## TEST REPORT

### REFERENCE STANDARD:

**USA FCC Part 15.247, 15.209**

**CANADA RSS-210, RSS-Gen**

**Radio Frequency Devices. Operation within the bands 902 - 928 MHz, 2400 -2483.5 MHz, and 5725 - 5850 MHz.**

**Licence-Exempt Radio Apparatus (All Frequency Bands): Category I Equipment.**

### General Requirements and Information for the Certification of Radio Apparatus.

**NIE** ..... : 41273RRF.001

Approved by  
(name / position & signature) ..... : A. Llamas / RF Lab. Manager

Elaboration date ..... : 2014-03-12

Firmado digitalmente por  
Alejandro Llamas Rodríguez  
Fecha: 2014.03.12 12:55:50  
+01'00'

**Identification of item tested** ..... : 7265NGW

Brand name ..... : INTEL

Model and/or type reference ..... : 7265NGW ( includes family sub-models 7265NGW AN, 7265NGW NB and 7265NGW BN)

Serial number ..... : TA#: G97996-007

WF MAC: 001500E67260

BD MAC: 001500E67264

Other identification of the product ..... : Commercial name: 7265NGW

HW Version: QS

SW Version:

Test SW: DRTU\_1\_7\_3\_859

Op SW: V17.0.0

For OEM factory installation:

FCC ID: PD97265NG

IC: 1000M-7265NG

For user installation:

FCC ID: PD97265NGU

IC: 1000M-7265NG

Features ..... : 802.11 a/b/g/n/ac Wireless LAN+ BT 4.0

Description ..... : 2x2 PCIe M.2 adapter card

**Applicant** ..... : INTEL MOBILE COMMUNICATIONS

Address ..... : 100 Center Point Circle, Suite 200, Columbia, South Carolina 29210 USA

CIF/NIF/Passport ..... : No provided data

Contact person: Steven Hackett

Telephone / Fax ..... : Tel: 803-216-2344/ FAX: 803-216-2176

## Competences and guarantees

AT4 wireless is a laboratory with a measurement facility in compliance with the requirements of Section 2.948 of the FCC rules and has been added to the list of facilities whose measurements data will be accepted in conjunction with applications for Certification under Parts 15 or 18 of the Commission's Rules. Registration Number: 720267.

AT4 wireless is a laboratory with a measurement site in compliance with the requirements of RSS 212, Issue 1 (Provisional) and has been added to the list of filed sites of the Canadian Certification and Engineering Bureau. Reference File Number: IC 4621A-1.

In order to assure the traceability to other national and international laboratories, AT4 wireless has a calibration and maintenance programme for its measurement equipment.

AT4 wireless guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at AT4 wireless at the time of performance of the test.

AT4 wireless is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

## General conditions

1. This report is only referred to the item that has undergone the test.
2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
3. This document is only valid if complete; no partial reproduction can be made without previous written permission of AT4 wireless.
4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of AT4 wireless and the Accreditation Bodies.

## Uncertainty

Uncertainty (factor  $k=2$ ) was calculated according to the AT4 wireless internal document:

PODT000: Procedimiento para el cálculo de incertidumbres de medida.

## Usage of samples

Samples undergoing test have been selected by: **the client.**

Sample S/01 is composed of the following elements:

| <u>Control N°</u> | <u>Description</u>        | <u>Model</u> | <u>Serial N°</u>                                               | <u>Date of reception</u> |
|-------------------|---------------------------|--------------|----------------------------------------------------------------|--------------------------|
| 41273/001         | 2x2 PCIe M.2 adapter card | 7265NGW      | TA#: G97996-007<br>WF MAC:001500E67260<br>BD MAC: 001500E67264 | 16/01/2014               |

Auxiliary elements used with the sample S/01:

| <u>Control N°</u> | <u>Description</u>                 | <u>Manufacture</u> | <u>Model</u>   | <u>Serial N°</u> | <u>Date of reception</u> |
|-------------------|------------------------------------|--------------------|----------------|------------------|--------------------------|
| 38067/28          | Laptop PC                          | DELL               | Latitude E5420 | CTFQQL1          | 08/01/2013               |

1. Sample S/01 has undergone following test(s).  
All radiated tests indicated in appendix A.
2. Sample S/02 has undergone following test(s).  
All conducted tests indicated in appendix A.

