Class II Permissive Change Request
FCC Form 731**

for the

Tait's T85x -1 (400-440MHz) base station

modulated with

16FSK digital modulation from Dataradio Paragon III BDLC

FCC ID: EOTBDD4T85-1

Trade Name: Paragon/PD

July 9, 2004

AFFIDAVIT

The technical data included in this report has been accumulated through tests that were performed by me or by engineers under my direction. To the best of my knowledge, all of the data is true and correct.

A handwritten signature in black ink, appearing to read "Norman Pearl". The signature is fluid and cursive, with a large initial "N" and "P".

Norman D. Pearl
Vice-president Engineering, Dataradio Inc.

Dataradio Inc., Montreal, Canada

**ENGINEERING STATEMENT
OF CONSTANTIN PINTILEI**

The application consisting of the attached engineering exhibit and associated FCC form 731 has been prepared in support of a request for a Class II Permissive Change for EOTBDD4T85-1. All changes involved fall under Class II Permissive Change types and they are entirely detailed within the current report.

The certificate EOTBDD4T85-1 was originally granted to Dataradio for the transmitter of its UHF base station following a change in ID on 11/16/2000. Four more class II permissive changes were subsequently granted (07/12/2001, 01/24/2002, 01/31/2003 and 03/01/2004) to append more digital modulation sources (2^n FSK_{n=2,3} and IVIS controller). The transmitter is comprised of the Exciter and PA modules, both belonging to the T85M-XY (see page 7 for part# description) UHF base station. Dataradio Inc. buys this UHF base station from Tait Electronics, fits the source for the proposed digital modulation scheme, does the final assembly of transmitter and controller and markets the completed UHF base station.

The Class II Permissive type of change demonstrated with this filing relates with the emission designator list because of a new proposed modulation source. The certificate EOTBDD4T85-1 is granted for the following list of emission designators: 10K7 and 15K7F3E, and 14K3, 15K9, 7K17, 8K00, 16K7, 16K5, 14K9, 8K33, 8K84 and 11K4 F1D. This change asks for the addition of a new digital modulation source which generates SRRC16FSK at four rates of 64.0 and 57.6kbps for 25kHz channels, and 32.0 and 28.8kbps for 12.5kHz channels. Their associated emission designators are already on the list. For both claims compliance has been demonstrated with masks 90.210C or D as required. This Class II permissive change involves the modulation source only and it is completely described in the current report.

EXISTING CONDITIONS

The unit utilized for these occupied bandwidth and mask-compliance measurements was a prototype built from a production EOTBDD4T85-1 and a prototype Paragon 3 controller used to create the modulation scheme. The exciter operates on frequencies ranging from 400.000 MHz to 440.000 MHz. The frequency tolerance of the exciter is .0001% or 1.0 parts per million and the output power of the PA is 100W as granted in EOTBDD4T85-1.

PROPOSED CONDITIONS

It is proposed to accept the Class II permissive change request for the EOTBDD4T85-1 certificate for operation in the band of frequencies previously outlined. The applicant anticipates marketing the device for use in wireless transmission of data.

PERFORMANCE MEASUREMENTS

All measurements for Occupied Bandwidth and mask compliance as per 2.1043 (b)(2) were conducted in accordance with the Rules and Regulations Section 2.1041 and 2.1049 of Rules Service Co rev.2-167, Mar 15, 2004. The measurements were made in the engineering laboratory located at 5500 Royalmount Ave, Montreal, Canada. All measurements were made and recorded by myself or under my direction. The measurements were made between July 5, 2004 and July 8, 2004.

CONCLUSION

Given the results of the measurements contained herein, the applicant requests a Class II Permissive Change for the Certificate EOTBDD4T85-1 to accept the use of 16K5F1D for 64kbps SRRC16FSK and to append to the list 16K2F1D, 8K50F1D and 8K67F1D as the emission designator for the other 16FSK digital modulations proposed.

(1993) Technical University of Iasi, Romania
TECHNICAL EXPERIENCE: Professional engineer since 2001
10 Years experience in radio frequency measurements.

