

NORTHWEST EMC, INC.

22975 NW Evergreen Parkway, Suite 400
Hillsboro, OR 97124

March 8, 2006

Dear Application Examiner:

On behalf of Intermec Technologies Corporation, Northwest EMC, Inc. is submitting this application for a Class 2 Permissive Change of the previously certified Bluetooth module, FCC ID: EHABTM210. There have been no hardware or software changes to the BTM210 Bluetooth module. Intermec is seeking a C2PC in order to co-locate the Bluetooth module with a Wistron 802.11(b)/(g) radio, FCC ID: EHADRCEB, in Intermec's CN2B handheld device. Both radios operate in the 2400-2483.5 MHz band. A limited modular approval for the Wistron radio has also been submitted at this time.

The Bluetooth radio is used for Personal Area Networks and inventory control applications. The co-located Wistron 802.11(b)/(g) radio will be used for inventory control, as well, and for Local Area Networks. The radio is considered a portable device because accessories are provided that allow the EUT to be within 20 cm of the head or torso of the user. SAR reports were uploaded with the application for FCC ID: EHADRCEB.

Your efforts in reviewing this application are greatly appreciated.

Best regards,

Northwest EMC, Inc.
