## GENERAL INFORMATION

Product Description for Equipment under Test (EUT)

| Product | SIP Cordless Hotel Telephone |
| :---: | :---: |
| Tested Model | CTM-S2415 |
| Multiple Model | CTM-S2425 |
| Model Differences | Refer to the DoS letter |
| HVIN | 35-400291BS |
| Frequency Range | 5 G Wi-Fi: $5150-5250 \mathrm{MHz}$; $5250-5350 \mathrm{MHz}$; $5470-5725 \mathrm{MHz}$; $5725-5850 \mathrm{MHz}$ |
| Maximum Conducted Average Ouput Power | $\begin{aligned} & \text { 5150-5250 MHz: } \\ & \text { 12.77dBm (802.11a), } 9.75 \mathrm{dBm}(802.11 \mathrm{n} 20), 8.77 \mathrm{dBm}(802.11 \mathrm{n} 40) \\ & 8.79 \mathrm{dBm}(802.11 \mathrm{ac} 20), 9.19 \mathrm{dBm}(802.11 \mathrm{ac} 40), 8.83 \mathrm{dBm}(802.11 \mathrm{ac} 80) \\ & 5250-5350 \mathrm{MHz}: \\ & 12.40 \mathrm{dBm}(802.11 \mathrm{a}), 9.36 \mathrm{dBm}(802.11 \mathrm{n} 20), 7.64 \mathrm{dBm}(802.11 \mathrm{n} 40) \\ & 8.39 \mathrm{dBm}(802.11 \mathrm{ac} 20), 8.73 \mathrm{dBm}(802.11 \mathrm{ac} 40), 8.51 \mathrm{dBm}(802.11 \mathrm{ac} 80) \\ & 5470-5725 \mathrm{MHz}: \\ & 12.78 \mathrm{dBm}(802.11 \mathrm{a}), 10.89 \mathrm{dBm}(802.11 \mathrm{n} 20), 10.70 \mathrm{dBm}(802.11 \mathrm{n} 40) \\ & 9.54 \mathrm{dBm}(802.11 \mathrm{ac} 20), 9.41 \mathrm{dBm}(802.11 \mathrm{ac} 40), 8.77 \mathrm{dBm}(802.11 \mathrm{ac} 80) \\ & 5725-5850 \mathrm{MHz}: \\ & 14.89 \mathrm{dBm}(802.11 \mathrm{a}), 13.07 \mathrm{dBm}(802.11 \mathrm{n} 20), 13.46 \mathrm{dBm}(802.11 \mathrm{n} 40) \\ & 11.75 \mathrm{dBm}(802.11 \mathrm{ac} 20), 12.12 \mathrm{dBm}(802.11 \mathrm{ac} 40), 10.95 \mathrm{dBm}(802.11 \mathrm{ac} 80) \\ & \hline \end{aligned}$ |
| Modulation Technique | OFDM |
| Antenna Specification | 2.0 dBi |
| Voltage Range | DC 5.0V from adapter or DC 48 V from POE |
| Date of Test | 2020-08-18 to 2020-10-12 |
| Sample serial number | RSZ200811006-RF-S1 (Assigned by BACL, Shenzhen) |
| Received date | 2020-08-11 |
| Sample/EUT Status | Good condition |
| Adapter information | Model:VT07EUS05200 Input: $100-240 \mathrm{~V} \sim 50 / 60 \mathrm{~Hz}, 0.5 \mathrm{~A}$ Output: DC $50 \mathrm{~V}, 20 \mathrm{~A}, 10.0 \mathrm{~W}$ <br> Output: DC $5.0 \mathrm{~V}, 2.0 \mathrm{~A}, 10.0 \mathrm{~W}$ |

## Objective

This test report is in accordance with Part 2-Subpart J, Part 15-Subparts A and E of the Federal Communication Commissions rules and RSS-GEN Issue 5, March 2019 Amendment 1 and RSS-247, Issue 2, February 2017 of the Innovation, Science and Economic Development Canada rules.

The tests were performed in order to determine compliance with FCC Part 15, Subpart E, section 15.203, $15.205,15.207,15.209$ and 15.407 rules.

## Test Methodology

All measurements contained in this report were conducted with ANSI C63.10-2013, RSS-GEN Issue 5, March 2019 Amendment 1 and RSS-247, Issue 2, February 2017. American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices. And KDB789033 D02 General U-NII Test Procedures New Rules v02r01.

All emissions measurement was performed at Bay Area Compliance Laboratories Corp. (Shenzhen). The radiated testing was performed at an antenna-to-EUT distance of 3 meters.