Class II Permissive Change Information - Rule part 2.1043 (b)(2)

The certificate EOTBDD4T85-1 was granted to Dataradio Inc. following an ID change request from CASTEL0021. The certificate CASTEL0021 had been granted to Tait Electronics Ltd. for its transmitter comprised of T857 Exciter module and T859 PA module. It belongs to the T85M-XY (see page 7 for part# description) UHF base station. Dataradio Inc. uses this base station to build Paragon3, a base station for wireless data networks. In order to market it under the Dataradio logo a change in ID was done.

Further, several data speeds using 4-FSK and 8-FSK SRRC digital modulation were granted following three Class II Permissive Change requests. The certificate granted on 01/31/2003 has the following emission designators::

- 10K7 and 15K7F3E inherited from the original certificate CASTEL0021 granted on 01/19/1999
- 14K3 and 15K9F1D for 25.6kbps and 19.2 kbps 4-FSK SRRC digital modulation granted on 11/16/2000 following the ID change together with Class II permissive change request
- 7K50 and 7K00F1D, used for 16.0 and 14.4 kbps 4-FSK SRRC digital modulation granted on 07/12/2001 following a Class II permissive change request.
- 16K5F1D, used for 32.0 kbps 4-FSK RC digital modulation, granted on 01/24/2002 following a Class II permissive change request
- 8K00 and 7K17F1D replaced 7K50 and 7K00F1D used for 16.0 and 14.4 kbps 4-FSK SRRC digital modulation; new values of 16K7, 14K9 and 8K33F1D used for respectively 48.0kbps, 43.2kbps and 21.6kbps at 8-FSK SRRC; the value of 8K00F1D also represents 24.0kbps at 8-FSK SRRC. All were granted on 01/31/2003 following a Class II permissive change request.
- 11K4F1D and 8K84F1D, used with 9.6kbps DRCFSK in 25kHz channels and 12.5kHz channels respectively, created by another modulation source, the IVIS controller. With the same application the emission designator of 15K9F1D was extended to also cover 19.2kbps DRCFSK (also generated by IVIS) in 25kHz channels. The application was granted on 03/01/2004 following a Class II permissive change request

The current Class II Permissive Change application requests the emission designator 16K5F1D with 64.0kbps SRRC16FSK modulation, 16K2F1D with 57.6kbps SRRC16FSK modulation in 25kHz channels, and 8K50F1D with 32.0kbps SRRC16FSK modulation, and 8K67F1D with 28.8kbps SRRC16FSK modulation in 12.5kHz channels. The modulation scheme proposed and the Paragon 3 modulation source are described in Annex A of this report where a detailed description of the modulation source is available. The compliance with masks C or D respectively is further demonstrated in the test section.

The change above described involves the modulation source only therefore it falls under a Class II Permissive Change as per 2.1043 (b)(2). No other changes occur elsewhere in the circuitry of the exciter module or of the PA module.

The characteristics affected by the first modification of above are:

- Digital Modulation Techniques - part 2.1033.(c)(13)
- Type of emission and Emission designators list - part 2.1033 (c)(4), 90.209
- Occupied bandwidth and mask compliance requirement - part 2.1049,90.210(c)(d)

All this Class II permissive change data as per 2.1043 are completely described with the current report.

SPECTRUM EFFICIENCY STANDARD DATA 90.203 (j)(3)

The Paragon 3 SRRC16FSK modulation source transmits 64000 bps in 25 kHz channel bandwidth.
This represents more than $4800 \times 4 = 19200$ bps required for $6.25 \times 4 = 25$ kHz channel bandwidth
The Paragon 3 16FSK modulation source transmits 32000 bps in 12.5 kHz channel bandwidth.
This represents more than $4800 \times 2 = 9600$ bps required for $6.25 \times 2 = 12.5$ kHz channel bandwidth

DIGITAL MODULATION TECHNIQUES 2.1033 (c)(13)

Annex A. Data Concerning the Modulation Source

TX Data Test Pattern:

The transmit “test data” pattern command produces an 8,388,607 bit pseudo- random pattern. This pattern is generated by the DSP using the polynomial form $X^{23} + X^5 + 1$ and a 23-bit shift register with an initial value of 1. The 8,388,607 bit sequence is repeated thereafter as long is necessary to complete the test duration, this sequence lasts 131seconds at 128 kbps, 193 seconds at 96 kbps or 263 seconds at 32 kbps.
This pattern is applied to the DSP modulator for mapping to 16-FSK and pulse shaping with SRRC $a=0.4$.

