Statement of FM transmitter disable

Product: Fujitsu F905i Cellular Phone
Model No.: F905i
FCC ID: EJE-FOMA-F905I

The above device (cellular phone) has an integrated low power FM transmitter. This integrated low power FM transmitter can not be activated by the user in case the cellular phone is used or switched on outside of Japan. The integrated low power FM transmitter can also not be activated by the user in case the cellular phone is outside of the service area of a cellular phone network while switched on. In both cases, the integrated low power FM transmitter is also not activated automatically.

When the cellular phone is inside the service area of a cellular phone network, it will check all available cellular networks for the country code (amongst other things). The integrated low power FM transmitter will not switch on automatically in case the cellular phone detects networks having a country code other than the country code of Japan.

Also the user access to all functions related to the integrated low power FM transmitter will be disabled in case the cellular phone detects networks having a country code other than the country code of Japan.

This will prevent the user from manually switching on the integrated low power FM transmitter in case the cellular phone is operated within the service area of a cellular phone network which does not have the country code of Japan.

In case you have any question, please contact us,

Name and surname of applicant (or authorized representative): Yoshihiko Taki

Date: August 6, 2007
