

STRFGWX

The STRFGWX is a two-way radio frequency (RF) gateway/transceiver that communicates with Crestron's wireless STX-1550C 2-Way RF Compact Color Touchpanels. The STRFGWX receives RF signals from touchpanels and translates the signals into commands for transmission over the Crestron remote control system. Feedback signals from the Cresnet system are transmitted from the STRFGWX to the touchpanel for real-time confirmation of commands.
