

No Radiated Emissions Spurious below 1GHz data provided in report, please confirm that the EUT was scanned between 30MHz and 1GHz.

The EUT was scanned for spurious emissions arising from the Tx/Rx chains of the device from 30-1000 MHz. No spurious relating to those portions of the device (other than that at the band edges) was observed. Please note that, as a vehicular mounted device, any spurious emissions arising from digital components are exempt from regulation.
