## 1.2 INTRODUCTION

The information contained within this report is intended to show verification of compliance of the Intermec Technologies Inc Intermec 730 Handheld Computer Terminal with 802.11b Radio Module co-located with a BTM210 Bluetooth Module to the requirements of FCC Specification Part 15.

FCC ID EHA-802CF13 & EHA-BTM210

## 1.3 LOCATION OF TESTING

TUV Product Service Engineers Matthew Larkin, Steve Hartley and Graham Lawler conducted all testing at the premises TUV Product Service, Segensworth Road, Fareham, Hampshire, PO15 5RH. Spurious Radiated Emissions measurements were performed in a 3 metre Anechoic Chamber. A complete site description is on file with the FCC Laboratory Division, Registration Number: 90987. See Annex A.

## 1.4 BRIEF SUMMARY OF RESULTS

A brief summary of the tests carried out is shown below.

Test	Spec Clause	Test Description	Result	Levels/Comments
2.1	FCC: Part 15.247(c)	Spurious Radiated Emissions	PASS	
2.2	FCC: Part 15.247(b)(3)	Maximum Peak Power Output (EIRP Method)	PASS	

## 1.5 PRODUCT INFORMATION

### 1.5.1 Technical Description

The Equipment Under Test (EUT) was a 730 Handheld Computer Terminal with a 802.11b Radio Module, which offers 2.4GHz Wireless connectivity with other 802.11b devices, and a BTM210 Bluetooth Radio, which offers 2.4GHz Wireless connectivity with other Bluetooth devices.

An Intermec Technologies 730 Handheld Computer Terminal was supplied as the host unit, this was used to control the EUT during test.

<b>Manufacturing Description:</b>	Intermec 730 Handheld Computer Terminal with 802.11b Radio Module
<b>Manufacturer:</b>	Intermec Technologies
<b>Model No:</b>	730
<b>Serial No:</b>	27910300035

### 1.5.2 Modes of Operation

The test software in the EUT enabled the Test Engineer to select full power and continuous transmit on the following channels;

#### 2.4GHz RLAN functionality

Bottom Channel:	2412MHz
Middle Channel:	2437MHz
Top Channel:	2462MHz

#### Bluetooth RLAN functionality

Bottom Channel:	2402MHz
Middle Channel:	2441MHz
Top Channel:	2480MHz

The EUT was set at the Maximum Output Power during testing.

**1.6 DEVIATIONS FROM THE STANDARD**

No deviations from the standard were made during testing.

**1.7 MODIFICATION RECORD**

No modifications were made to the test sample.

## 2.1 SPURIOUS RADIATED EMISSIONS - Continued

### 2.1.5 Test Procedure

Test Performed in accordance with ANSI C63.4.

A preliminary profile of the Spurious Radiated Emissions was obtained by operating the EUT on a remotely controlled turntable within a semi-anechoic chamber. Measurements of emissions from the EUT were obtained with the Measurement Antenna in both Horizontal and Vertical Polarisations. The profiling produced a list of the worst-case emissions together with the EUT azimuth and antenna polarisation.

Using the information from the preliminary profiling of the EUT. The list of emissions was then confirmed or updated under Alternative Open Site conditions. Emission levels were maximised by adjusting the antenna height, antenna polarisation and turntable azimuth.

Emissions identified within the range 30MHz – 1GHz were then formally measured using a CISPR Quasi-Peak detector.

The measurements were performed at a 3m distance unless otherwise stated.

The EUT was operating via the internal power supply of the Host.

Measurements were made with the EUT transmitting on the following channels.

	RLAN	BLUETOOTH
Configuration 1	2.480GHz	2.462GHz

Performed by J Holcombe, EMC Engineer.

## 2.2 MAXIMUM PEAK OUTPUT POWER (EIRP Method)

### 2.2.1 Specification Reference

FCC CFR 47: Part 15 Subpart C, Section 15.247(b)(3)

### 2.2.2 Equipment Under Test

Intermec 730 Handheld Computer Terminal with 802.11b Radio Module and Bluetooth Radio Module

### 2.2.3 Date of Test

10 – 12 December 2003

### 2.2.4 Test Equipment Used

The following major items of test equipment identified in Section 3.1 were used for the above tests.

Items 5 - 11
--------------

### 2.2.5 Test Procedure

Test Performed in accordance with FCC CFR 47: Part 15.247(b)(1).

The EUT contains an integral antenna and therefore the Maximum Peak Output Power was made using the EIRP method.

The Spectrum Analyser was tuned to the test frequency. The device Output Power setting was controlled as specified in the Product Information, Section 1.5 of this document. The device was then rotated through 360 degrees until the highest power level was observed in both horizontal and vertical polarisation. The device was then replaced with a substitution antenna, who's input signal level into the antenna was adjusted until the received level matched that of the previously detected emission.

Using previous EIRP results for the RLAN Module and the Bluetooth Module tested as individual transmitters, the sum of the individual EIRP results was taken. The test was only repeated if the sum of the EIRP measurements was within 5% of the limit as agreed with the TCB.

Performed by J Holcombe, EMC Engineer

### 2.2.6 Test Results

The sum of the individual EIRP measurements for the RLAN Module and the Bluetooth Module was not within 5% of the limit so measurements with the two modules transmitting simultaneously was not carried out.

The table below outlines the individual EIRP Measurements:

Channel	Module	EIRP (dBm)	Sum (dBm)	Limit (dBm)
Top	Bluetooth	-2.6	17.6	36.0
	RLAN	20.2

### 3.2 MEASUREMENT UNCERTAINTY

For a 95% confidence level, the measurement uncertainties for defined systems are:-

<b>IN THE FREQUENCY RANGE 30MHz TO 1000MHz</b>		
<b>TEST</b>	<b>FREQUENCY</b>	<b>AMPLITUDE</b>
For Radiated Emissions, Quasi-Peak Measurements taken in Zero Span using the Hewlett Packard EMI Receiver and Bilog Antenna	$\pm 2 \times 10^{-7}$ x Centre Frequency	5.15dB calculated in accordance with CISPR 16-4
<b>IN THE FREQUENCY RANGE 1GHz TO 25GHz</b>		
<b>TEST</b>	<b>FREQUENCY</b>	<b>AMPLITUDE</b>
For Spurious Radiated Emissions measurements	$\pm 2 \times 10^{-7}$ x Centre Frequency	$\pm 3.4$ dB
For Effective Radiated Power (ERP) measurements	Not Applicable	$\pm 1.45$ dBm

Gentlemen:

Your request for registration of the subject measurement facility has been reviewed and found to be in compliance with the requirements of Section 2.948 of the FCC rules. The information has, therefore, been placed on file and the name of your organization added to the list of facilities whose measurement data will be accepted in conjunction with applications for Certification under Parts 15 or 18 of the Commission's Rules. Please note that the file must be updated for any changes made to the facility and the registration must be renewed at least every three years.

Measurement facilities that have indicated that they are available to the public to perform measurement services on a fee basis may be found on the FCC website [www.fcc.gov](http://www.fcc.gov) under E-Filing, OET Equipment Authorization Electronic Filing, Test Firms.

Sincerely,

Thomas W Phillips  
Electronics Engineer