Modulation Characteristic Part 2.1047 (d), 90.209 (b), 90.210(c): Other types of equipment: this equipment is not provided with hardware audio low-pass filters, the filtering is entirely the result of the DSP-based digital filter controlled by firmware in the modulation source.

TEST DATA Rule Part Number: 2.1033 (c)(14)

All applicable test data according to:

-Part 2: 2.1043 (b)(2), 2.1049

-Part 90, Subpart I: 90.209 and 90.210(c),(d)

are provided in next section of this Engineering Report

The following reports have been generated for Class II Permissive Change request for EOTBDD4T85-1 Transmitter.

Paragon 3 is comprised of the Tait Electronics Ltd. T85M –1Y UHF Base station with the Dataradio Inc NextGen Base Data Link Controller (BDLC). Dataradio Inc does the changes to fit the transmitter to digital modulation, does final assembly and markets the Paragon3 unit.

Unless otherwise noted, all of the measurements were conducted following the procedures set forth in the TIA/EIA-603 revA standards.

SECTION 2 - TEST REPORT Rule Part Number: 2.1033 (c)(14)

NAME OF TEST: Emission Designator

RULE PART NUMBER: 2.201, 2.202, 2.1033 c (14), 2.1049 (h), 2.1041

For the SRRC N FSK type of emission, a Paragon 3 base station controller was the source of the digital modulation signals. The random signal generator passes the test sequence through a DSP-based digital SRRC filter to feed the FM modulator. The necessary bandwidth calculation for this type of modulation (SRRC16FSK) is not covered by paragraphs (1), (2) or (3) from 2.202(c), the result exceeding by far the real necessary bandwidth obtained through measurement of the 99% of the occupied bandwidth.

Therefore, the approach outlined in (2.202(c)(4)) is applicable in this case.

Necessary Bandwidth Measurement (90.209.(b))

The results of 99% Occupied Bandwidth measurement are:

Bit rate/channel	V _{pp} analog voltage ref	Ref. deviation for 1kHz tone	Maximum Digital Deviation	Occupied Bandwidth ¹⁾	Emission designator
64000 bps/25kHz	1.156 V _{pp}	± 4.10 kHz	± 6.20 kHz	16500 Hz	16K5F1D
576000bps/25kHz	1.219 V _{pp}	± 4.20 kHz	± 6.40 kHz	16130 Hz	16K2F1D
32000bps/12.5kHz	0.637V _{pp}	±2.10 kHz	± 2.80 kHz	8417 Hz	8K50F1D
28800bps/12.5kHz	0.658V _{pp}	± 2.20 kHz	± 3.20 kHz	8670 Hz	8K67F1D

¹⁾ –Annex A supplies supporting plots for these values. The deviation meter has an IF filter bandwidth of 30kHz. The set-up explanations follow.

Occupied Bandwidth Measurement

The Occupied Bandwidth measurement option of the instrument (8563EC spectrum analyzer from Agilent) calculates and provides the values used above for the emission designator.

The percentage setting of the measurement has been set to 99% following the definition of the **Occupied Bandwidth** as “the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission” (FCC 2.202) .

The measurement has been performed during the tests for compliance with mask C or D, the highest resulting value was recorded for the Occupied Bandwidth. V_{pp} amplitude of the modulating signal applied to exciter input was measured between input and ground, AC coupled at the output of Paragon 3.

The measurement set-up is detailed along with mask compliance test reports.

250% Auth BW 43 + 10*log(P)
Corner Points:
f₀ to 5.0 kHz Attenuation = 0 dB
>5.0 kHz to 10.0 kHz Attenuation= 0 dB to 25 dB
>10.0 kHz to 15.0 KHz Attenuation = 27.8 dB to 38 dB
>15.0 kHz to 20.0 KHz Attenuation = 38 dB to 45.2 dB
>20.0 kHz to 24.0 KHz Attenuation = 45.2 dB to 50 dB
>24.0 kHz to 50.0 KHz Attenuation = 50 dB
>250% Auth BW Attenuation = minimum 63 dB (100 W)

TEST RESULTS: Meets minimum standard (see data on the following pages)
TEST CONDITIONS: Standard Test Conditions, 25 C
TEST EQUIPMENT: Attenuator, BIRD Model / 100-A-FFN-10 / 10 dB / 100 Watt
Attenuator, BIRD Model / 50-A-MFN-30 / 30 dB / 50 Watt
DC Power Supply, Astron Model VS-20M
IFR COM-120B- communication analyzer used for deviation meter
Spectrum analyzer HP(Agilent) 8563EC
HP power meter model#E4418B
HP Benchlink -software for plot captures.

