**DESCRIPTION**

This 2.45 GHz ceramic multilayer antenna has been designed to meet the requirements of the Bluetooth™<sup>(1)</sup> and IEEE 802.11b/g wireless communications protocol. It consists of a rectangular block of low-dielectric ceramic material and is fabricated in a water-based non-toxic process. The antenna is capable of providing good connectivity using near 50 Ω microstrip directly onto the PC board.

<sup>(1)</sup> Bluetooth is a trademark owned by Telefonieaktiebolaget L M Ericsson, Sweden.

**ENVIRONMENTAL CARE**

The foil making process uses an environment-friendly aqueous-solvent technology that fully complies with today's green-product design requirements. All terminations are lead-free. Packing materials can be recycled.

## PACKING

## Tape and reel specifications

Tape and reel specifications are in accordance with "IEC 60286-3". Basic dimensions are given in Figs 7 and 8, and Tables 6 and 7.

## Peel-off force

Peel-off force of the blister tape is in accordance with "IEC 60286-3"; that is, at a peel-off speed of  $300 \pm 10$  mm/minute, 0.1 N to 1.3 N for 16 mm tape. The peel-off angle should be between  $165^\circ$  and  $180^\circ$

## Blister tape

## ENVIRONMENTAL CONSIDERATIONS

- Cover tape, carrier tape and reel do not contain environmentally harmful PVC materials.
- Because the carrier tape is made of polycarbonate, a homogeneous material (mono-plastic), it is ideally suited for recycling.
- Compared to other PVC-free materials polycarbonate shows excellent stiffness and very little deformation with temperature.
