Application For 47 CFR Part 15: 2010 Certification RSS-213 Issue 2, December 2005 Equipment Certification

Unlicensed Personal Communication Service Devices/ 2 GHz License-exempt Personal Communications Service Devices

FCC ID: EW780-8523-01 Headset Unit of Model: TL7810, TL7812, TL7800, TL7910, TL7912, TL7900, HC8810, HC8812, HC8800

IC: 1135B-80852300 Headset Unit of Model: TL7810, TL7812, TL7800, TL7910, TL7912, TL7900, HC8810, HC8812, HC8800

Test Report Number: HK12050056-3

Issue Date: June 14, 2012

MN/KY

- The test report only allows to be revised within the retention period unless further standard or the requirement was noticed.

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

## **Table of Contents**

# EXHIBIT 2 GENERAL DESCRIPTION

### 2.0 General Description

#### 2.1 Product Description

The TL7912 is a 1.9GHz Digital Modulation Cordless Phone with Headset - Headset Unit. It operates at frequency range of 1921.536MHz to 1928.448MHz with 5 channels (1921.536MHz, 1923.264MHz, 1924.992MHz, 1926.720MHz and 1928.448MHz). The Headset is powered by a "Li-ion Polymer" type rechargeable battery pack (3.7V, 240mAh).

The antenna used in headset is integral, and the test sample is a prototype.

The Model(s): TL7810, TL7812, TL7910, HC8810 and HC8812 are the same as the Model: TL7912 in electronics/electrical designs, including software & firmware, PCB layout and construction design/Physical design/Enclosure. The only differences between these models are color, model number, package configuration and material to be sold for marketing purpose.

The Model: TL7800, TL7900 and HC8800 are one Headset with an external charger for selling. The difference in model number serves as the marketing strategy.

#### 2.2 Technical Description

The circuit description and digital modulation techniques description are saved as filename: descri.pdf.

#### 2.3 Test Methodology

The radiated emission measurement for unintentional radiator (if any) was performed according to the test procedures specified in ANSI C63.4 (2009). The radiated emission measurements for intentional radiator contained in UPCS device, conducted emission measurements, Listen Before Transmit (LBT) tests, Time Frame and Frequency Stability tests were performed according to the test procedures specified in ANSI C63.17 (2006). All radiated measurements were performed in Open Area Test Sites. Preliminary scans were performed in the Open Area Test Sites only to determine worst case modes. All radiated tests were performed at an antenna to EUT distance of 3 meters, unless stated otherwise in the "Justification Section" of this Application. All other measurements were made in accordance with the procedures in 47 CFR Part 2 / RSS-Gen Issue 3 (2010).

#### 2.4 Test Facility

The open area test site and conducted measurement facility used to collect the emission data is located at Garment Centre, 576 Castle Peak Road, Kowloon, Hong Kong. This test facility and site measurement data have been fully placed on file with the FCC and the Industry Canada.

## EXHIBIT 3 SYSTEM TEST CONFIGURATION

### 3.0 System Test Configuration

#### 3.1 Justification

For emissions testing, the equipment under test (EUT) was set up to transmit continuously in burst mode with pseudo-random data to simplify the measurement methodology. Care was taken to ensure proper power supply voltages during testing. During testing, all cables (if any) were manipulated to produce worst-case emissions. The Headset (if any) was powered by a fully charged battery.

For the measurements, the EUT was attached to a plastic stand if necessary and placed on the wooden turntable. If the base unit attached to accessories, they were connected and operational (as typical as possible).

The signal was maximized through rotation and placement in the three orthogonal axes. The antenna height and polarization were varied during the search for maximum signal level. The antenna height was varied from 1 to 4 meters. Detector function was in peak mode. Radiated emissions are taken at three meters unless the signal level was too low for measurement at that distance. If necessary, a pre-amplifier was used and/or the test was conducted at a closer distance.

For UPCS transmitter radiated measurement, the spectrum analyzer resolution bandwidth was approximately 1% of EUT emission bandwidth, unless otherwise specified.

Radiated emission measurements for UPCS transmitter were performed from the lowest radio frequency signal generated in the device which is greater than 9 kHz to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

### 3.2 Conducted Emission Test Configuration

The setup and equipment setting were made in accordance with ANSI C63.17. The antenna of EUT transmitter was replaced by a coaxial cable. The impendence matching of connection, cable loss and external RF attenuator are taken into account. The EUT was arranged to communicate via a fixed carrier frequency between its transmitter and a companion device. The transmission was configured in burst mode with pseudo-random data as typical as normal operation.

### 3.3 Conducted Monitoring and Operational Test Configuration

Figure 3.3.1

### 3.4 EUT Exercising Software

The EUT exercise program (if any) used during radiated and conducted testing was designed to exercise the various system components in a manner similar to a typical use.

#### 3.5 Details of EUT and Description of Accessories

#### Details of EUT:

An AC adaptor and/or a battery (provided with the unit) were used to power the device. Their descriptions are listed below.

(1) Headset: A "Li-ion Polymer" type rechargeable battery pack (3.7V, 240mAh) (Supplied by Client)

Description of Accessories:

- (1) Base Unit, Model: TL7912, FCC ID: EW780-8523-00, IC:1135B-80852300 (Supplied by Client)
- 3.6 Measurement Uncertainty

When determining of the test conclusion, the Measurement Uncertainty of test has been considered.

