

Changes made on VTech 2418 Base (Tx: 2.4GHz; Rx: 900MHz)

Date : May 14, 2002

FCC ID : EW780-5125-B01 (Base only)

Original model with grant : AT&T 1430

Modification made on model : VTech 2418

Reason for the change

Due to the cosmetic design outlook limitation, the basic unit has to use 2-port RF module which is different from that of AT&T 1430 (one port). The design basically is similar expect there are 2 port. One is 2.4G TX port while the other is 900M RX port.

Note: refer to the schematic diagrams (before & after change) in “1 port base RF.pdf” & “2 port base RF.pdf”