## Measurement Uncertainty

| Parameter |  | Uncertainty |
| :---: | :---: | :---: |
| Occupied Channel Bandwidth |  | $\pm 5 \%$ |
| RF Output Power with Power meter |  | $\pm 0.73 \mathrm{~dB}$ |
| RF conducted test with spectrum |  | $\pm 1.6 \mathrm{~dB}$ |
| AC Power Lines Conducted Emissions | $\pm 1.95 \mathrm{~dB}$ |  |
| Emissions, <br> Radiated |  | Below 1 GHz |
| Temperature |  | $\pm 4.75 \mathrm{~dB}$ |
| Humidity |  | $\pm 4.88 \mathrm{~dB}$ |
| Supply voltages |  | $\pm 1^{\circ} \mathrm{C}$ |
|  |  |  |

Note: The extended uncertainty given in this report is obtained by combining the standard uncertainty times the coverage factor $K$ with the $95 \%$ confidence interval.Otherwise required by the applicant or Product Regulations, Decision Rule in this report did not consider the uncertainty.

## Test Facility

The Test site used by Bay Area Compliance Laboratories Corp. (Shenzhen) to collect test data is located on the $6 /$ F., West Wing, Third Phase of Wanli Industrial Building, Shihua Road, Futian Free Trade Zone, Shenzhen, Guangdong, China.

The test site has been approved by the FCC under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database, FCC Registration No.: 342867, the FCC Designation No.: CN1221.

The lab has been recognized by Innovation, Science and Economic Development Canada to test to Canadian radio equipment requirements, the CAB identifier : CN0023.

## SYSTEM TEST CONFIGURATION

## Description of Test Configuration

The system was configured for testing in an engineering mode, which was provided by manufacturer.
The EUT can operate in $802.11 \mathrm{a} / \mathrm{n} 20 / \mathrm{n} 40 / \mathrm{ac} 20 / \mathrm{ac} 40 / \mathrm{ac} 80$ modes.
For $5150-5250 \mathrm{MHz}$ Band, 7 channels are provided to testing:

| Channel | Frequency <br> $(\mathbf{M H z})$ | Channel | Frequency <br> $\mathbf{( M H z )}$ |
| :---: | :---: | :---: | :---: |
| 36 | 5180 | 44 | 5220 |
| 38 | 5190 | 46 | 5230 |
| 40 | 5200 | 48 | 5240 |
| 42 | 5210 | $/$ | $/$ |

For $5250-5350 \mathrm{MHz}$ Band, 7 channels are provided to testing:

| Channel | Frequency <br> $(\mathbf{M H z})$ | Channel | Frequency <br> $(\mathbf{M H z})$ |
| :---: | :---: | :---: | :---: |
| 52 | 5260 | 60 | 5300 |
| 54 | 5270 | 62 | 5310 |
| 56 | 5280 | 64 | 5320 |
| 58 | 5290 | $/$ | $/$ |

For $5470-5725 \mathrm{MHz}$ Band, 18 channels are provided to testing:

| Channel | Frequency <br> (MHz) | Channel | Frequency <br> (MHz) |
| :---: | :---: | :---: | :---: |
| 100 | 5500 | 124 | 5620 |
| 102 | 5510 | 126 | 5630 |
| 104 | 5520 | 128 | 5640 |
| 106 | 5530 | 132 | 5660 |
| 108 | 5540 | 134 | 5670 |
| 110 | 5550 | 136 | 5680 |
| 112 | 5560 | 140 | 5700 |
| 116 | 5580 | $/$ | $/$ |
| 118 | 5590 | $/$ | $/$ |
| 120 | 5600 | $/$ | $/$ |
| 122 | 5610 | $/$ | $/$ |

Note: the channels within the $5600-5650 \mathrm{MHz}$ can't be used in ISEDC.

For $5725-5850 \mathrm{MHz}$ Band, 8 channels are provided to testing:

| Channel | Frequency <br> (MHz) | Channel | Frequency <br> $(\mathbf{M H z})$ |
| :---: | :---: | :---: | :---: |
| 149 | 5745 | 157 | 5785 |
| 151 | 5755 | 159 | 5795 |
| 153 | 5765 | 161 | 5805 |
| 155 | 5775 | 165 | 5825 |