Uncertainty and Compliance - Unless the standard specifically states that measured values are to be extended by the measurement uncertainty in determining compliance, all compliance determinations are based on the actual measured value.

# EXHIBIT 4 MEASUREMENT RESULTS

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

#### 4.0 Measurement Results

4.1 Antenna Requirement, FCC Rule 15.317 / RSS-Gen Clause 7.1.2:

EUT must meet the antenna requirement of FCC Rule 15.203 / RSS-Gen Clause 7.1.2.

- [x] EUT uses permanently attached antenna(s) which is considered sufficient to comply with the provisions of this rule. Please refer to internal photos.pdf for more details.
- [ ] EUT uses unique antenna jack(s) or electrical connector(s) which is considered sufficient to comply with the provisions of this rule. Please refer to internal photos.pdf for more details.
- 4.2 Digital Modulation Techniques, FCC Rule 15.319(b) / RSS-213 Clause 6.1:

All transmissions must use only digital modulation techniques.

The requirements are made in accordance with ANSI C63.17 sub-clause 6.1.4.

Attestation:

Please refer to the technical description(descri.pdf) or relevant DECT standards for more details.

Company: VTech Telecommunications Ltd. Model: TL7912

Date of Test: May 10 - June 14, 2012

4.3 Emission Bandwidth, FCC Rule 15.323(a) / Occupied Bandwidth, RSS-213 Clause 6.4:

Operation shall be contained within the 1920 - 1930 MHz band. The emission bandwidth (*B*) shall be less than 2.5 MHz and greater than 50 kHz.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.1.3 and RSS-Gen clause 4.6.1.Test setup is shown in section 3.2 Figure 3.2.1.

Test Results:

I. Headset - Traffic Carrier

Channel	Channel Frequency (MHz)	Measuring Signal Level	Measured Emission Bandwidth (MHz)	Results
Lowest	1921.536	26 dB down	1.48	Pass
Middle	1924.992	99% Bandwidth	1.20	Pass
Highest	1928.448	26 dB down	1.47	Pass

The plots of emission bandwidth and occupied bandwidth and test frequency are saved as filename: bw.pdf

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.4 Directional Gain of the Antenna, FCC Rule FCC 15.319(e) / RSS-213 Clause 4.1(e):

The peak transmit power shall be reduced by the amount in dB that the maximum directional gain of the antenna exceeds 3 dBi.

The requirements are made in accordance with ANSI C63.17 sub-clause 4.3.1 / RSS-213 Clause 4.1(e).

- [x] Manufacturer declares that the directional gain of the antenna is less than or equal to 3dBi. No peak transmit power reduction is required.
- [ ] Manufacturer declares that the directional gain of the antenna is greater than 3dBi. The peak transmit power shall be reduced by \_\_\_\_\_ dB.

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.5 Peak Transmit Power, FCC Rule 15.319(c) / RSS-213 Clause 6.5:

The peak transmit power ( $P_{EUT}$ ) shall not exceed 100µW multiplied by the square root of the emission bandwidth / occupied bandwidth (*B*) in Hz or 5 log<sub>10</sub> *B* – 10 dBm. The peak transmit power shall be reduced by the amount in dB that the maximum directional gain of the antenna exceeds 3 dBi.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.1.2. Test setup is shown in section 3.2 Figure 3.2.1. The cable loss and/or external attenuation are included in OFFSET function of spectrum analyzer.

Calculation of Peak Transmit Power Limit (*P*<sub>max</sub>):

[×]	$P_{\rm max} = 5 \log_{10} B - 10  \rm dBm$	when $G_A \leq 3dBi$
[]	<i>P</i> <sub>max</sub> = 5 log <sub>10</sub> <i>B</i> − 10 dBm − (G <sub>A</sub> − 3dBi)	when G <sub>A</sub> > 3dBi

Where  $G_A$  = EUT Antenna Gain: <u>0</u> dBi for Headset

*B* = Measured Emission Bandwidth / Occupied Bandwidth

Test Results:

I. Headset -	Traffic Carrier
--------------	-----------------

1. 110000001 110				
Channel	Channel Frequency (MHz)	Measured Peak Transmit Power (dBm)	Limit (dBm)	Results
Lowest	1921.536	19.04	20.85	Pass
Middle	1924.992	19.04	20.40	Pass
Highest	1928.448	18.95	20.84	Pass

The plots of peak transmit power are saved as filename: peaktp.pdf

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.6 Power Spectral Density, FCC Rule 15.319(d) / RSS-213 Clause 6.6:

Power spectral density shall not exceed 3 mW (4.8dBm) in any 3 kHz bandwidth as measured with a spectrum analyzer having a resolution bandwidth of 3 kHz.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.1.5. Test setup is shown in section 3.2 Figure 3.2.1.

