LS6117
Security Code Information for LS6117

• The length of Handset security code is 40 bits

• The length of Base security code is 40 bits.

• The total number of possible discrete digital codes is 2^{40} . This is equal to 109,951,162,776
   different combinations.

• Each Handset or Base unit has a unique security code.

• Generation of the security code is by employing a random code approach. During
  manufacturing, the code will be generated and programmed into the EEPROM of
the unit.
