LIFTER AUDIO ADJUST

Adjust the switch to choose the best headset audio quality when using a handset lifter. (See the handset lifter user's manual for more information. You may download the manual at

www.telephones.att.com.)

VOLUME ▲▼

Press the volume keys on the side of the headset base to adjust the speaking volume when on a call.

MODE

Press to choose between the **NO LIFTER** or **LIFTER MODE** when the headset is not in use. The corresponding light will come on (see page 20).

Installation preparation

You must install and charge the battery before using the headset.

See pages 10-11 for easy instructions.

If you subscribe to high-speed Internet service (Digital Subscriber Line - DSL) through your telephone lines, you must install a DSL filter between the telephone line cord and the telephone wall jack. The filter will prevent noise and caller ID problems caused by DSL interference. Please contact your DSL service provider for more information about DSL filters.

For customer service or product information, visit our website at **www.telephones.att.com** or call **1 (800) 222-3111**. In Canada, dial **1 (866) 288-4268**.

Avoid placing the headset base too close to:

- Communication devices such as: television sets, VCRs, or other cordless telephones.
- Excessive heat sources.
- Noise sources such as a window with traffic outside, motors, microwave ovens, refrigerators, or fluorescent lighting.
- Excessive dust sources such as a workshop or garage.
- Excessive moisture.
- Extremely low temperature.
- Mechanical vibration or shock such as on top of the washing machine or work bench.

Headset base installation

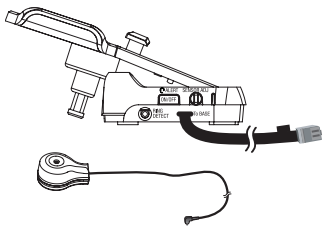

IMPORTANT: If you purchased model TL7611, see the TL7000 handset lifter manual for installation instructions.

Optional accessories

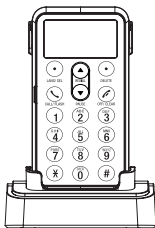

It is recommended that you install a handset lifter (model TL7000) and/or a dial pad (model TL7601) with your headset. The following optional accessories are compatible with your headset and base:

- The TL7000 is a handset lifter with ring detector.
- The TL7601 is a dial pad that allows you to dial numbers and place calls without being near your telephone. The dial pad will also allow you to use the headset as a stand-alone product without needing a connection to a telephone.
- The TL7600 is an expansion headset (up to two headsets can be used with the headset base).

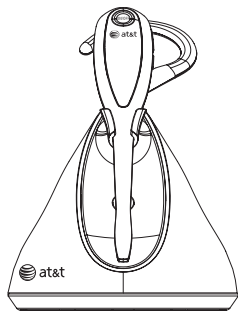

Visit our website **www.telephones.att.com** for more information about these products or to download user manuals.

TL7601

TL7600

Headset base installation

If you are installing the headset base with neither the lifter nor the dial pad, there are two installation options:

Option 1: You may use the headset as a stand-alone product without a phone.

- You will only be able to receive calls. If you want to make calls, an accessory dial pad (model TL7601, sold separately) is required.
- The headset base and headset do not have an external ringer. When you receive calls, the headset earpiece will play ring tone. If you have telephones connected to the same telephone line as the headset base, you can rely on the ringers of those telephones to alert you to incoming calls.

-OR-

Option 2: You may use the headset with a corded or cordless phone.

If you subscribe to high-speed Internet service (Digital Subscriber Line - DSL) through your telephone lines, you must install a DSL filter between the telephone base and the telephone wall jack. The filter will prevent noise and caller ID problems caused by DSL interference. Please contact your DSL service provider for more information about DSL filters.

Headset base installation

Before installing the headset base:

Remove the rear bottom piece of the headset base by pushing it away from the base (as shown in Figure 1).

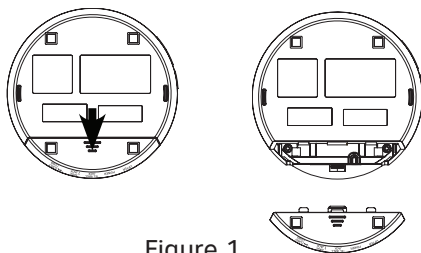

Figure 1

Install the headset base as shown on the following pages.

After completing installation option 1 or 2:

Slide the rear bottom piece towards the base until it clicks into place (as shown in Figure 2).

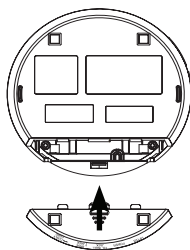

Figure 2

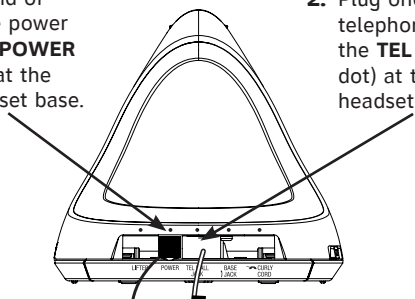

Headset base installation

Option 1: Headset base stand-alone installation (TL7610)

With this installation, you can receive calls only.