## EUT Exercise Software

"SecureCRT" was used. Test frequencies and power level were configured as below:

| U-NII | Mode | Frequency (MHz) | Data Rate | Power Level |
| :---: | :---: | :---: | :---: | :---: |
| $5150-5250 \mathrm{MHz}$ | 802.11 a | 5180 | 6Mbps | 44 |
|  |  | 5200 | 6Mbps | 44 |
|  |  | 5240 | 6Mbps | 44 |
|  | 802.11 n20 | 5180 | MCS0 | 38 |
|  |  | 5200 | MCS0 | 38 |
|  |  | 5240 | MCS0 | 38 |

|  |  | 5230 | MCS0 | 38 |
|  | 802.11 ac20 | 5180 | MCS0 | 36 |
|  |  | 5200 | MCS0 | 36 |
|  |  | 5240 | MCS0 | 36 |
|  | 802.11 ac40 | 5190 | MCS0 | 36 |
|  |  | 5230 | MCS0 | 36 |
|  | 802.11 ac80 | 5210 | MCS0 | 36 |
| $5250-5350 \mathrm{MHz}$ | 802.11 a | 5260 | 6Mbps | 44 |
|  |  | 5280 | 6 Mbps | 44 |
|  |  | 5320 | 6Mbps | 44 |
|  | 802.11 n20 | 5260 | MCS0 | 38 |
|  |  | 5280 | MCS0 | 38 |
|  |  | 5320 | MCS0 | 38 |
|  | 802.11 n 40 | 5270 | MCS0 | 38 |
|  |  | 5310 | MCS0 | 38 |
|  | 802.11 ac20 | 5260 | MCS0 | 36 |
|  |  | 5280 | MCS0 | 36 |
|  |  | 5320 | MCS0 | 36 |
|  | 802.11 ac40 | 5270 | MCS0 | 36 |
|  |  | 5310 | MCS0 | 36 |
|  | 802.11 ac80 | 5290 | MCS0 | 36 |

| U-NII | Mode | Frequency (MHz) | Data Rate set | Power Level |
| :---: | :---: | :---: | :---: | :---: |
| $5470-5725 \mathrm{MHz}$ | 802.11 a | 5500 | 6Mbps | 46 |
|  |  | 5580 | 6Mbps | 46 |
|  |  | 5700 | 6Mbps | 46 |
|  | 802.11 n20 | 5500 | MCS0 | 41 |
|  |  | 5580 | MCS0 | 41 |
|  |  | 5700 | MCS0 | 41 |
|  | 802.11 n40 | 5510 | MCS0 | 41 |
|  |  | 5550 | MCS0 | 41 |
|  |  | 5670 | MCS0 | 41 |
|  | 802.11 ac 20 | 5500 | MCS0 | 39 |
|  |  | 5580 | MCS0 | 39 |
|  |  | 5700 | MCS0 | 39 |
|  | 802.11 ac40 | 5510 | MCS0 | 39 |
|  |  | 5550 | MCS0 | 39 |
|  |  | 5670 | MCS0 | 39 |
|  | 802.11 ac80 | 5530 | MCS0 | 39 |
|  |  | 5610 | MCS0 | 39 |
| $5725-5850 \mathrm{MHz}$ | 802.11 a | 5745 | 6Mbps | 48 |
|  |  | 5785 | 6 Mbps | 48 |
|  |  | 5825 | 6Mbps | 48 |
|  | 802.11 n20 | 5745 | MCS0 | 43 |
|  |  | 5785 | MCS0 | 43 |
|  |  | 5825 | MCS0 | 43 |
|  | 802.11 n40 | 5755 | MCS0 | 43 |
|  |  | 5795 | MCS0 | 43 |
|  | 802.11 ac20 | 5745 | MCS0 | 41 |
|  |  | 5785 | MCS0 | 41 |
|  |  | 5825 | MCS0 | 41 |
|  | 802.11 ac40 | 5755 | MCS0 | 41 |
|  |  | 5795 | MCS0 | 41 |
|  | 802.11 ac80 | 5775 | MCS0 | 41 |

The worse-case data rates are determined to be as follows for each mode based upon investigations by measuring the average power and PSD across all data rated bandwidths, and modulations.

Note: the channels within the $5600-5650 \mathrm{MHz}$ can't be used in ISEDC.

## Duty cycle

Test Result: Pass. Please refer to the Appendix.

## Equipment Modifications

No modification was made to the EUT tested.

## Support Equipment List and Details

| Manufacturer | Description | Model | Serial Number |
| :---: | :---: | :---: | :---: |
| BULL | Socket | GN-415K | 5503290068073 |

* Statement of Traceability: Bay Area Compliance Laboratories Corp. (Shenzhen) attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

## FCC §15.247 (i) \& §2.1091- MAXIMUM PERMISSIBLE EXPOSURE (MPE)

## Applicable Standard

According to subpart 15.247 (i) and subpart 2.1091 systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to RF energy level in excess of the communication guidelines.

