE	+51.6	145
1932	CDMA	+51.6	145
1960	CDMA	+51.6	145
1988	CDMA	+51.6	145
1933	WCMA	+51.6	145
1960	WCMA	+51.6	145
1987	WCMA	+51.6	145

Sec. 24.232 Power and antenna height limits.

(a) Base stations are limited to 1640 watts peak equivalent isotropically radiated power (EIRP) with an antenna height up to 300 meters HAAT, except as described in paragraph (b) below. See Sec. 24.53 for HAAT calculation method. Base station antenna heights may exceed 300 meters with a corresponding reduction in power; see Table 1 of this section. The service area boundary limit and microwave protection criteria specified in Sec. Sec. 24.236 and 24.237 apply.

Table 1--Reduced Power for Base Station Antenna Heights Over 300 Meters

HAAT in meters	Maximum EIRP watts
<= 300.....	1640
<= 500.....	1070
<= 1000.....	490
<= 1500.....	270
<= 2000.....	160

## FCC 2.1033(c)(14)/2.1049(i)- INPUT PLOTS

### Test Equipment

Equipment	Asset #	Manufacturer	Model #	Serial #	Cal Date	Cal Due
Spectrum Analyzer	02672	Agilent	E4446A	US44300438	072308	072309
Coaxial Cable	P02945	Astrolab	32022-2-2909K-36TC	(none)	091807	091809

### Test Conditions

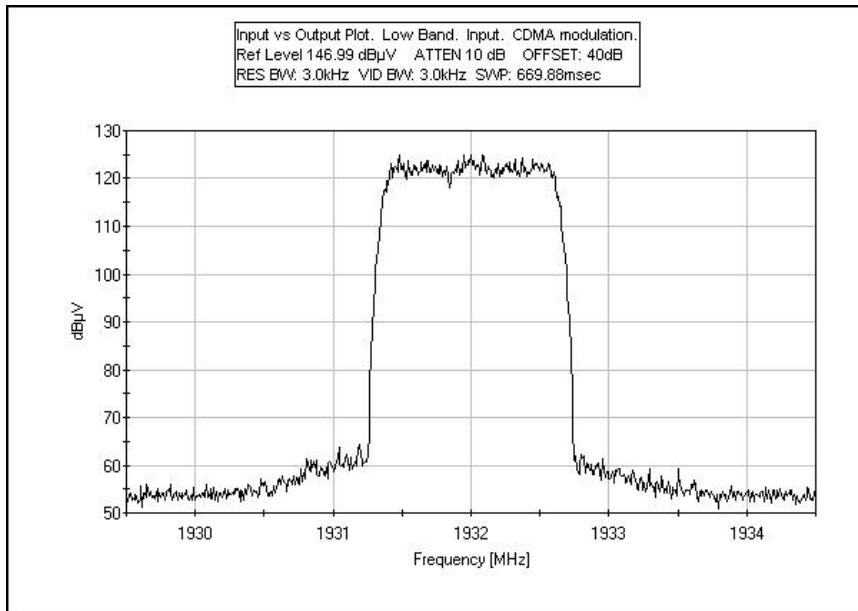

The equipment under test (EUT) is placed stand alone on the table top. One of the EUT's Tx1/BTS ports is connected to a remotely located drive amplifier. A signal generator is providing the signal to the EUT through the drive amplifier. For the input plot, the output of the drive amplifier is sent to the input of the spectrum analyzer through power attenuators. A plot of the input signal signature is made. For the output plot, one of the EUT's Tx/Rx ANT ports is connected to the input of the spectrum analyzer and a plot is made of the output signal signature. Temperature: 22°C, Humidity: 48%, Pressure: 100kPa. Voltage to the EUT is 230Vac 60Hz. Plots were made with the signal generator set to low, middle, and high channels using GSM, EDGE, CDMA, and WCDMA modulations. Output of the EUT is set to its rated output power of 51.6dBm. The frequency range tested was 1931MHz to 1989MHz. The operating range of the device tested is 1930MHz to 1990MHz. The actual operating frequencies of the device used were 1931MHz, 1960MHz, and 1989MHz for GSM and EDGE. The actual operating frequencies of the device used on this datasheet are 1932MHz, 1960MHz, and 1988MHz for CDMA. The actual operating frequencies of the device used on this datasheet are 1933MHz, 1960MHz, and 1987MHz for WCDMA. Bandwidth settings: SA RES BW=3kHz, SA VID BW=3kHz.

