

 [ı —
	Consult your installation center for operation and information on convenience options 1 & 2 which may have been connected or added to your vehicle.	
	Quick Stop Mode: With vehicle running, if you wish to make a quick stop and leave the vehicle running, once you arrive at your destination: a) Place the gear selector in Park, b) Set the parking brake, c) With your foot OFF the brake, press the transmitter button two times in succession. c) With your foot OFF the brake, press the transmitter button two times in succession. c) With your foot OFF the brake, and exit the vehicle. Lock the doors with the key to insure security.	
f \ f r 2	(Alarm Systems Only) PUSH-BUTTON LED RECEIVER VALET/OVERRIDE/SAFETY SWITCH The Push-Button LED switch located in the receiver allows you to temporarily bypass all alarm functions, eliminating the need to hand your transmitter to parking attendants or garage mechanics. When the system is in valet mode, all alarm functions are bypassed, however the remote panic feature and remote door locks will remain operational. To use the valet mode, the system must first be disarmed either by using your keychain transmitter, or by activating your personalized manual override code. 1. Enter the vehicle, and turn the ignition key to the on position. 2. Press and hold the Push-Button switch until the LED turns on solid. The system will remain in the valet mode. 3. To return to normal operation, press and release the Push-Button switch any time the ignition is	
	 NOTE: Always remember to return the vehicle to the valet off position. This will ensure that the vehicle remains protected at all times. 	
1	(Alarm Systems Only) MANUALLY OVERRIDING YOUR SYSTEM:	
t t	USING THE RECEIVERS PUSH-BUTTON OVERRIDE SWITCH Your Security System can be disarmed without the use of the keychain transmitter. This is necessary, since you will need the ability to operate your vehicle if the transmitter is lost or its battery fails. If your system has been selected for Valet Switch manual override as indicated on the last page of this manual, to bypass the alarm system; 1. Open the vehicle door. The alarm will sound. 2. Turn the ignition key to the on position. 3. Within 5 seconds, press and release the push-button override switch. The alarm system will stop sounding and enter the (bypassed) mode. You can now start and operate the vehicle normally. Typically this override mode is used only if the transmitter has become inoperative.	
C F F C C	(Alarm & Keyless Systems Only) PROGRAMMING YOUR CUSTOM OVERRIDE CODE Unlike override switches easily found, and defeated, this security system allows the consumer to program a personal override code, offering a higher level of security. To take advantage of this option, programmable feature # 9 must be selected for the Custom Code Option. Consult your installation center for programming details. The system comes from the factory with a preprogrammed override code of 11. To change this default override code, do the following: 1. Disarm the system by use of the transmitter, or by use of the emergency override sequence. Turn the ignition switch to the on position. 2. Within 10 seconds, press and release the Receivers push-button switch, 3 times. 3. Within 10 seconds turn the ignition switch off, on, off, on, off, on. (The siren or horn will beep and the lights will flash one time.)	
	Page 2	
	128-9486	-
	Page 2	