Limits for General Population/Uncontrolled Exposure

| Limits for General Population/Uncontrolled Exposure |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency <br> Range <br> $(\mathbf{M H z})$ | Electric Field <br> Strength <br> $(\mathbf{V} / \mathbf{m})$ | Magnetic Field <br> Strength <br> $(\mathbf{A} / \mathbf{m})$ | Power <br> Density <br> $\left(\mathbf{m W} / \mathbf{c m}^{2}\right)$ | Averaging <br> Time <br> (Minutes) |  |
| $0.3-1.34$ | 614 | 1.63 | $*(100)$ | 30 |  |
| $1.34-30$ | $824 / \mathrm{f}$ | $2.19 / \mathrm{f}$ | $*\left(180 / \mathrm{f}^{2}\right)$ | 30 |  |
| $30-300$ | 27.5 | 0.073 | 0.2 | 30 |  |
| $300-1500$ | $/$ | $/$ | $\mathrm{f} / 1500$ | 30 |  |
| $1500-100,000$ | $/$ | $/$ | 1.0 | 30 |  |

$\mathrm{f}=$ frequency in MHz

* = Plane-wave equivalent power density

## Result

## Calculated Formulary:

Predication of MPE limit at a given distance

$$
\mathrm{S}=\frac{P G}{4 \pi R^{2}}
$$

$\mathrm{S}=$ power density (in appropriate units, e.g. $\mathrm{mW} / \mathrm{cm} 2$ )
$\mathrm{P}=$ power input to the antenna (in appropriate units, e.g., mW ).
$\mathrm{G}=$ power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain
factor, is normally numeric gain.
$\mathrm{R}=$ distance to the center of radiation of the antenna (appropriate units, e.g., cm )

For simultaneously transmit system, the calculated power density should comply with:

$$
\sum_{i} \frac{S_{i}}{S_{\text {Limit }, i}} \leq 1
$$

| Frequency (MHz) | Antenna Gain |  | Tune up conducted power |  | Evaluation Distance (cm) | $\begin{gathered} \text { Power } \\ \text { Density } \\ \left(\mathrm{mW} / \mathrm{cm}^{2}\right) \end{gathered}$ | MPE Limit ( $\mathrm{mW} / \mathrm{cm}^{2}$ ) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (dBi) | (numeric) | (dBm) | (mW) |  |  |  |
| 2412-2462 | 1 | 1.26 | 19.0 | 79.43 | 20 | 0.02 | 1 |
| 5150-5250 | 2 | 1.58 | 13.0 | 19.95 | 20 | 0.006 | 1 |
| 5250-5350 | 2 | 1.58 | 13.0 | 19.95 | 20 | 0.006 | 1 |
| 5470-5725 | 2 | 1.58 | 13.0 | 19.95 | 20 | 0.006 | 1 |
| 5725-5850 | 2 | 1.58 | 15.0 | 31.62 | 20 | 0.010 | 1 |
| $\begin{gathered} \hline 1921.536 \\ - \\ 1928.448 \end{gathered}$ | 0 | 1.0 | 20 | 100 | 20 | 0.02 | 1 |

Note: 1. The tune up conducted power was declared by the applicant
2. The 2.4 G Wi -Fi can't transmit at the same time with the $5 \mathrm{G} \mathrm{Wi}-\mathrm{Fi}$.
3. The 2.4 G Wi-Fi or 5 G Wi -Fi can transmit with DECT function at the same time.

Simultaneous transmitting consideration (worst case):
The ratio $=\mathrm{MPE}_{2.4 \mathrm{G} \text { Wi-Fi }} / \mathrm{limit}+\mathrm{MPE}_{\mathrm{DECT}} /$ limit $=0.02+0.02=0.04<1.0$, so simultaneous exposure is not required.

To maintain compliance with the FCC's RF exposure guidelines, place the equipment at least 20 cm from nearby persons.

## Result: Pass

## RSS-102 § 4 -EXPOSURE LIMITS

## Applicable Standard

According to RSS-102 §4:
Table 4: RF Field Strength Limits for Devices Used by the General Public (Uncontrolled Environment)

| Frequency Range (MHz) | Electric Field (V/m rms) | Magnetic Field <br> (A/m rms) | Power Density (W/m²) | Reference Period (minutes) |
| :---: | :---: | :---: | :---: | :---: |
| $0.003-10 \underline{21}$ | 83 | 90 | - | Instantaneous* |
| 0.1-10 | - | $0.73 / f$ | - | $6^{* *}$ |
| 1.1-10 | 87/ $f^{0.5}$ | - | - | $6^{* *}$ |
| 10-20 | 27.46 | 0.0728 | -2 | 6 |
| 20-48 | $58.07 / f^{0.25}$ | $0.1540 / f^{0.25}$ | $8.944 / f^{0.5}$ | 6 |
| 48-300 | 22.06 | 0.05852 | 1.291 | 6 |
| 300-6000 | $3.142 f^{0.3417}$ | $0.008335 f^{0.3417}$ | $0.02619 f^{0.6834}$ | 6 |
| 6000-15000 | 61.4 | 0.163 | 10 | 6 |
| 15000-150000 | 61.4 | 0.163 | 10 | 616000/f ${ }^{1.2}$ |
| 150000-300000 | $0.158 f^{0.5}$ | $4.21 \times 10^{-4} f^{0.5}$ | $6.67 \times 10^{-5} \mathrm{f}$ | $616000 / f^{1.2}$ |
| Note: $f$ is frequency in MHz Based on nerve stimulation (NS). Based on specific absorption rate (SAR). |  |  |  |  |

