2 General Information

2.1 Description of Equipment Under Test

Product: Transmitter

Model Number : KTLA

Applicant : Nutek Corporation

NO. 167, Lane 235, Bauchiau Rd., Shindian City, Taipei County

23145, Taiwan

Manufacturer : Nutek Corporation

NO. 167, Lane 235, Bauchiau Rd., Shindian City, Taipei County

23145, Taiwan

Power Supply : 3Vdc Battery

Operating Frequency : 433.92MHz

Channel Number : 1 channel

Type of Modulation : ASK

Antenna description: This device uses PCB antenna.

The antenna is integral to the device, thereby meeting the

requirement of FCC 15.203.

Date of Test : Sep. 18 ~ 20, 2012

Additional Description: 1) The Model Number "KTLA" is representative selected in the

test and included in this report.

2) For more detail specification about EUT, please refer to the

user's manual.

3 Test specifications

3.1 Test standard

The EUT was performed according to FCC Part 15 Subpart C Section 15.231 procedure and setup followed by ANSI C63.4, 2003 requirements.

3.2 Operation mode

By preliminary testing and verifying three axis (X, Y and Z) position of EUT transmitted status, it was found that "X axis" position was the worst, then the final test was executed the worst condition and test data were recorded in this report

The EUT was operated in continuous transmission mode during all of the tests.

4 Radiated emission test

4.1 Limits

According to FCC 15.231(b) requirement:

In addition to the provisions of §15.205, the field strength of emissions from intentional radiator operated under this section shall not exceed the following:

Fundamental and harmonics emission limits

Frequency	Field Strength	of Fundamental	Field Strength	of Harmonics
(MHz)	(μ V/m@3m) (dB μ V/m@3m)		(μ V/m @3m)	(dB μ V/m@3m)
433.92	10996	80.8	1099.6	60.8

General Radiated emission Limit

Spurious Emission tested through until 10th harmonic. Radiated emissions, which fall in the restricted bands, as defined in §15.205 (a), comply with the radiated emission limits specified in §15.209 (a).

Frequency	15.209 Limits					
(MHz)	(μ V/m @3m)	(dB μ V/m @3m)				
30-88	100	40				
88-216	150	43.5				
216-960	200	46				
Above 960	500	54				

Remark:

- 1. The table above tighter limit applies at the band edges.
- 2. The measurement distance in meters, which that between form closest point of EUT to instrument antenna.

FCC ID: ELVNTLC Page 11 of 27

4.2 Calculation of Average Factor

The output field strengths of specification in accordance with the FCC rules specify measurements with an average detector. During the test, a spectrum analyzer incorporating a peak detector was used. Therefore, a reduction factor can be applied to the resultant peak signal level and compared to the limit for measurement instrumentation incorporating an average detector.

The duty cycle is measured in 100 ms or the repetition cycle period, whichever is a shorter time frame. The duty cycle is measured by placing the spectrum analyzer to set zero span at 100kHz resolution bandwidth.

Averaging factor in dB =20 log (duty cycle)

The duration of one cycle = 100.34ms

The duty cycle is simply the on-time divided by 100ms

Duty Cycle = (2ms*1+1.08ms*16+0.36ms*21)=26.84 ms / 100ms

Therefore, the averaging factor is found by $20 \log 0.2684 = -11.42 \text{ dB}$

Please see the diagrams below.

The EUT was complied with the requirement of FCC 15.231 (a)(1), which employed a switch that will automatically deactivate the transmitter within less than 5 seconds of being released.

Configuration of Measurement

Measurement Frequency above 1GHz

4.4 Test Procedure

Radiated emission measurements frequency range were performed from 30MHz to 4GHz. Spectrum Analyzer Resolution Bandwidth set to 100kHz or greater for frequencies from 30MHz to 1GHz, and set 1MHz Resolution Bandwidth for frequencies above 1GHz.

The EUT is place on non-conductive turntable for the test. If peripheral devices apply to the EUT, the peripheral devices will be connected to EUT and whole system. During the emission test, the signal is maximized through rotation and all cables were present worst-case emissions. The height of antenna and polarization is constantly changed for exploring maximum signal reading. The height of antenna can be up form reference ground to 4 meter and down to 1 meter.

4.5 Test Result

PASS.

The final test emission data is shown as following tables.

5 Emission bandwidth

5.1 Limits

According to FCC 15.231(c) requirement:

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating between 70 MHz to 900 MHz. Those devices operating above 900 MHz, the emission spurious shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.

B.W (20dBc) Limit = 0.25% * f(MHz) = 0.25% * 433.92MHz = 1084.8kHz

5.2 Test Result

PASS.