## Testing period

The performed test started on 2014-01-28 and finished on 2014-02-05.

The tests have been performed at AT4 wireless.

## Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

|                               |                                |
|-------------------------------|--------------------------------|
| Temperature                   | Min. = 19.1°C<br>Max. = 22.1°C |
| Relative humidity             | Min. = 49%<br>Max. = 55.5%     |
| Shielding effectiveness       | > 100 dB                       |
| Electric insulation           | > 10 kΩ                        |
| Reference resistance to earth | < 0,5 Ω                        |

In the semianechoic chamber (21 meters x 11 meters x 8 meters), the following limits were not exceeded during the test.

|                               |                                                                                             |
|-------------------------------|---------------------------------------------------------------------------------------------|
| Temperature                   | Min. = 17.4°C<br>Max. = 20.1°C                                                              |
| Relative humidity             | Min. = 41.1%<br>Max. = 44.5%                                                                |
| Air pressure                  | Min. = 1016mbar<br>Max. = 1019mbar                                                          |
| Shielding effectiveness       | > 100 dB                                                                                    |
| Electric insulation           | > 10 kΩ                                                                                     |
| Reference resistance to earth | < 0,5 Ω                                                                                     |
| Normal site attenuation (NSA) | < ±4 dB at 10 m distance between item under test and receiver antenna, (30 MHz to 1000 MHz) |
| Field homogeneity             | More than 75% of illuminated surface is between 0 and 6 dB (26 MHz to 1000 MHz).            |

In the chamber for conducted measurements the following limits were not exceeded during the test:

|                               |                                    |
|-------------------------------|------------------------------------|
| Temperature                   | Min. = 19.1°C<br>Max. = 24.7°C     |
| Relative humidity             | Min. = 43.1%<br>Max. = 51.1%       |
| Air pressure                  | Min. = 1018mbar<br>Max. = 1019mbar |
| Shielding effectiveness       | > 100 dB                           |
| Electric insulation           | > 10 kΩ                            |
| Reference resistance to earth | < 0,5 Ω                            |

## Summary

Considering the results of the performed test according to standard USA FCC Parts 15.247 and 15.209 / Canada RSS-210, the item under test is **IN COMPLIANCE** with the requested specifications specified in the standard.

NOTE: The results presented in this Test Report apply only to the particular item under test established in page 1 of this document, as presented for test on the date(s) shown in section, "USAGE OF SAMPLES, TESTING PERIOD AND ENVIRONMENTAL CONDITIONS".

## Remarks and comments

1.- No comments.

## TEST CONDITIONS

Power supply (V):

$$V_{\text{nominal}} = 3.3 \text{ Vdc}$$

Type of power supply = DC voltage from HMC/NGFF Testing board.

Type of antenna = External attachable PIFA antenna.

Declared Gain for antenna (maximum) = 3.24 dBi

## TEST FREQUENCIES:

Lowest channel: 2402 MHz

Middle channel: 2441 MHz

Highest channel: 2480 MHz

For Bluetooth Basic and EDR operational modes the transmission is at CHAIN B RF output.

For radio testing purposes the card was installed in a test fixture. The test fixture is connected to a laptop computer and dc power supplied. The laptop computer was used to configure the EUT to continuously transmit at a specified output power with different modes and modulation schemes.

## CONDUCTED MEASUREMENTS

The equipment under test was set up in a shielded room and it is connected to the spectrum analyzer using a low loss RF cable. The reading in the spectrum analyser is corrected taking into account the cable loss.

