Subject: Re: Question Regarding Contact Person for Documents on a Telit Module

Hi George,

My R&D team confirms this is average power, not the peak power for an instantaneous point in time. We calibrate these to the average seen across both bands and at multiple channels within a band (i.e., so its not a single calibration point) per the tolerance we list in the tune up.

Please let me know any further questions around this topic!

Regards,

Charlie Williams