## Calculated Formulary:

Predication of MPE limit at a given distance

$$
\mathrm{S}=\frac{P G}{4 \pi R^{2}}
$$

$\mathrm{S}=$ power density (in appropriate units, e.g. $\mathrm{mW} / \mathrm{cm} 2$ )
$\mathrm{P}=$ power input to the antenna (in appropriate units, e.g., mW ).
$\mathrm{G}=$ power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain.
$\mathrm{R}=$ distance to the center of radiation of the antenna (appropriate units, e.g., cm )

For simultaneously transmit system, the calculated power density should comply with:

$$
\sum_{i} \frac{S_{i}}{S_{\text {Limit }, i}} \leq 1
$$

| Frequency <br> (MHz) | Antenna Gain |  | Turn up Power |  | Evaluation Distance (m) | Power Density (W/m ${ }^{2}$ ) | MPE Limit ( $\mathrm{W} / \mathrm{m}^{2}$ ) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (dBi) | (numeric) | (dBm) | (W) |  |  |  |
| 2412-2462 | 1 | 1.26 | 19.0 | 0.079 | 0.2 | 0.2 | 5.37 |
| 5150-5250 | 2 | 1.58 | 13.0 | 0.020 | 0.2 | 0.06 | 9.01 |
| 5250-5350 | 2 | 1.58 | 13.0 | 0.020 | 0.2 | 0.06 | 9.13 |
| 5470-5725 | 2 | 1.58 | 13.0 | 0.020 | 0.2 | 0.06 | 9.39 |
| 5725-5850 | 2 | 1.58 | 15.0 | 0.032 | 0.2 | 0.10 | 9.69 |
| $\begin{gathered} \hline 1921.536 \\ - \\ 1928.448 \\ \hline \end{gathered}$ | 0 | 1.0 | 20 | 0.1 | 0.2 | 0.2 | 4.59 |

Note: 1. The tune up conducted power was declared by the applicant
2. The 2.4 G Wi-Fi can't transmit at the same time with the 5 G Wi-Fi.
3. The 2.4 G Wi-Fi or 5 G Wi-Fi can transmit with DECT function at the same time.

Simultaneous transmitting consideration (worst case):
The ratio $=\mathrm{MPE}_{2.4 \mathrm{G} \text { Wi-Fi }} / \mathrm{limit}+\mathrm{MPE}_{\mathrm{DECT}} / \mathrm{limit}=0.2 / 5.37+0.2 / 4.59=0.08<1.0$, so simultaneous exposure is not required.

To maintain compliance with the ISEDC's RF exposure guidelines, place the equipment at least 20 cm from nearby persons.

## Result: Pass

## FCC §15.203 \& RSS-GEN §6.8- ANTENNA REQUIREMENT

## Applicable Standard

According to $\S 15.203$, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the user of a standard antenna jack or electrical connector is prohibited. The structure and application of the EUT were analyzed to determine compliance with section $\S 15.203$ of the rules. $\S 15.203$ state that the subject device must meet the following criteria: a. Antenna must be permanently attached to the unit.
b. Antenna must use a unique type of connector to attach to the EUT.

Unit must be professionally installed, and installer shall be responsible for verifying that the correct antenna is employed with the unit.
And according to FCC 47 CFR section 15.407 (a), if the transmitting antennas of directional gain greater than 6 dBi are used, the transmit power and power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi .

The applicant for equipment certification shall provide a list of all antenna types that may be used with the transmitter, where applicable (i.e. for transmitters with detachable antenna), indicating the maximum permissible antenna gain (in dBi ) and the required impedance for each antenna. The test report shall demonstrate the compliance of the transmitter with the limit for maximum equivalent isotropically radiated power (e.i.r.p.) specified in the applicable RSS, when the transmitter is equipped with any antenna type, selected from this list.

For expediting the testing, measurements may be performed using only the antenna with highest gain of each combination of transmitter and antenna type, with the transmitter output power set at the maximum level. However, the transmitter shall comply with the applicable requirements under all operational conditions and when in combination with any type of antenna from the list provided in the test report (and in the notice to be included in the user manual, provided below).

When measurements at the antenna port are used to determine the RF output power, the effective gain of the device's antenna shall be stated, based on a measurement or on data from the antenna's manufacturer.