## RADIATED MEASUREMENTS

All radiated tests were performed in a semi-anechoic chamber. The measurement antenna is situated at a distance of 3 m for the frequency range 30 MHz-1000 MHz (30 MHz-1000 MHz Bilog antenna) and at a distance of 1m for the frequency range 1 GHz-25 GHz (1 GHz-18 GHz Double ridge horn antenna and 18 GHz-40 GHz horn antenna).

For radiated emissions in the range 1 GHz-25 GHz that is performed at a distance closer than the specified distance, an inverse proportionality factor of 20 dB per decade is used to normalize the measured data for determining compliance.

The equipment under test was set up on a non-conductive (wooden) platform one meter above the ground plane and the situation and orientation was varied to find the maximum radiated emission. It was also rotated 360° and the antenna height was varied from 1 to 4 meters to find the maximum radiated emission.

Measurements were made in both horizontal and vertical planes of polarization.

**FCC Section 15.247 Subclause (a) (1) / RSS-210 Clause A8.1 (b). 20 dB Bandwidth and Carrier frequency separation**

**SPECIFICATION**

Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.

**RESULTS**

(See next plots)

Modulation: GFSK

# FCC Section 15.247 Subclause (a) (1) (iii) / RSS-210 Clause A8.1 (d). Number of hopping channels

## SPECIFICATION

Frequency hopping system in the 2400-2483.5 MHz band shall use at least 15 channels.

## RESULTS

The number of hopping channels is 79 for all three modes (see next plots).

## Modulation: GFSK

Number of hopping frequencies: 39

Number of hopping frequencies: 40

Total number of hopping frequencies: 79

Verdict: PASS

## Modulation: $\Pi/4$ -DQPSK

Number of hopping frequencies: 39

Number of hopping frequencies: 40

Total number of hopping frequencies: 79

Verdict: PASS

## Modulation: 8-DPSK

Number of hopping frequencies: 39

Number of hopping frequencies: 40

Total number of hopping frequencies: 79

Verdict: PASS

## FCC Section 15.247 Subclause (a) (1) (iii) / RSS-210 Clause A8.1 (d). Time of occupancy (Dwell Time)

### SPECIFICATION

The average time of occupancy on any channel shall not be greater than 0.4 seconds (400 ms) within a period of 0.4 seconds multiplied by the number of hopping channels employed =  $0.4 \times 79 = 31.6$  seconds.

### RESULTS

#### **Modulation: GFSK**

##### 1. TIME OF OCCUPANCY (DWELL TIME) FOR PACKET TYPE DH1.

The system makes worst case 1600 hops per second or 1 time slot has a length of  $625\mu s$  with 79 channels. A DH1 Packet need 1 time slot for transmitting and 1 time slot for receiving. Then the system makes worst case  $1600/2 = 800$  hops per second with 79 channels. So you have each channel  $800/79 = 10.13$  times per second and so for a period of  $0.4 \times 79 = 31.6$  seconds you have  $10.13 \times 31.6 = 320.11$  times of appearance.

Each Tx-time per appearance is  $376.38\mu s$  (see next plot).

So we have  $320.11 \times 376.38\mu s = 120.48\text{ ms}$  per 31.6 seconds.

Verdict: PASS

## 2. TIME OF OCCUPANCY (DWEELL TIME) FOR PACKET TYPE DH3.

A DH3 Packet needs 3 time slots for transmitting and 1 time slot for receiving. Then the system makes worst case  $1600/4 = 400$  hops per second with 79 channels. So you have each channel  $400/79 = 5.1$  times per second and so for a period of  $0.4 \times 79 = 31.6$  seconds you have  $5.1 \times 31.6 = 161.16$  times of appearance.

Each Tx-time per appearance is 1.633 ms (see next plot).

So we have  $161.16 \times 1.633 \text{ ms} = 263.17 \text{ ms}$  per 31.6 seconds.