## Test Data

### Limit line for Spurious Conducted Emission

$$\underline{\text{Required Attenuation}} = \underline{43+10 \log P \text{ dB}}$$

$$\text{Limit line (dBuV)} = V_{\text{dBuV}} - \text{Attenuation}$$

$$\begin{aligned} V_{\text{dBuV}} &= 20 \log \frac{V}{1 \times 10^{-6}} \\ &= 20 (\log V - \log 1 \times 10^{-6}) \\ &= 20 \log V - 20 \log 1 \times 10^{-6} \\ &= 20 \log V - 20(-6) \\ &= 20 \log V + 120 \end{aligned}$$

$$\begin{aligned} \text{Attenuation} &= 43 + 10 \log P \\ &= 43 + 10 \log \frac{V^2}{R} \\ &= 43 + 10 (\log V^2 - \log R) \\ &= 43 + 10 (2 \log V - \log R) \\ &= 43 + 20 \log V - 10 \log R \end{aligned}$$

$$\begin{aligned} \text{Limit line} &= V_{\text{dBuV}} - \text{Attenuation} \\ &= 20 \log V + 120 - (43 + 20 \log V - 10 \log R) \\ &= 20 \log V + 120 - 43 - 20 \log V + 10 \log R \\ &= 20 \log V + 120 - 43 - 20 \log V + 10 \log R \\ &= 120 - 43 + 10 \log 50 \quad \text{Note : } R = 50 \Omega \\ &= 120 - 43 + 16.897 \\ &= 94 \text{ dBuV} \quad \text{at any power level} \end{aligned}$$

**Test Conditions / Notes:**

The equipment under test (EUT) is stand alone on the table top. All support equipment is located remote from the test site. Three signal generators along with three driver amplifiers are used to provide the three input signals to the EUT. The three outputs of the EUT are then routed to high power attenuators and loads. Temperature: 29°C, Humidity: 46%, Pressure: 100kPa. Output for the amplifier under test is set to the rated output power of 145.0 Watts (51.6dBm). Frequency range scanned and maximized, 9kHz to 20GHz. Operating range of the device under test is 1930MHz to 1990MHz. Bandwidth used 9kHz-20GHz = RBW=1MHz, VBW=8MHz. EDGE modulation: low (1931MHz), middle (1960MHz), and high (1989MHz). GSM modulation: low (1931MHz), middle (1960MHz), and high (1989MHz). CDMA modulation: low (1932MHz), middle (1960MHz), and high (1988MHz). WCDMA modulation: low (1933MHz), middle (1960MHz), and high (1987MHz).

**Test Conditions / Notes:**

The equipment under test (EUT) is stand alone on the table top. All support equipment is located remote from the test site. Three signal generators along with three driver amplifiers are used to provide the three input signals to the EUT. The three outputs of the EUT are then routed to high power attenuators and loads. Voltage to EUT is 230Vac 60Hz. Temperature: 29°C, Humidity: 46%, Pressure: 100kPa. One of the EUT's amplifiers is set to 1931MHz, another is set to 1960MHz, and the third one is set to 1989MHz. EDGE Modulation is being used for all signals. Output for each amplifier is set to the rated output power of 145.0 Watts (51.6dBm). Frequency range scanned and maximized, 9kHz to 20GHz. Operating range of the device under test is 1930MHz to 1990MHz. Bandwidth used 1GHz-20GHz = RBW=1MHz, VBW=8MHz; 30MHz-1GHz = RBW=120 kHz, VBW=120 kHz; 150kHz-30MHz = RBW=9 kHz, VBW=9 kHz; 9kHz-150kHz = RBW= 200 Hz, VBW=200 Hz.

### Test Equipment

Equipment	Asset #	Manufacturer	Model #	Serial #	Cal Date	Cal Due
Spectrum Analyzer	02672	Agilent	E4446A	US44300438	072308	072309
Coaxial Cable	P02945	Astrolab	32022-2-2909K-36TC	(none)	091807	091809