The test report shall state the RF power, output power setting and spurious emission measurements with each antenna type that is used with the transmitter being tested.

For licence-exempt equipment with detachable antennas, the user manual shall also contain the following notice in a conspicuous location:

This radio transmitter [enter the device's ISED certification number] has been approved by Innovation, Science and Economic Development Canada to operate with the antenna types listed below, with the maximum permissible gain indicated. Antenna types not included in this list that have a gain greater than the maximum gain indicated for any type listed are strictly prohibited for use with this device. Immediately following the above notice, the manufacturer shall provide a list of all antenna types which can be used with the transmitter, indicating the maximum permissible antenna gain (in dBi ) and the required impedance for each antenna type.

## Antenna Connector Construction

The EUT has one internal antenna arrangement for 5 GWi Fi , which was permanently attached and the antenna gain is 2.0 dBi , fulfill the requirement of this section. Please refer to the EUT photos.

| Type | Antenna Gain | Impedance |
| :---: | :---: | :---: |
| PCB | 2.0 dBi | $50 \Omega$ |

## Result: Pass

## § 15.407(b)(6)\& §15.207(a) \& RSS-Gen §8.8 CONDUCTED EMISSIONS

## Applicable Standard

FCC §15.207, §15.407(b) (6)
Unless stated otherwise in the applicable RSS, for radio apparatus that are designed to be connected to the public utility AC power network, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the range 150 kHz to 30 MHz shall not exceed the limits in table 4 , as measured using a $50 \mu \mathrm{H} / 50 \Omega$ line impedance stabilization network. This requirement applies for the radio frequency voltage measured between each power line and the ground terminal of each AC power-line mains cable of the EUT.

For an EUT that connects to the AC power lines indirectly, through another device, the requirement for compliance with the limits in table 4 shall apply at the terminals of the AC power-line mains cable of a representative support device, while it provides power to the EUT. The lower limit applies at the boundary between the frequency ranges. The device used to power the EUT shall be representative of typical applications.

| Table 4-AC Power Lines Conducted Emission Limits |  |  |
| :---: | :---: | :---: |
| Frequency range <br> (MHz) | Conducted limit (dB $\boldsymbol{\mu} \mathbf{V}$ ) |  |
|  | Quasi-Peak | Average |
| $0.15-0.5$ | 66 to $56^{\mathbf{1}}$ | 56 to $46^{\mathbf{1}}$ |
| $0.5-5$ | 56 | 46 |
| $5-30$ | 60 | 50 |

Note 1: The level decreases linearly with the logarithm of the frequency.
For an EUT with a permanent or detachable antenna operating between 150 kHz and 30 MHz , the AC power-line conducted emissions must be measured using the following configurations:
(a) Perform the AC power-line conducted emissions test with the antenna connected to determine compliance with the limits of table 4 outside the transmitter's fundamental emission band.
(b) Retest with a dummy load instead of the antenna to determine compliance with the limits of table 4 within the transmitter's fundamental emission band. For a detachable antenna, remove the antenna and connect a suitable dummy load to the antenna connector. For a permanent antenna, remove the antenna and terminate the RF output with a dummy load or network that simulates the antenna in the fundamental frequency band.

## EUT Setup

Note: 1. Support units were connected to second LISN.
2. Both of LISNs (AMN) 80 cm from EUT and at the least 80 cm from other units and other metal plames support units.

The setup of EUT is according with per ANSI C63.10-2013 measurement procedure. The specification used was with the FCC Part 15.207 \& RSS 247 limits.

The spacing between the peripherals was 10 cm .
The external I/O cables were draped along the test table and formed a bundle 30 to 40 cm long in the middle.

## EMI Test Receiver Setup

The EMI test receiver was set to investigate the spectrum from 150 kHz to 30 MHz .
During the conducted emission test, the EMI test receiver was set with the following configurations:

| Frequency Range | IF B/W |
| :---: | :---: |
| $150 \mathrm{kHz}-30 \mathrm{MHz}$ | 9 kHz |

## Test Procedure

During the conducted emission test, the adapter was connected to the LISN.
Maximizing procedure was performed on the six (6) highest emissions of the EUT.
All data was recorded in the Quasi-peak and average detection mode.