Verdict: PASS

### 3. TIME OF OCCUPANCY (DWELL TIME) FOR PACKET TYPE DH5.

A DH5 Packet needs 5 time slots for transmitting and 1 time slot for receiving. Then the system makes worst case  $1600/6 = 266.67$  hops per second with 79 channels. So you have each channel  $266.67/79 = 3.37$  times per second and so for a period of  $0.4 \times 79 = 31.6$  seconds you have  $3.37 \times 31.6 = 106.49$  times of appearance.

Each Tx-time per appearance is 2.880 ms (see next plot).

So we have  $106.49 \times 2.880 \text{ ms} = 306.69 \text{ ms}$  per 31.6 seconds.

Verdict: PASS

## Modulation: $\Pi/4$ -DQPSK

### 1. TIME OF OCCUPANCY (DWELL TIME) FOR PACKET TYPE DH1.

The system makes worst case 1600 hops per second or 1 time slot has a length of  $625\mu\text{s}$  with 79 channels. A DH1 Packet need 1 time slot for transmitting and 1 time slot for receiving. Then the system makes worst case  $1600/2 = 800$  hops per second with 79 channels. So you have each channel  $800/79 = 10.13$  times per second and so for a period of  $0.4 \times 79 = 31.6$  seconds you have  $10.13 \times 31.6 = 320.11$  times of appearance.

Each Tx-time per appearance is  $386.39\mu\text{s}$  (see next plot).

So we have  $320.11 \times 386.39\mu\text{s} = 123.69\text{ ms}$  per 31.6 seconds.

Verdict: PASS

## 2. TIME OF OCCUPANCY (DWEELL TIME) FOR PACKET TYPE DH3.

A DH3 Packet needs 3 time slots for transmitting and 1 time slot for receiving. Then the system makes worst case  $1600/4 = 400$  hops per second with 79 channels. So you have each channel  $400/79 = 5.1$  times per second and so for a period of  $0.4 \times 79 = 31.6$  seconds you have  $5.1 \times 31.6 = 161.16$  times of appearance.

Each Tx-time per appearance is 1.639 ms (see next plot).

So we have  $161.16 \times 1.639 \text{ ms} = 264.14 \text{ ms}$  per 31.6 seconds.

Verdict: PASS

### 3. TIME OF OCCUPANCY (DWELL TIME) FOR PACKET TYPE DH5.

A DH5 Packet needs 5 time slots for transmitting and 1 time slot for receiving. Then the system makes worst case  $1600/6 = 266.67$  hops per second with 79 channels. So you have each channel  $266.67/79 = 3.37$  times per second and so for a period of  $0.4 \times 79 = 31.6$  seconds you have  $3.37 \times 31.6 = 106.49$  times of appearance.

Each Tx-time per appearance is 2.888 ms (see next plot).

So we have  $106.49 \times 2.888 \text{ ms} = 307.54 \text{ ms}$  per 31.6 seconds.

Verdict: PASS

## Modulation: 8-DPSK

### 1. TIME OF OCCUPANCY (DWELL TIME) FOR PACKET TYPE DH1.

The system makes worst case 1600 hops per second or 1 time slot has a length of 625 $\mu$ s with 79 channels. A DH1 Packet need 1 time slot for transmitting and 1 time slot for receiving. Then the system makes worst case 1600/2 = 800 hops per second with 79 channels. So you have each channel 800/79 = 10.13 times per second and so for a period of 0.4 x 79 = 31.6 seconds you have 10.13 x 31.6 = 320.11 times of appearance.

Each Tx-time per appearance is 386.39  $\mu$ s (see next plot).

So we have 320.11 x 386.39  $\mu$ s = 123.69 ms per 31.6 seconds.