1. Plug the small end of the headset base power adapter into the **POWER** jack (green dot) at the back of the headset base.

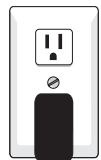

2. Plug one end of the telephone line cord into the **TEL WALL JACK** (red dot) at the back of the headset base.

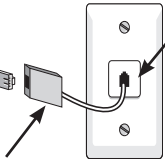

Telephone line cord

3. Plug the other end of the telephone line cord into a telephone jack.

4. Plug the headset base power adapter into an electrical outlet not controlled by a wall switch.

DSL filter (not included) required if you have DSL high-speed Internet service.

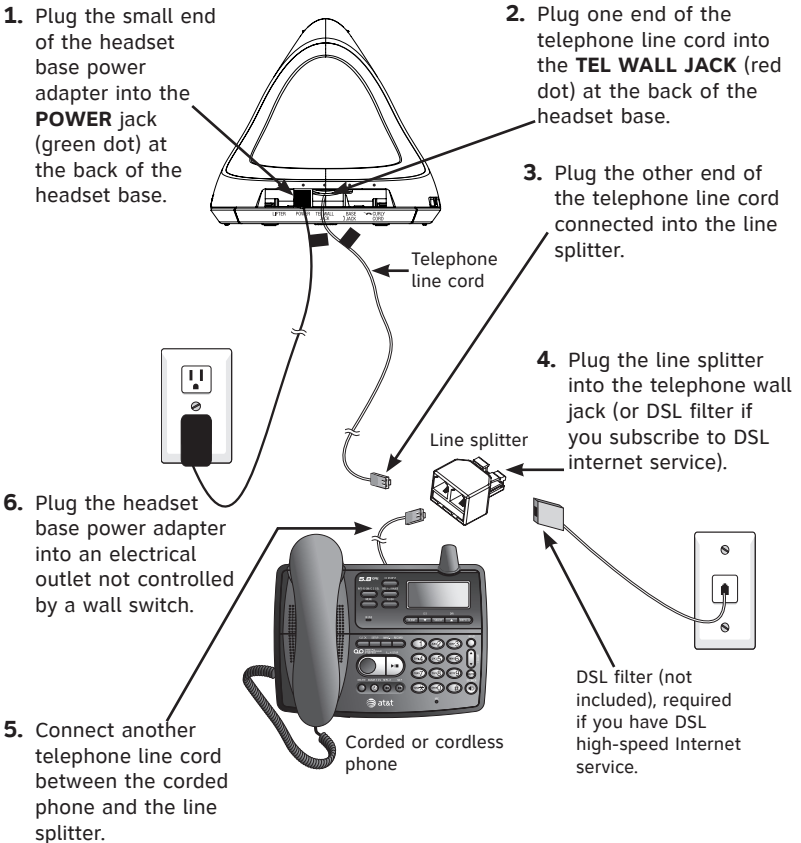

NOTE: For more information about the accessory dial pad (model TL7601), visit our website www.telephones.att.com.

Headset base installation

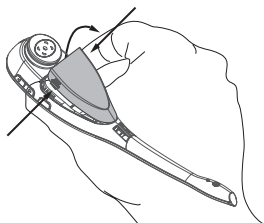

Option 2: Headset base with corded or cordless phone (any brand) installation (TL7610)

With this installation, you can make and receive calls using the corded or cordless phone.

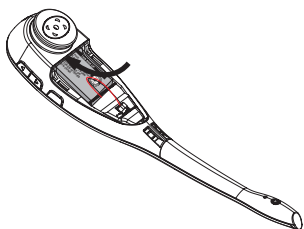

Battery installation

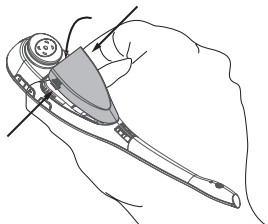

Install the battery as shown below. After installing the battery, you may be able to make and receive short calls. For optimal performance, charge the headset battery for at least six hours before use. When not in use, recharge the headset by returning it to the headset base.

1. Press in on both sides of the battery compartment cover and lift the cover up and off.

2. Insert the battery into the battery compartment.
3. Push the battery plug into the connector inside the compartment and lay the wires flat on top of the battery.

4. Insert the tab on the bottom of the battery cover into the battery compartment. Press down gently on the battery cover until it snaps into place.

NOTE: Remove the ear hook from the headset (see page 14) before battery replacement.