Test Results:

I. Headset - Traffic Carrier

Channel	Channel Frequency (MHz)	Measured Power Spectral Density (dBm/3kHz)	Limit (dBm/3 kHz)	Results
Lowest	1921.536	-6.57	4.8	Pass
Middle	1924.992	-10.60	4.8	Pass
Highest	1928.448	-11.70	4.8	Pass

The plots of the power spectral density are saved as filename: psd.pdf

Company: VTech Telecommunications Ltd. Model: TL7912

Date of Test: May 10 - June 14, 2012

4.7 Automatic Discontinuation of Transmission, FCC Rule 15.319(f) / RSS-213 Clause 4.3.4(a):

The EUT shall automatically discontinue transmission in case of either absence of information to transmit or operational failure. These provisions are not intended to preclude transmission of control and signaling information or use of repetitive codes used by certain digital technologies to complete frame or burst intervals.

The manufacturer declares that the EUT can automatically discontinue transmission in case of either absent information to transmit or operational failure. Please refer to the declaration letter (declaration.pdf) for details.

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.8 Unwanted Emission Inside the Sub-Band, FCC Rule 15.323(d) / RSS-213 Clause 6.7.2:

Emissions inside the sub-band must comply with the following emission mask:

- 1. In the bands between 1*B* and 2*B* measured from the center of the emission bandwidth, emission shall be at least 30 dB below the permitted peak transmit power.
- 2. In the bands between 2*B* and 3*B* measured from the center of the emission bandwidth, emission shall be at least 50 dB below the permitted peak transmit power.
- 3. In the bands between 3*B* and the band edge, emission shall be at least 60 dB below the permitted peak transmit power.

Where B = emission bandwidth or occupied bandwidth in Hz

Measurements are made in accordance with ANSI C63.17 sub-clause 6.1.6.1. Test setup is shown in section 3.2 Figure 3.2.1.

Test Results:

Channel	Channel Frequency (MHz)	Results
Lowest	1921.536	Pass
Middle	1924.992	Pass
Highest	1928.448	Pass

#### I. Headset - Traffic Carrier

The plots of the unwanted emission inside the sub-band are saved as filename: inband.pdf

Company: VTech Telecommunications Ltd. Model: TL7912

Date of Test: May 10 - June 14, 2012

4.9 Emissions Outside the Sub-Band, FCC Rule 15.323(d) / RSS-213 Clause 6.7.1:

Emissions outside the sub-band shall be attenuated below a reference power of 112 mW (20.5 dBm) as follows:

- 1. 30 dB between the band edge and 1.25 MHz above or below the band;
- 2. 50 dB between 1.25 and 2.5 MHz above or below the band; and
- 3. 60 dB at 2.5 MHz or greater above or below the band, or shall meet the requirement of FCC Rule 15.319(g) which shall not exceed the limits of FCC Rule 15.209 / RSS-210 Clause 2.5.

Example: Calculation of Limit for emissions between the band edge and 1.25 MHz (1920.000 – 1918.750 MHz)

The emissions shall not exceed the Limit: 20.5 dBm - 30 dB = -9.5 dBm

Measurements are made in accordance with ANSI C63.17 sub-clause 6.1.6.2. Radiated emissions test method is used. Emissions that are directly caused by digital circuits in the transmit path and transmitter portion are measured.

Channel	Carrier Frequency (MHz)	Measured Band (MHz)	Limit (dBm)	Results
		1920.000 - 1918.750	-9.5	Pass
		1918.750 - 1917.500	-29.5	Pass
Lowest	1921.536	0.009 - 1917.500 & 1932.500 - 19300.000	-39.5 / FCC Rule 15.209 / RSS-210 Clause 2.5	Pass
		1930.000 - 1931.250	-9.5	Pass
		1931.250 - 1932.500	-29.5	Pass
Highest	1928.448	0.009 – 1917.500 & 1932.500 - 19300.000	-39.5 / FCC Rule 15.209 / RSS-210 Clause 2.5	Pass

Test Results:

Company: VTech Telecommunications Ltd. Model: TL7912 Mode: Transmission Date of Test: May 10 - June 14, 2012

4.9.1 Radiated Emissions Configuration Photographs:

Worst Case Radiated Emission at

### 7686.144 MHz

The worst case radiated emission configuration photographs are saved as filename: config photos.pdf

4.9.2 Radiated Emissions Data:

Data are included of the worst case configuration (the configuration which resulted in the highest emission levels). A sample calculation, configuration photographs and data tables of the emissions are included. All measurements were performed with peak detection unless otherwise specified.

The data in table1-3 list the significant emission frequencies, the limit and the margin of compliance.

Judgement:

Passed by 0.5 dB margin

Company: VTech Telecommunications Ltd. Model: TL7912 Mode: Transmission Date of Test: May 10 - June 14, 2012

4.9.3 Field Strength Calculation

The field strength is calculated by adding the reading on the Spectrum Analyzer to the factors associated with preamplifiers (if any), antennas, cables, pulse desensitization and average factors (when specified limit is in average and measurements are made with peak detectors). A sample calculation is included below.

FS = RA + AF + CF - AG + PD + AV

Where FS = Field Strength in  $dB\mu V/m$  RA = Receiver Amplitude (including preamplifier) in  $dB\mu V$  CF = Cable Attenuation Factor in dB AF = Antenna Factor in dB AG = Amplifier Gain in dB PD = Pulse Desensitization in dBAV = Average Factor in -dB

In the radiated emission table which follows, the reading shown on the data table may reflect the preamplifier gain. An example of the calculations, where the reading does not reflect the preamplifier gain, follows:

FS = RA + AF + CF - AG + PD + AV

Example

Assume a receiver reading of 62.0 dB $\mu$ V is obtained. The antenna factor of 7.4 dB and cable factor of 1.6 dB is added. The amplifier gain of 29.0 dB is subtracted. The pulse desensitization factor of the spectrum analyzer is 0.0 dB, and the resultant average factor is -10.0 dB. The net field strength for comparison to the appropriate emission limit is 32.0 dB $\mu$ V/m. This value in dB $\mu$ V/m is converted to its corresponding level in  $\mu$ V/m.

