## FCC §1.1307(b) & §2.1091 – RF EXPOSURE EVALUATION

## **Applicable Standard**

According to KDB 447498 D04 Interim General RF Exposure Guidance v01, clause 2.1.4 -MPE-Based Exemption:

Report No.: RA221201-58517E-RFA

An alternative to the SAR-based exemption is provided in § 1.1307(b)(3)(i)(C), for a much wider frequency range, from 300 kHz to 100 GHz, applicable for separation distances greater or equal to  $\lambda/2\pi$ , where  $\lambda$  is the free-space operating wavelength in meters. The MPE-based test exemption condition is in terms of ERP, defined as the product of the maximum antenna gain and the delivered maximum time-averaged power. For this case, a RF source is an RF exempt device if its ERP (watts) is no more than a frequency-dependent value, as detailed tabular form in Appendix B. These limits have been derived based on the basic specifications on Maximum Permissible Exposure (MPE) considered for the FCC rules in § 1.1310(e)(1).

Table to § 1.1307(b)(3)(i)(C) - Single RF Sources Subject to Routine Environmental Evaluation

| RF Source<br>frequency<br>(MHz) | Threshold ERP<br>(watts)               |
|---------------------------------|--|
| 0.3-1.34                        | 1,920 R <sup>2</sup> .                 |
| 1.34-30                         | 3,450 R <sup>2</sup> /f <sup>2</sup> . |
| 30-300                          | 3.83 R <sup>2</sup> .                  |
| 300-1,500                       | 0.0128 R <sup>2</sup> f.               |
| 1,500-100,000                   | 19.2R <sup>2</sup> .                   |

f = frequency in MHz;

R = minimum separation distance from the body of a nearby person (appropriate units, e.g., m);

For multiple RF sources: Multiple RF sources are exempt if:

in the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation:

$$\sum_{i=1}^{a} \frac{P_i}{P_{th,i}} + \sum_{j=1}^{b} \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

## Result

| Mode | Frequency<br>(MHz) | Tune up conducted power | Antenna Gain |       | ERP   |       | Evaluation<br>Distance | MPE-Based<br>Exemption |
|------|--------------------|-------------------------|--------------|-------|-------|-------|------------------------|------------------------|
|      |                    | (dBm)                   | (dBi)        | (dBd) | (dBm) | (mW)  | (m)                    | Threshold (mW)         |
| BT   | 2402-2480          | 5.0                     | 0            | -2.15 | 2.85  | 1.928 | 0.2                    | 768                    |
| DECT | 1920-1930          | 20.0                    | 0            | -2.15 | 17.85 | 60.95 | 0.2                    | 768                    |

Report No.: RA221201-58517E-RFA

Note 1: The tune-up power was declared by the applicant.

Note 2: 0dBd=2.15dBi.

Note 3: The DECT function can transmit at the same time with the BT function.

Simultaneous transmitting consideration (worst case):

The ratio=  $ERP_{DECT}/limit+ERP_{BT}/limit=60.95/768+1.928/768=0.082 \le 1.0$ 

**Result: Compliant.**