## Test Data

Environmental Conditions

| Temperature: | $25^{\circ} \mathrm{C}$ |
| ---: | :---: |
| Relative Humidity: | $65 \%$ |
| ATM Pressure: | 101.0 kPa |

The testing was performed by Haiguo Li on 2020-08-19.
EUT operation mode: Transmitting

## § 15.205\& §15.209\&§15.407(b) (1), (2), (3), (4), (6) (7) \& RSS-GEN

§8.10\&RSS-247§6.2 UNDESIRABLE EMISSION

## Applicable Standard

FCC §15.407 (b) (1), (2), (3), (4), (6), (7); §15.209; §15.205;
(b) Undesirable emission limits. Except as shown in paragraph (b)(7) of this section, the maximum emissions outside of the frequency bands of operation shall be attenuated in accordance with the following limits:
(1) For transmitters operating in the 5.15-5.25 GHz band: All emissions outside of the 5.15-5.35 GHz band shall not exceed an e.i.r.p. of $-27 \mathrm{dBm} / \mathrm{MHz}$.
(2) For transmitters operating in the $5.25-5.35 \mathrm{GHz}$ band: All emissions outside of the $5.15-5.35 \mathrm{GHz}$ band shall not exceed an e.i.r.p. of $-27 \mathrm{dBm} / \mathrm{MHz}$.
(3) For transmitters operating in the $5.47-5.725 \mathrm{GHz}$ band: All emissions outside of the $5.47-5.725 \mathrm{GHz}$ band shall not exceed an e.i.r.p. of $-27 \mathrm{dBm} / \mathrm{MHz}$.
(4) For transmitters operating in the $5.725-5.85 \mathrm{GHz}$ band:
(i) All emissions shall be limited to a level of $-27 \mathrm{dBm} / \mathrm{MHz}$ at 75 MHz or more above or below the band edge increasing linearly to $10 \mathrm{dBm} / \mathrm{MHz}$ at 25 MHz above or below the band edge, and from 25 MHz above or below the band edge increasing linearly to a level of $15.6 \mathrm{dBm} / \mathrm{MHz}$ at 5 MHz above or below the band edge, and from 5 MHz above or below the band edge increasing linearly to a level of $27 \mathrm{dBm} / \mathrm{MHz}$ at the band edge.

Unwanted emissions below 1 GHz must comply with the general field strength limits set forth in $\S 15.209$.

## According to RSS-247§6.2

## Frequency band 5150-5250 MHz

### 6.2.1.2 Unwanted emission limits

For transmitters with operating frequencies in the band $5150-5250 \mathrm{MHz}$, all emissions outside the band $5150-5350 \mathrm{MHzshall}$ not exceed $-27 \mathrm{dBm} / \mathrm{MHz}$ e.i.r.p. Any unwanted emissions that fall into the band $5250-5350 \mathrm{MHz}$ shall be attenuated below the channel power by at least 26 dB , when measured using a resolution bandwidth between 1 and $5 \%$ of the occupied bandwidth (i.e. $99 \%$ bandwidth), above 5250 MHz . The 26 dB bandwidth may fall into the $5250-5350 \mathrm{MHz}$ band; however, if the occupied bandwidth also falls within the $5250-5350 \mathrm{MHz}$ band, the transmission is considered as intentional and the devices shall comply with all requirements in the band $5250-5350 \mathrm{MHz}$ including implementing dynamic frequency selection (DFS) and TPC, on the portion of the emission that resides in the 5250-5350 MHz band.

## Frequency band $5250-5350 \mathrm{MHz}$

### 6.2.2 2 Unwanted emission limits

Devices shall comply with the following:
a.All emissions outside the band $5250-5350 \mathrm{MHz}$ shall not exceed $-27 \mathrm{dBm} / \mathrm{MHz}$ e.i.r.p.; or
b.All emissions outside the band $5150-5350 \mathrm{MHz}$ shall not exceed $-27 \mathrm{dBm} / \mathrm{MHz}$ e.i.r.p. and its power shall comply with the spectral power density for operation within the band $5150-5250 \mathrm{MHz}$. The device, except devices installed in vehicles, shall be labelled or include in the user manual the following text "for indoor use only."

## Frequency band $5470-5600 \mathrm{MHz}$ and $5650-5725 \mathrm{MHz}$

### 6.2.3.2 Unwanted emission limits

Emissions outside the band $5470-5725 \mathrm{MHz}$ shall not exceed $-27 \mathrm{dBm} / \mathrm{MHz}$ e.i.r.p. However, devices with bandwidth overlapping the band edge of 5725 MHz can meet the emission limit of $-27 \mathrm{dBm} / \mathrm{MHz}$ e.i.r.p.at 5850 MHz instead of 5725 MHz .

## Frequency band 5725-5850 $\mathbf{~ M H z}$

### 6.2.4.2 Unwanted emission limits

Devices operating in the band $5725-5850 \mathrm{MHz}$ with antenna gain greater than 10 dBi can have unwanted emissions that comply with either the limits in this section or in section 5.5 until six (6) months after the publication date of this standard for certification. Certified devices that do not comply with emission limits in this section shall not be manufactured, imported, distributed, leased, offered for sale or sold after April 1, 2018.