RA =  $62.0 \text{ dB}\mu\text{V}$ AF = 7.4 dBCF = 1.6 dBAG = 29.0 dBPD = 0.0 dBAV = -10 dB

 $FS = 62.0 + 7.4 + 1.6 - 29.0 + 0.0 + (-10.0) = 32.0 \text{ dB}\mu\text{V/m}$ 

Level in  $\mu$ V/m = Common Antilogarithm [(32.0 dB $\mu$ V/m)/20] = 39.8  $\mu$ V/m

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

- 4.9.4 Average Factor Calculation and Transmitter ON Time Measurements, FCC Rule 15.35(b, c) / RSS-Gen cl 4.5
- [ ] The EUT antenna output port was connected to the input of the spectrum analyzer. The analyzer center frequency was set to EUT RF channel carrier. The SPAN function on the analyzer was set to ZERO. The transmitter ON time was determined from the resultant time-amplitude display:

Please refer to the attached plots for more details:

The plots of Transmitter ON Time Measurements are saved as filename: txon.pdf

- [ ] Please refer to the attached transmitter timing diagram that are provided by manufacturer
- [x] Not applicable No average factor is required.
- [] Please refer to Technical Description (descri.pdf) for more details

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.10 AC Power Line Conducted Emissions, FCC Rule 15.315 / RSS-213 Clause 6.3:

The AC power line conducted emission shall not exceed the limits of FCC Rule 15.207 / Table 4 in RSS-Gen Clause 7.2.4.

Measurements are made in accordance with ANSI C63.4 sub-clause 7. Emissions that are directly caused by digital circuits in the transmit path and transmitter portion are measured.

- [x] Not applicable EUT is only powered by battery for operation.
- [ ] EUT connects to AC power line. Emission Data is listed in following pages.
- [ ] Base Unit connects to AC power line and has transmission. Headset connects to AC power line but has no transmission. Emission Data of Base Unit is listed in following pages.
- [ ] Headset connects to AC power line (indirectly) only during charging. Emission Data is listed in following pages.

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.11 Radio Frequency Radiation Exposure, FCC Rule 15.319(i):

EUT is subject to the radio frequency exposure requirements specified in FCC Rule §§ 1.1307(b), 2.1091 and 2.1093. It shall be considered to operate in a "general population / uncontrolled" environment.

- [] Handset unit: EUT was evaluated for Specific Absorption Rate (SAR) evaluation compliance according to OET Bulletin 65, Supplement C (Edition 01-01). It is in compliance with the SAR evaluation requirements. A SAR test report was submitted at same time and saved as SAR Report.pdf.
- [x] Headset unit: EUT was exempted from SAR Test. The evaluation calculation results are saved as filename: Ear Bud SAR exemption.pdf
- [] Base unit: EUT was evaluated for Maximum Permissible Exposure (MPE) evaluation compliance according to OET Bulletin 65, Supplement C (Edition 01-01). The evaluation calculation results are saved as filename: RF exposure info.pdf.

The Routine RF Exposure Evaluation, Routine SAR Evaluation and Declaration of RF Exposure Compliance are saved as filename: RF exposure.pdf

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

- 4.13 Frame Repetition Stability, FCC Rule 15.323(e) / RSS-213 Clause 4.3.4(c):
- [ ] EUT implements Time Division Duplex (TDD) (not include TDMA) in order to support duplex connection on a given frequency carrier shall maintain a frame repetition rate whereby 3 x standard deviation of the frequency stability shall not exceed 50 ppm, not including a shift of the mean.
- [x] EUT uses Time Division Multiple Access (TDMA) in order to support multiple communication links on a given frequency carrier shall maintain a frame repetition rate whereby 3 x standard deviation of the frequency stability shall not exceed 10 ppm, not including a shift of the mean.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.2.2. Test setup is shown in section 3.2 Figure 3.2.1. A spectrum analyzer measures the time duration between rising edges of two consecutive frames over a time period of at least 1000 frame periods. These measurement values are used to compute the 3 x standard deviation of the frequency stability.

Test Results:

I. Headset

Maximum Frame Repetition Stability (ppm)	Limit (ppm)	Results
<0.0001	±10	Pass

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.14 Frame Period and Jitter, FCC Rule 15.323(e) / RSS-213 Clause 4.3.4(c):

The frame period (a set of consecutive time slots in which the position of each time slot can be identified by reference to a synchronizing source) of EUT operating in these sub-bands shall be 20 ms or 10 ms/X where X is a positive whole number.

