

NORTHWEST EMC, INC.

22975 NW Evergreen Parkway, Suite 400
Hillsboro, OR 97124

November 8, 2005

Dear Application Examiner:

On behalf of Intermec Technologies Corporation, Northwest EMC Inc is submitting this application for the Class II Permissive Change of Intermec's RFID radio module, FCC ID: EHARFID915IM5. The radio has previously received full modular approval as a mobile device. There have been no hardware changes to the device. Intermec is seeking a Class II Permissive Change to approve software changes that have increased the data rates. The model number for the device is IM5.

The IM5 radio is frequency hopping spread spectrum operating in the 902 to 928 MHz band. To demonstrate compliance as a Part 15 Spread Spectrum Transmitter, tests were performed that could have been impacted by the software changes. These tests include Occupied Bandwidth, Band Edge Compliance, Spurious Conducted Emissions, and Spurious Radiated Emissions (please see Northwest EMC Inc Report #ITRM0091).

Your efforts in reviewing this application are greatly appreciated.

Best regards,

Northwest EMC, Inc.
