Subject: Cover Letter – HHSR3 FCC approval
FCC ID: EO9HHSR3

Attached is our submittal for the HHSR3 module. The scope is a modular approval under the following rules:

Frequency (MHz)	Radio Mode	Rule
952-960	Low-power programming	FCC part 15.231 *
908-924	FHSS	FCC part 15.247
	Low power single channel	FCC part 15.249

Note: 15.231 approval includes a waiver that exempts us from the message length requirements

Although not within the scope of this certification, this radio does have a licensed part 101 mode that operates in the 952-960MHz range. Itron is taking the verification option per FCC part 101.139(b) for this mode. Note that although our RSS-119 test report for Industry Canada includes verbiage on part 101 regulations, we are not pursuing certification for this mode.

Sincerely,

Drew Rosenberg