The jitter (time-related, abrupt, spurious variations in the duration of the frame interval) introduced at the two ends of such a communication link shall not exceed 25  $\mu$ s for any two consecutive transmissions. Transmissions shall be continuous in every time and spectrum window during the frame period defined for EUT.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.2.3. Test setup is shown in section 3.2 Figure 3.2.1. A spectrum analyzer measures the time duration between the rising edges of two consecutive frames. The measurements are taken over 100,000 frames. These measurement values are used to compute mean value and the difference between any two consecutive frame periods. The mean value is the frame period.

Test Results:

I. Headset

Measured Maximum Jitter (µs)	Limit (µs)	Result

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.15 Carrier Frequency Stability, FCC Rule 15.323(f) / RSS-213 Clause 6.2:

The carrier frequency stability of EUT shall be maintained within +/-10 ppm at the following conditions:

- 1. Over 1 hour at nominal supply voltage and a temperature of +20 °C;
- 2. Over a variation in the primary supply voltage of 85 % to 115 % of nominal supply voltage at a temperature of +20 °C. This test does not apply to an EUT that is only powered by battery for operation;
- 3. Over a temperature variation of -20 °C to +50 °C or at extreme temperatures as declared by manufacturer, and at nominal supply voltage.

For Headset:

The nominal supply voltage: <u>3.7</u>VDC and the extreme temperatures of -20°C to +50°C are/is declared by manufacturer.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.2.1 The EUT and CMD60 is connected with shielded coaxial cable. The EUT is controlled by DECT Radio Communication Tester, CMD60, to use a fixed frequency channel during test as well as record the frequency offset. The transmission of EUT is in burst mode with pseudo-random data. Test setup is shown as follows.

Test Results:

Date of Test: May 10 - June 14, 2012

4.16 Monitoring Threshold:

Monitoring threshold can be relaxed according to FCC Rule 15.323(c)(9) / RSS-213 Clause 4.3.4(b)(9). EUT that has a power output lower than the maximum permitted under FCC Rule 15.319(c) / RSS-213 Clause 6.5 may increase their monitoring detection threshold by one decibel for each one decibel that the transmitter power is below the maximum permitted.

Calculation of Monitoring Threshold Limit:

Monitoring	g Three	shold ( <i>T</i> ) $\leq$ -174 + 10 log <sub>10</sub> <i>B</i> + <i>M</i> + <i>P</i> <sub>max</sub> - <i>P</i> <sub>EUT</sub> dBm $\leq$ 15 log <sub>10</sub> <i>B</i> - 184 + <i>M</i> - <i>P</i> <sub>EUT</sub> dBm
		$\leq 10 \log_{10} D - 104 + 10 - 1 EU   a D III$
Where	В	= Measured Emission Bandwidth or Occupied Bandwidth of Headset - FCC: <u>1.48</u> x10 <sup>6</sup> Hz IC: <u>1.20</u> x10 <sup>6</sup> Hz
	М	= 30 dB for Lower Monitoring Threshold ( $T_L$ ), or = 50 dB for Upper Monitoring Threshold ( $T_U$ )
	$P_{\max}$	= 5 log <sub>10</sub> <i>B</i> – 10 dBm
	$P_{\rm EUT}$	= Measured Peak Transmit Power of Headset - FCC: <u>19.04</u> dBm IC: <u>19.04</u> dBm

Calculated Monitoring Threshold Limits:

I. Headset

	FCC	IC
Lower Monitoring Threshold $(T_{\rm L} + U_{\rm M})$ in dBm	-74.5	-75.9
Upper Monitoring Threshold ( $T_{\rm U} + U_{\rm M}$ ) in dBm	-54.5	-55.9

NA - Not applicable

Company: VTech Telecommunications Ltd. Model: TL7912

Date of Test: May 10 - June 14, 2012

- 4.16.1 Lower Monitoring Threshold, FCC Rule 15.323(c)(2) / RSS-213 Clause 4.3.4(b)(2):
- [x] Not applicable EUT which supports at least of 40 duplex system access channels and implements Least Interfered Channel (LIC) algorithm is permitted to use an upper monitoring threshold. Please refer to the section 4.16.2 for more details.
- [] The lower monitoring threshold must not be more than 30 dB above the thermal noise power for a bandwidth equivalent to the emission bandwidth used by EUT.

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.1. Test setup is shown in section 3.3 Figure 3.3.1. The test is performed on the carrier closest to center of the band. RF signal generators apply uniform CW interference on all EUT carriers each at level  $T_L + U_M + 10$  dB. Then, the interference level is reduced uniformly on all carriers until the EUT can transmit. The interference level shall be lower than or equal to the threshold limit.

Test Results:

I. Headset

Measured Maximum Interference	Lower Monitoring Threshold Limit		Results
Level (dBm)	$(dBm) (T_L + U_M)$		
	FCC	IC	
NA	-74.5	-75.9	NA

NA - Not applicable

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

- 4.16.2 Least Interfered Channel, LIC, FCC Rule 15.323(c)(5) / RSS-213 Clause 4.3.4(b)(5):
- [ ] Not implemented EUT met lower monitoring threshold requirements. Please refer to the section 4.17.1 for more details
- [x] If access to spectrum is not available as determined by section 4.16.1 and a minimum of 40 duplex system access channels are defined for the EUT, the time and spectrum windows with the lowest power level below a monitoring threshold of 50 dB above the thermal noise power determined for the emission bandwidth may be accessed

Number of duplex channels per frequency channel	=	12
Number of frequency channel	=	5
Total Duplex Channels	=	60

Hence, the time and spectrum windows below upper monitoring threshold may be accessed.