TEST SET-UP:

NAME OF TEST: Mask compliance data (Continued)
Paragon3 Modem at 57600 bps 16FSK

MASK: C, 14400baud, 4.2kHz dev, 20 W

OUTPUT POWER: 20 Watts
57600 bps, 16 level FSK
PEAK DEVIATION = 6400 Hz
SPAN = 200 kHz

MASK: C, 14400baud, 4.2kHz dev, 100 W

OUTPUT POWER: 100 Watts

57600 bps, 16 level FSK

PEAK DEVIATION = 6400 Hz

SPAN = 200 kHz

NAME OF TEST: Mask compliance data for
Paragon3 Modem at 64000 bps 16 FSK

Mask compliance data in support of support of 64000 bps 16000 baud 16 FSK

RULE PART NUMBER: 2.201, 2.202, 2.1033 c (14), 2.1049 (h), 2.1041, 90.209 (b)(5), 90.210 (c)

MINIMUM STANDARD: Mask C
Sidebands and Spurious [Rule 90.210 (c)]
Authorized Bandwidth = 20 kHz [Rule 90.209(b) (5)]
Fo to 5.0 kHz Attenuation = 0 dB
>5.0 kHz to 10.0 kHz Attenuation= 83*log(f_d KHz /5) dB
>10.0 kHz to 250% Auth BW Attenuation = Lesser of: 50dB or
29 log (fd/11)dB,
250% Auth BW 43 + 10*log(P)
Corner Points:
f₀ to 5.0 kHz Attenuation = 0 dB
>5.0 kHz to 10.0 kHz Attenuation= 0 dB to 25 dB
>10.0 kHz to 15.0 KHz Attenuation = 27.8 dB to 38 dB
>15.0 kHz to 20.0 KHz Attenuation = 38 dB to 45.2 dB
>20.0 kHz to 24.0 KHz Attenuation = 45.2 dB to 50 dB
>24.0 kHz to 50.0 KHz Attenuation = 50 dB
>250% Auth BW Attenuation = minimum 63 dB (100 W)

TEST SET-UP:

NAME OF TEST: Mask compliance data (Continued)
Paragon3 Modem at 64000 bps 16FSK

MASK: C, 16000baud, 4.1kHz dev, 20 W

SPECTRUM FOR EMISSION 16K5F1D

OUTPUT POWER: 20 Watts

64000 bps, 16 level FSK

PEAK DEVIATION = 6200 Hz

SPAN = 200 kHz

MASK: C, 16000baud, 4.1kHz dev, 100 W

OUTPUT POWER: 100 Watts

64000 bps, 16level FSK

PEAK DEVIATION = 6200 Hz

SPAN = 200 kHz

Annex : LIST OF THE TEST EQUIPMENT:

Equipment	Manufacturer and model	serial number	inventory
Digital pseudo-random sequence generator	Dataradio Paragon 3 BDLC software commands	NA	R&D firmware DSP
Attenuator 10 dB / 150 Watt	BIRD Model / 150-A-FFN-10	NA	NA – R&D
Attenuator 30 dB / 50 Watt	BIRD Model / 50-A-MFN-30	NA	DR998
Communication Analyzer (used for Modulation Analyzer)	IFR COM120B	500008432	DR611
Spectrum Analyzer	HP(Agilent) 8563EC	4103A01135	DR231
DC Power Source 13.8V 25A	Tait T808-10-0012 from the T800 base station assembly	13073482	NA – R&D
DC Power Source 13.8V 15A	Tait T807-10-0012 from the T800 base station assembly	13072356	NA – R&D
Oscilloscope	HP 54645D – Mega Zoom digital mixed signal oscilloscope	US38060758	DR222