 Within 10 seconds, begin to enter your chosen 10ths digit by pressing and releasing the Receivers push-button switch from 1 up to 9 times. Within 10 seconds of the last entered 10ths digit, turn the ignition switch off then on. Within 10 seconds, begin to enter your chosen units digit by pressing and releasing the Receivers push-button switch from 1 up to 9 times. Finish by turning the ignition switch to the off position. If the new code was accepted, the unit will report back the newly entered code, by flashing the LED, first indicating the 10ths digit, pause and then the units digit. The unit will report the new code three times with a one second pause between each code, then the system will begin arming. If the LED flash pattern reports the previously stored code, the new code was not entered correctly. Please repeat steps 1 through 7 above considering the following. NOTE: Acceptable digits 10ths or units are 1 through 9. The unit will not recognize a 0 (Zero), or 	
 NOTE: If 15 seconds of inactivity expire, or if the ignition switch is turned off for more then 5 seconds during any of the above steps, the unit will revert back to the last successfully stored code. 	
CUSTOM CODE PROGRAMMING EXAMPLE	
To Change the code from the factory preassigned code of 11 to "52" you would do the following: 1. Disarm the system by use of the transmitter, or by use of the emergency override sequence. 2. Turn the ignition switch to the on position. 3. Within 10 seconds, press and release the Receivers push-button switch, 3 times. 4. Within 10 seconds turn the ignition switch off, on, off, on. (The siren or horn will beep and the lights will fash one time.) 5. Within 10 seconds, begin to press and release the Receivers push-button switch to set the tenths digit. (As per the example, press and release 5 times to set the tenths digit to 5) 6. Within 10 seconds of the last press of the pushbutton, turn the ignition switch off then on. 7. Within 10 seconds, begin to press and release the Receivers Push-button switch to set the units digit.	
digit. (As per the example, press and release 2 times to set the units digit to 2). 8. Turn the ignition switch to the off position. Immediately observe the LED flash pattern. You will notice the LED flashing five times, pause, and then flash two times, pause. This pattern will be repeated three times indicating the new code (52) has been accepted and stored in memory.	
NOTE: If after step 7, the LED flashes a code other than what was just entered, this indicates that the code has not been changed. You will have to repeat steps 1 through 7 above being certain to note the following: Acceptable digits 10ths or units are 1 through 9. The unit will not recognize a 0 (Zero), or no digit entered in any place, units or tenths.	
NOTE: If 15 seconds of inactivity expire, or if the ignition switch is turned off for more then 5 seconds during any of the above steps, the unit will revert back to the last successfully stored code.	
(Alarm Systems Only) MANUALLY OVERRIDING YOUR SYSTEM:	
USING THE CUSTOM CODE OVERRIDE	
Assuming the override code programmed has not been changed, and the default override code of 11 is in the system's memory. 1) Enter the vehicle and turn the ignition switch to the on position. NOTE: The siren will sound.

I		
	set up and installed by your installation center. Once this feature is added when the unlock button of transmitter 1 is used, it will set driver 1 priority and when the unlock button of transmitter 2 is used it will set driver 2 priority. In this situation, the unlock button can be programmed into two receiver channels, unlock, channel 2 and driver priority 6 or 7. In no other circumstance will the system allow a transmitter button to be programmed into 2 receiver channels at the same time.	
	This remote has the ability to operate 2 similar Alarms From A Single Transmitter. To toggle on and off vehicle one or two.,, Press the Trunk/Key button + the Lock button for 5 seconds. The LED flashes 2 times. Release the buttons, to select 2nd vehicle mode. Program this transmitter into the second vehicle's system. Any time you are in 2nd vehicle mode when the transmitter is operated, the LED will flash twice for each function. When in the prime vehicle mode, the LED will flash once for each function.	
	To Erase All Transmitters:	
	 1) Turn the ignition switch to the "On" position. 2) Press and release the pushbutton switch found on the windshield mount receiver 3 times. (The LED on the receiver will flash. 3) Press and hold the push-button switch on the windshield receiver for 6 seconds. The LED will flash 2X fast which is an indication all transmitters programmed to the system are now erased. 4) Turn the ignition switch off. Once you have erased all transmitters, you will have to go back and program all transmitters that you want to operate your system. 	
	Transmitter Battery Replacement	
	5BER17XPR 1) Remove the 00 Phillips head screw from the rear case. 2) Separate the case halves by inserting a small plastic tool in the top right slot. 3) Carefully slide the two CR2025 batteries from the transmitter PCB and dispose of properly. 4) Insert two new CR2025 batteries with the (+) side up away from the PCB. 5) Close the case in reverse of disassembly.	
	 175XPR 1) Locate the slot at the lower right hand side of the transmitter case. 2) Separate the case halves by inserting a small plastic tool in the slot and carefully prying apart the case halves. 3) Carefully slide the CR2032 battery out from under the battery clip and dispose of properly. 4) Insert a fresh CR2032 battery with the (+) side up away from the PCB. 5) Close the case in reverse order of disassembly.