#### 4.16.2.1 Upper Monitoring Threshold, FCC Rule 15.323(c)(5) / RSS-213 Clause 4.3.4(b)(5):

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.2. Test setup is shown in section 3.3 Figure 3.3.1. The test is performed on the carrier closest to center of the band. RF signal generators apply uniform CW interference on all EUT carriers each at level  $T_{\rm U} + U_{\rm M} + 10$  dB. Then, the interference level is reduced uniformly on all carriers until the EUT can transmit. The interference level shall be lower than or equal to the threshold limit.

Test Results:

I. Headset

Measured Maximum Interference Level (dBm)		Upper Monitoring Threshold Limit (dBm) $(T_{U} + U_{M})$	
	FCC	IC	Results

4.16.2.2 Least Interfered Channel (LIC) Selection, FCC Rule 15.323(c)(5) / RSS-213 Clause 4.3.4(b)(5):

The criteria are specified in section 4.16.2. In addition, the power measurement resolution for this comparison must be accurate to within 6 dB.

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.3. Test setup is shown in section 3.3 Figure 3.3.1. RF signal generators apply uniform CW interference on all EUT carriers except two carriers (designated  $f_1$  and  $f_2$ ), each at level  $T_U + U_M$  EUT can only transmit on these two carriers.

Company: VTech Telecommunications Ltd. Model: TL7912

Date of Test: May 10 - June 14, 2012

4.16.2.2 Least Interfered Channel (LIC) Selection, FCC Rule 15.323(c)(5) / RSS-213 Clause 4.3.4(b)(5): - Continued

Test Descriptions and Results:

#### I. LIC Procedure - Headset

	Test Descriptions	EUT transmits on	Results
1	Apply interference on $f_1$ at level $T_L + U_M + 7$ dB. Apply interference on $f_2$ at level $T_L + U_M$ . Initiate transmission. Verify transmission on $f_2$ . Terminate transmission. Repeat 5 times.	f <sub>2</sub>	Pass
2	Apply interference on $f_1$ at level $T_L + U_M$ . Apply interference on $f_2$ at level $T_L + U_M + 7$ dB. Initiate transmission. Verify transmission on $f_1$ . Terminate transmission. Repeat 5 times.	f <sub>1</sub>	Pass
3	Apply interference on $f_1$ at level $T_L + U_M + 1$ dB. Apply interference on $f_2$ at level $T_L + U_M - 6$ dB. Initiate transmission. Verify transmission on $f_2$ . Terminate transmission. Repeat 5 times.	f <sub>2</sub>	Pass
4	Apply interference on $f_1$ at level $T_L + U_M - 6$ dB. Apply interference on $f_2$ at level $T_L + U_M + 1$ dB. Initiate transmission. Verify transmission on $f_1$ . Terminate transmission. Repeat 5 times.	f <sub>1</sub>	Pass

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.16.2.3 Least Interfered Channel (LIC) Confirmation, FCC Rule 15.323(c)(5) / RSS-213 Clause 4.3.4(b)(5):

EUT utilizing the provision of FCC Rule 15.323(c)(5) / RSS-213 Clause 4.3.4(b)(5) must have monitored all access channels defined for its system within the last 10 s and must verify, within the 20 ms (40 ms for EUT designed to use a 20 ms frame period) immediately preceding actual channel access that the detected power of the selected time and spectrum windows is no higher than the previously detected value.

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.4. This test is performed in section 4.17 and 4.18.

Results:

The tests are reported in section 4.17 and 4.18.

4.16.2.4 Maximum Spectrum Occupancy, FCC Rule 15.323(c)(5) / RSS-213 Clause 4.3.4(b)(5):

No EUT or group of co-operating EUTs located within 1 meter of each other shall during any frame period occupy more than 6 MHz of aggregate bandwidth, or alternatively, more than one third of the time and spectrum windows defined by the EUT.

Attestation:

According to the technical description provided, the total number of the time and spectrum windows defined by the system is 5\*12 = 60.

During any frame period, the maximum number of time and spectrum windows occupied by the system will be 12, which is less than one third of the time and spectrum windows defined by the system.

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.17 Monitoring Time, FCC Rule 15.323(c)(1) / RSS-213 Clause 4.3.4(b)(1):

Immediately prior to initiating transmission, EUT must monitor the combined time and spectrum windows in which they intend to transmit for a period of at least 10 ms for EUT designed to use a 10 ms or shorter frame period, or at least 20 ms for EUT designed to use a 20 ms frame period.

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.4. Test setup is shown in section 3.3 Figure 3.3.1. RF signal generators apply uniform CW interference on all system carriers except two carriers (designated  $f_1$  and  $f_2$ ), each at level  $T_{\rm U} + U_{\rm M}$ . EUT can only transmit on these two carriers.