Verdict: PASS

## 2. TIME OF OCCUPANCY (DWELL TIME) FOR PACKET TYPE DH3.

A DH3 Packet needs 3 time slots for transmitting and 1 time slot for receiving. Then the system makes worst case  $1600/4 = 400$  hops per second with 79 channels. So you have each channel  $400/79 = 5.1$  times per second and so for a period of  $0.4 \times 79 = 31.6$  seconds you have  $5.1 \times 31.6 = 161.16$  times of appearance.

Each Tx-time per appearance is 1.639 ms (see next plot).

So we have  $161.16 \times 1.639 \text{ ms} = 264.14 \text{ ms}$  per 31.6 seconds.

Verdict: PASS

### 3. TIME OF OCCUPANCY (DWEELL TIME) FOR PACKET TYPE DH5.

A DH5 Packet needs 5 time slots for transmitting and 1 time slot for receiving. Then the system makes worst case  $1600/6 = 266.67$  hops per second with 79 channels. So you have each channel  $266.67/79 = 3.37$  times per second and so for a period of  $0.4 \times 79 = 31.6$  seconds you have  $3.37 \times 31.6 = 106.49$  times of appearance.

Each Tx-time per appearance is 2.892 ms (see next plot).

So we have  $106.49 \times 2.892 \text{ ms} = 307.97 \text{ ms}$  per 31.6 seconds.

Verdict: PASS

**FCC Section 15.247 Subclause (b) / RSS-210 Clause A8.4 (2). Maximum peak output power and antenna gain**

SPECIFICATION

For frequency hopping systems operating in the 2400-2483.5 MHz band employing at least 75 hopping channels: 1 watt (30 dBm).

RESULTS

MAXIMUM OUTPUT POWER. See next plots.

Declared maximum antenna gain: 3.24 dBi.

The EIRP power (dBm) is calculated by adding the declared maximum antenna gain to the measured conducted power.

Modulation: GFSK

|                              | Lowest frequency<br>2402 MHz | Middle frequency<br>2441 MHz | Highest frequency<br>2480 MHz |
|------------------------------|------------------------------|------------------------------|-------------------------------|

Verdict: PASS

**FCC Section 15.247 Subclause (d) / RSS-210 Clause A8.5. Emission limitations radiated  
(Transmitter)**

**SPECIFICATION**

Radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)):

| Frequency Range (MHz) | Field strength ( $\mu\text{V/m}$ ) | Field strength ( $\text{dB}\mu\text{V/m}$ ) | Measurement distance (m) |
|-----------------------|------------------------------------|---------------------------------------------|--------------------------|
| 0.009-0.490           | 2400/F(kHz)                        | -                                           | 300                      |
| 0.490-1.705           | 24000/F(kHz)                       | -                                           | 300                      |
| 1.705 - 30.0          | 30                                 | -                                           | 30                       |
| 30 - 88               | 100                                | 40                                          | 3                        |
| 88 - 216              | 150                                | 43.5                                        | 3                        |
| 216 - 960             | 200                                | 46                                          | 3                        |
| 960 - 25000           | 500                                | 54                                          | 3                        |

The emission limits shown in the above table are based on measurements employing CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector.

For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

**RESULTS:**

The situation and orientation was varied to find the maximum radiated emission. It was also rotated 360° and the antenna height was varied from 1 to 4 meters to find the maximum radiated emission.

Measurements were made in both horizontal and vertical planes of polarization.

All tests were performed in a semi-anechoic chamber at a distance of 3 m for the frequency range 30 MHz-1000 MHz and at distance of 1m for the frequency range 1 GHz-25 GHz.

The field strength is calculated by adding correction factor to the measured level from the spectrum analyzer. This correction factor includes antenna factor, cable loss and pre-amplifiers gain.

### Frequency range 30 MHz-1000 MHz.

Note: The spurious emissions below 1 GHz do not depend on either the operating channel or the modulation mode selected in the EUT.