### Test Conditions

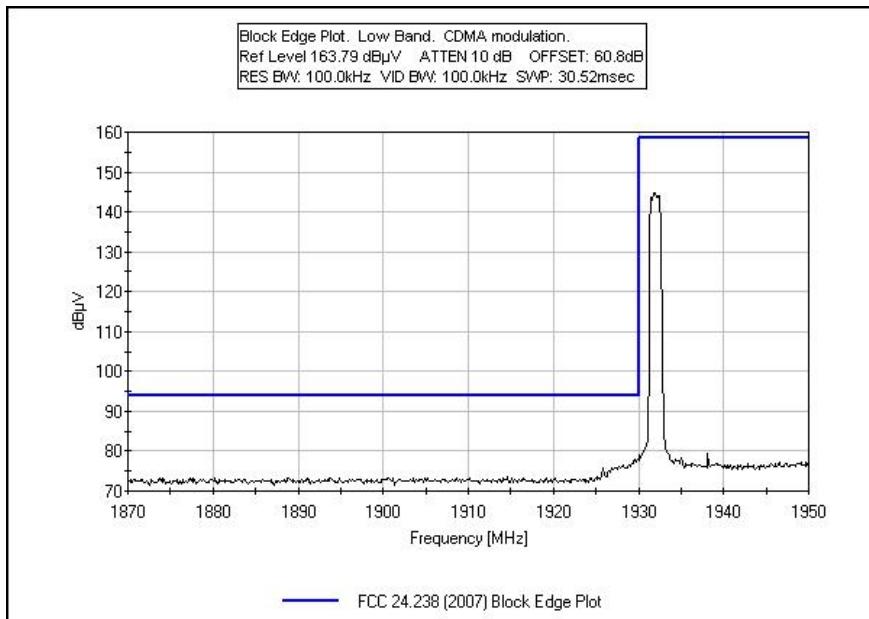

The equipment under test (EUT) is placed stand alone on the table top. One of the EUT's Tx1/BTS ports is connected to a remotely located drive amplifier. A signal generator is providing the signal to the EUT through the drive amplifier. One of the EUT's Tx/Rx ANT ports is connected to the input of the spectrum analyzer through high power attenuators and a plot is made. Temperature: 22°C, Humidity: 48%, Pressure: 100kPa. Voltage to the EUT is 230Vac 60Hz. Plots were made with the signal generator set to the low and high channels using GSM, EDGE, CDMA, and WCDMA modulations. Output of the EUT is set to its rated output power of 51.6dBm. The frequency range tested was 1931MHz to 1989MHz. The operating range of the device tested is 1930MHz to 1990MHz. The actual operating frequencies of the device used were 1931MHz and 1989MHz for GSM and EDGE. The actual operating frequencies of the device used on this datasheet is 1932MHz and 1988MHz for CDMA. The actual operating frequencies of the device used on this datasheet is 1933MHz and 1987MHz for WCDMA. Bandwidth settings: SA RES BW=100kHz, SA VID BW=100kHz. Note: A bandwidth correction factor was applied for the measurements performed with a RBW of 100kHz.