Test Descriptions and Results:

#### I. Headset

	Test Descriptions	EUT transmits on	Results
1	Apply interference on $f_1$ at level $T_{U} + U_{M}$ , and no interference on $f_2$ . Initiate transmission. Verify transmission on $f_2$ . Then, terminate transmission.	f <sub>2</sub>	Pass
2	Apply interference on $f_2$ at level $T_{U} + U_{M}$ , and remove interference from $f_1$ immediately. Also immediately initiate transmission but is at least 20 ms after interference on $f_2$ is applied. Verify transmission on $f_1$ .	<i>f</i> <sub>1</sub>	Pass

Company: VTech Telecommunications Ltd. Model: TL7912

Date of Test: May 10 - June 14, 2012

4.18 Maximum Transmit Period, FCC Rule 15.323(c)(3) / RSS-213 Clause 4.3.4(b)(3):

If no signal above the threshold level is detected, transmission may commence and continue with the same emission bandwidth in the monitored time and spectrum windows without further monitoring. However, occupation of the same combined time and spectrum windows by a EUT or group of co-operating EUTs continuously over a period of time longer than 8 hours is not permitted without repeating the access criteria.

EUT establishes a communication channel with its companion device, which occupies the duplex pair combined time and spectrum windows. Reference RF signal generator synchronized with the sample and then generated a pulse as a time frame reference. The centre frequency of spectrum analyzer was set to the carrier frequency and the SPAN was set to ZERO. The spectrum analyzer was used to monitor the time (reference to the time signal) and spectrum of the communication channel. The occupied time or spectrum of the communication channel shall be changed over a period of time no longer than 8 hours. For a EUT with a frame period of 10/X ms, no more than 2,880,000 X frames should be transmitted without a break.

Test setup is shown as follows:

Test Results:

Company: VTech Telecommunications Ltd. Date of Test: May 10 - June 14, 2012 Model: TL7912

#### 4.19 System Acknowledgement, FCC Rule 15.323(c)(4) / RSS-213 Clause 4.3.4(b)(4):

Once access to specific combined time and spectrum windows is obtained an acknowledgment from a system participant must be received by the initiating transmitter within one second or transmission must cease. Periodic acknowledgments must be received at least every 30 seconds or transmission must cease. Channels used exclusively for control and signaling information may transmit continuously for 30 seconds without receiving an acknowledgment, at which time the access criteria must be repeated.

Measurements are made in accordance with ANSI C63.17 sub-clause 8.1.1 and 8.2.1. Test setup is shown in section 3.3 Figure 3.3.1.

Test Results:

- 6 dB	NA	NA
- 12 dB	NA	NA

- A Could Transmit
- B Could not Transmit
- NA Not applicable

\*Remarks: Detailed Compliance Test was used to show the compliance of the EUT.

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.22 Maximum Reaction Time, FCC Rule 15.323(c)(7).2 / RSS-213 Clause 4.3.4(b)(7).2:

The monitoring system bandwidth must have a maximum reaction time less than 50 x SQRT (1.25/emission bandwidth *B* in MHz)  $\mu$ s for signals at the applicable threshold level but shall not be required to be less than 50  $\mu$ s. If a signal is detected that is 6 dB or more above the applicable threshold level, the maximum reaction time shall be 35 x SQRT (1.25/emission bandwidth *B* in MHz)  $\mu$ s but shall not be required to be less than 35  $\mu$ s.

Measurements are made in accordance with ANSI C63.17 sub-clause 7.5. Test setup is shown in section 3.3 Figure 3.3.1.

Test Results:

	Test	Reaction of EUT	Results
1	With Interference Pulse = 50μs	В	Pass
2	With Interference Pulse = 35μs	В	Pass

- A Could be connected in at least one channel
- B Could not be connected in all channels
- NA Not applicable

Company: VTech Telecommunications Ltd. Model: TL7912

Date of Test: May 10 - June 14, 2012

4.23 Monitoring Antenna, FCC Rule 15.323(c)(8) / RSS-213 Clause 4.3.4(b)(8):

The monitoring system shall use the same antenna used for transmission, or an antenna that yields equivalent reception at that location.

- [x] EUT uses the same antenna used for transmission and monitoring that is in compliance meet above provision.
- [ ] EUT uses difference antenna used for transmission and monitoring. It must be verified that the monitoring antenna provides coverage equivalent to that of the transmitting antenna. Measurements are made in accordance with ANSI C63.17 sub-clause 4.

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.24 Duplex Connections, FCC 15.323(c)(10) / RSS-213 Clause 4.3.4(b)(10):

An initiating device may attempt to establish a duplex connection by monitoring both its intended transmit (Tx) and receive (Rx) time and spectrum windows. If both the intended transmit and receive time and spectrum windows meet the access criteria, then the initiating device can initiate a transmission in the intended transmit time and spectrum window. If the power detected by the responding device can be decoded as a duplex connection signal from the initiating device, then the responding device may immediately begin transmitting on the receive time and spectrum window monitored by the initiating device.

Measurements are made in accordance with ANSI C63.17 sub-clause 8.3. Test setup is shown in section 3.3 Figure 3.3.1.