#### Spurious levels operating (radiated) closest to limit.

| Spurious frequency (MHz) | Polarization | Detector   | Emission Level (dBμ V/m) | Measurement Uncertainty (dB) |
|--------------------------|--------------|------------|--------------------------|------------------------------|
| 32.91                    | V            | Quasi-peak | 30.33                    | ±4.12                        |
| 81.41                    | V            | Quasi-peak | 28.64                    | ±4.12                        |
| 143.49                   | V            | Quasi-peak | 36.52                    | ±4.12                        |
| 165.80                   | V            | Quasi-peak | 37.88                    | ±4.12                        |

### Frequency range 1 GHz-25 GHz

Modulation: GFSK

#### 1. CHANNEL: LOWEST (2402 MHz).

| Spurious frequency (MHz) | Polarization | Detector | Emission Level (dBμ V/m) | Measurement Uncertainty (dB) |
|--------------------------|--------------|----------|--------------------------|------------------------------|

Verdict: PASS

FREQUENCY RANGE 30 MHz-1000 MHz.

(This plot is valid for all three channels and all modulation modes).

FREQUENCY RANGE 1 GHz to 3 GHz.

**Modulation: GFSK**

**CHANNEL: Lowest (2402 MHz).**

Note: The peak shown in the plot is the carrier frequency.

**CHANNEL: Middle (2441 MHz).**

Note: The peak shown in the plot is the carrier frequency.

**CHANNEL: Highest (2480 MHz).**

Note: The peak shown in the plot is the carrier frequency.

**Modulation: Π/4-DQPSK**

**CHANNEL: Lowest (2402 MHz).**

Note: The peak shown in the plot is the carrier frequency.

**CHANNEL: Middle (2441 MHz).**

Note: The peak shown in the plot is the carrier frequency.

**CHANNEL: Highest (2480 MHz).**

Note: The peak shown in the plot is the carrier frequency.

**Modulation: 8-DPSK**

**CHANNEL: Lowest (2402 MHz).**

Note: The peak shown in the plot is the carrier frequency.

**CHANNEL: Middle (2441 MHz).**

Note: The peak shown in the plot is the carrier frequency.

**CHANNEL: Highest (2480 MHz).**

Note: The peak shown in the plot is the carrier frequency.

FREQUENCY RANGE 3 GHz to 18 GHz.

**Modulation: GFSK**

**CHANNEL: Lowest (2402 MHz).**

**CHANNEL: Middle (2441 MHz).**

**CHANNEL: Highest (2480 MHz).**

**Modulation:  $\Pi/4$ -DQPSK**

**CHANNEL: Lowest (2402 MHz).**

**CHANNEL: Middle (2441 MHz).**

**CHANNEL: Highest (2480 MHz).**

**Modulation: 8-DPSK**

**CHANNEL: Lowest (2402 MHz).**

**CHANNEL: Middle (2441 MHz).**

**CHANNEL: Highest (2480 MHz).**

FREQUENCY RANGE 18 GHz to 25 GHz.

(This plot is valid for all three channels and all modulation modes).

FREQUENCY RANGE 2.31 GHz to 2.39 GHz. (RESTRICTED BAND)

**CHANNEL: Lowest**

**Modulation: GFSK**

**Modulation: Π/4-DQPSK**

## Modulation: 8-DPSK

## CHANNEL: Middle

## Modulation: GFSK

## Modulation: $\Pi/4$ -DQPSK

## Modulation: 8-DPSK

**CHANNEL: Highest**

**Modulation: GFSK**

**Modulation: Π/4-DQPSK**

# Modulation: 8-DPSK

FREQUENCY RANGE 2.4835 GHz to 2.5 GHz. (RESTRICTED BAND)

**CHANNEL: Lowest**

(This plot is valid for all modulation modes).

**CHANNEL: Middle**

(This plot is valid for all modulation modes).

**CHANNEL: Highest**

**Modulation: GFSK**

**Modulation: Π/4-DQPSK**

# Modulation: 8-DPSK