### Test Conditions

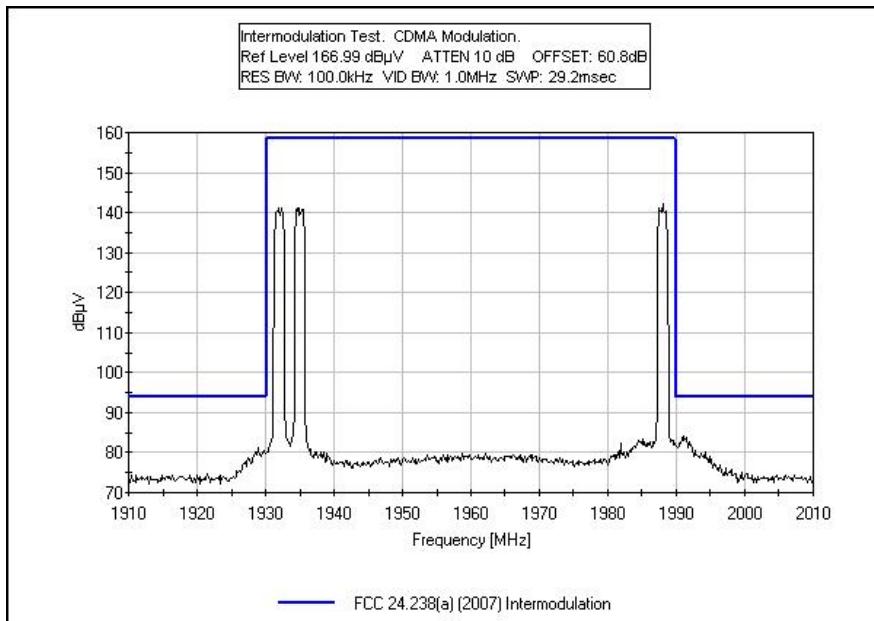

The equipment under test (EUT) is placed stand alone on the table top. One of the EUT's Tx1/BTS ports is connected to a three remotely located drive amplifiers. Three signal generators are providing the signals to the EUT through the drive amplifiers and combiner. For the intermodulation plots, one of the EUT's Tx/Rx ANT port was connected to the spectrum analyzer through high power attenuators and plots were made of the from 20MHz below the band to 20MHz above the band edge. Temperature: 22°C, Humidity: 48%, Pressure: 100kPa. Voltage to the EUT is 230Vac 60Hz. Plots were made with two signal generators set to the low band and one signal generator set to the high band using GSM, EDGE, CDMA, and WCDMA modulations. Output of the EUT is set to its rated output power of 51.6dBm. The frequency range tested was 1931MHz to 1989MHz. The operating range of the device tested is 1930MHz to 1990MHz. Bandwidth settings: SA RES BW=100kHz, SA VID BW=1MHz.

Spectrum Analyzer	02672	Agilent	E4446A	US44300438	072308	072309
Coaxial Cable	P02945	Astrolab	32022-2-2909K-36TC	(none)	091807	091809

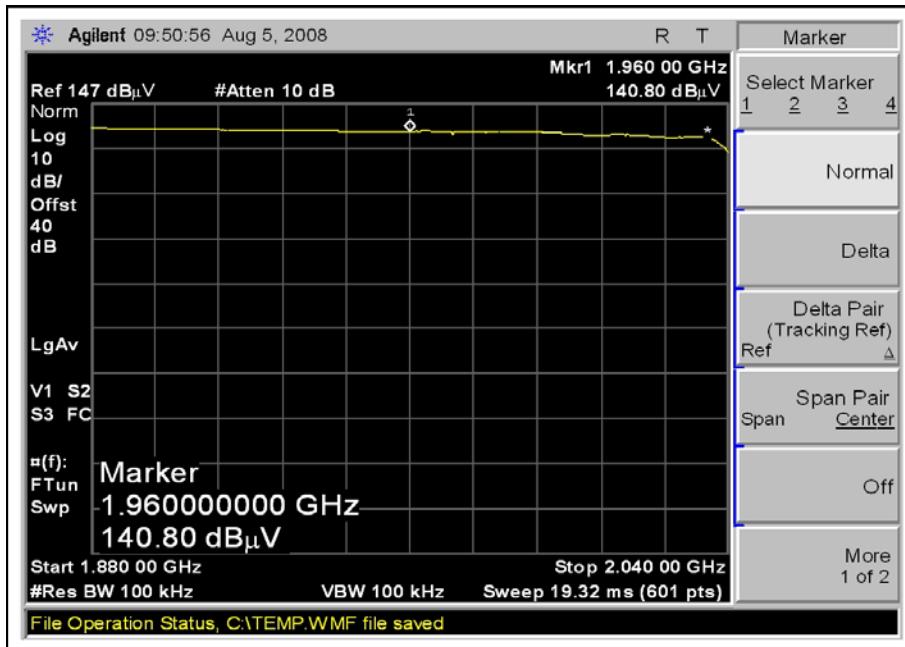

### Test Conditions

The equipment under test (EUT) is placed stand alone on the table top. For the input plot, the output of the drive amplifier was fed to the input of the spectrum analyzer through power attenuators. The signal generator providing the input to the drive amplifier was set to produce the rated output of the EUT when the drive amplifier is connected to the EUT. A signal generator was swept from 50MHz below the band to 50MHz above the band edge and a screen capture was made. For the output plot, the EUT's Tx/Rx ANT port was connected to the spectrum analyzer through high power attenuators. The signal generator providing the input to the drive amplifier was left at the same output as when the input plot was made. The signal generator was swept from 50MHz below the band to 50MHz above the band edge and a screen capture was made. Temperature: 22°C, Humidity: 48%, Pressure: 100kPa. Voltage to the EUT was 230Vac 60Hz. Plots were made with the signal generator set to sweep from 1880MHz to 2040MHz using no modulation. Output of the EUT is set to its rated output power of 51.6dBm. The frequency range tested was 1880MHz to 2040MHz. The operating range of the device tested is 1930MHz to 1990MHz. Bandwidth settings: SA RES BW=30kHz and 100kHz, SA VID BW=30kHz and 100kHz.