Attestation:

[x] The Headset is the initiating device of the duplex connection

Test Results:

I a. Headset

[ ] Dual Access Criteria Check for EUT not Implemented the Upper Threshold:

Interference	Reaction of EUT	Results
All Tx and Rx Window, except one for Rx Window	NA	NA
All Tx and Rx Window, except one for Tx Window	NA	NA

Company: VTech Telecommunications Ltd. Model: TL7912

Date of Test: May 10 - June 14, 2012

- 4.24 Duplex Connections, FCC 15.323(c)(10) / RSS-213 Clause 4.3.4(b)(10): - Continued
- I b. Headset
- [x] Dual Access Criteria Check for EUT Implemented the Upper Threshold:

Interference	Reaction of EUT	Results
All Tx windows with level $T_L + U_M \& Rx$ windows with level $T_L + U_M + 7 dB$ , except one for Tx window & one for Rx window, which are not duplex.	А	Pass
All Tx windows with level $T_L + U_M + 7$ dB & Rx windows with level $T_L + U_M$ , except one for Tx window & one for Rx, which are not duplex	В	Pass
All Tx & Rx windows with level $T_U + U_M$ , except one for Tx window & one for Rx Window, which are not duplex	D	Pass

- A Could be connected on the target Rx window and its duplex mate
- B Could be connected on the target Tx window and its duplex mate
- C Connected on window which is not the target Tx/Rx window
- D Could not be connected
- NA Not applicable

Company: VTech Telecommunications Ltd. Model: TL7912 Date of Test: May 10 - June 14, 2012

4.25 Alternative Monitoring Interval for Co-located Device, FCC Rule 15.323(c)(11) / RSS-213 Clause 4.3.4(b)(11):

An initiating device that is prevented from monitoring during its intended transmit window due to monitoring system blocking from the transmissions of a co-located (within one meter) transmitter of the same system, may monitor the portions of the time and spectrum windows in which they intend to receive over a period of at least 10 ms. The monitored time and spectrum window must total at least 50 % of the 10 ms frame interval and the monitored spectrum must be within the 1.25 MHz frequency channel(s) already occupied by that device or co-located co-operating devices. If the access criteria is met for the intended receive time and spectrum window under the above conditions, then transmission in the intended transmit window by the initiating device may commence.

Measurements are made in accordance with ANSI C63.17 sub-clause 8.4.

#### Attestation:

- [] Appropriate as it is co-located device, in which the monitoring system will be blocked from the transmissions of a co-located (Within one meter) transmitter of the same system. Please refer to attachment, 15.323(c)(11).pdf / RSS-213(b)(11).pdf, for details.
- [x] Not appropriate, as the system always monitor both the transmit and receive time/spectrum windows, it is not a co-located device.

Company: VTech Telecommunications Ltd. Model: TL7912

Date of Test: May 10 - June 14, 2012

4.26 Fair Access, FCC Rule 15.323(c)(12) / RSS-213 Clause 4.3.4(b)(12):

The provisions of FCC Rule 15.323(c)(10) or (c)(11) / RSS-213 Clause 4.3.4(b)(10) or (b)(11) shall not be used to extend the range of spectrum occupied over space or time for the purpose of denying fair access to spectrum to other devices.

Attestation:

The manufacturer declares that the device does not use any mechanisms as provided by Part 15.323(c)(10) or (c)(11) / RSS-213 Clause 4.3.4(b)(10) or (b)(11) to extend the range of spectrum occupied over space or time for the purpose of denying fair access to spectrum to other devices.

Please refer to the declaration letter (declaration.pdf).

#### 5.0 Equipment List

#### 1) Radiated Emissions Test

·						
Equipment	EMI Test Receiver	Spectrum Analyzer	Log Periodic Antenna			
Registration No.	EW-2500	EW-2188	EW-0446			
Manufacturer	ROHDESCHWARZ	AGILENTTECH	EMCO			
Model No.	ESCI	E4407B	3146			
Calibration Date	Feb. 24, 2012	Sep. 26, 2011	Oct. 31, 2011			
Calibration Due	Feb. 24, 2013	Sep. 26, 2012	Apr. 30, 2013			
Date						
Equipment	Broad-Band Horn Antenna	Biconical Antenna 20MHz to 200MHz	Double Ridged Guide Antenna (1GHz - 18GHz)			
Registration No.	EW-1679	EW-2512	EW-1133			
Manufacturer	SCHWARZBECK	EMCO	EMCO			
Model No.	BBHA9170	3104C	3115			
Calibration Date	Mar. 21, 2012	Nov. 15, 2011	Mar. 02, 2011			
Calibration Due Date	Mar. 21, 2013	May. 15, 2013	Sep .02, 2012			

#### 2) Conductive Measurement Test

Equipment	Coaxial directional	Spectrum Analyzer	Digital		
	coupler		Radiocommunication		
			Tester for DECT		
Registration No.	EW-2337	EW-2253	EW-1739		
Manufacturer	MAGNA	R&S	R&S		
Model No.	4222-16	FSP40	CMD60		
Calibration Date	Nil*	Jan.12, 2012	Jun. 29, 2011		
Calibration Due Date	Nil*	Jan.12, 2013	Jun. 29, 2012		
Equipment	Vector Signal	Temperature &	Digital Multimeter		
	Generator	Humidity Chamber	_		
Registration No.	EW-2320	EW-2134	EW-1017		
Manufacturer	R&S	GIANT FORCE	FLUKE		
Model No.	SMU200A	GTH-750-40-CP-SD	87-IV		
Calibration Date	Aug. 18, 2011	Sep. 02, 2011	Apr. 02, 2012		
Calibration Due Date	Aug. 18, 2012	Aug. 29, 2012	May. 01, 2013