Devices operating in the band $5725-5850 \mathrm{MHz}$ with antenna gain of 10 dBi or less can have unwanted emissions that comply with either the limits in this section or in section 5.5 until April 1, 2018 for certification. Certified devices that do not comply with emission limits in this section shall not be manufactured, imported, distributed, leased, offered for sale or sold after April 1, 2020.

Devices operating in the band $5725-5850 \mathrm{MHz}$ shall have e.i.r.p. of unwanted emissions comply with the following:
a. $\quad 27 \mathrm{dBm} / \mathrm{MHz}$ at frequencies from the band edges decreasing linearly to $15.6 \mathrm{Bm} / \mathrm{MHz}$ at 5 MHz above or below the band edges;
b. $\quad 15.6 \mathrm{dBm} / \mathrm{MHz}$ at 5 MHz above or below the band edges decreasing linearly to 10 $\mathrm{dBm} / \mathrm{MHz}$ at 25 MHz above or below the band edges;
c. $10 \mathrm{dBm} / \mathrm{MHz}$ at 25 MHz above or below the band edges decreasing linearly to -27 $\mathrm{dBm} / \mathrm{MHz}$ at 75 MHz above or below the band edges; and
d. $-27 \mathrm{dBm} / \mathrm{MHz}$ at frequencies more than 75 MHz above or below the band edges.

## EUT Setup

Below 1 GHz:

## Above 1 GHz:

The setup of EUT is according with per ANSI C63.10-2013 measurement procedure. The specification used was with the FCC 15.209 and FCC $15.407 \&$ RSS-Gen\&RSS-247 limits.

The external I/O cables were draped along the test table and formed a bundle 30 to 40 cm long in the middle.

## EMI Test Receiver \& Spectrum Analyzer Setup

The system was investigated from 30 MHz to 40 GHz .
During the radiated emission test, the EMI test receiver \& Spectrum Analyzer Setup were set with the following configurations:

| Frequency Range | RBW | Video B/W | IF B/W | Measurement |
| :---: | :---: | :---: | :---: | :---: |
| $30 \mathrm{MHz}-1000 \mathrm{MHz}$ | 100 kHz | 300 kHz | 120 kHz | QP |
| Above 1 GHz | 1 MHz | 3 MHz | $/$ | PK |
|  | 1 MHz | $10 \mathrm{~Hz}^{\text {Note } 1}$ | $/$ | Average |
|  | 1 MHz | $>1 / \mathrm{T}^{\text {Note } 2}$ | $/$ | Average |

Note 1: when duty cycle is no less than $98 \%$
Note 2: when duty cycle is less than $98 \%$

## Test Procedure

## Radiated Spurious Emission

During the radiated emission test, the adapter was connected to the AC floor outlet.
Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all the installation combinations.

Data was recorded in Quasi-peak detection mode for frequency range of $30 \mathrm{MHz}-1 \mathrm{GHz}$, peak and Average detection modes for frequencies above 1 GHz .

According to ANSI C63.10-2013,9.4: For field strength measurements made at other than the distance at which the applicable limit is specified, extrapolate the measured field strength to the field strength at the distance specified by the limit using an inverse distance correction factor ( $20 \mathrm{~dB} /$ decade of distance). In some cases, a different distance correction factor may be required;

$$
E_{\text {SpecLimit }}=E_{\text {Meas }}+20 \log \left(\frac{d_{\text {Meas }}}{d_{\text {SpecLimit }}}\right)
$$

where

| $E_{\text {SpecLimit }}$ | is the field strength of the emission at the distance specified by the limit, in <br> $\mathrm{dB} \mu \mathrm{V} / \mathrm{m}$ |
| :--- | :--- |
| $E_{\text {Meas }}$ | is the field strength of the emission at the measurement distance, in $\mathrm{dB} \mu \mathrm{V} / \mathrm{m}$ |
| $d_{\text {Meas }}$ | is the measurement distance, in m |
| $d_{\text {SpecLimit }}$ | is the distance specified by the limit, in m |

So the extrapolation factor of 1 m is $20 * \log (1 / 3)=-9.5 \mathrm{~dB}$

## Corrected Amplitude \& Margin Calculation

The Corrected Amplitude is calculated by adding the Antenna Factor and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

$$
\text { Corrected Amplitude }=\text { Meter Reading }+ \text { Antenna Factor }+ \text { Cable Loss }- \text { Amplifier Gain }
$$

The "Margin" column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7 dB means the emission is 7 dB below the limit. The equation for margin calculation is as follows:

$$
\text { Margin }=\text { Limit }- \text { Corrected Amplitude }
$$

## Test Data

## Environmental Conditions

| Temperature: | $28 \sim 32.1^{\circ} \mathrm{C}$ |
| ---: | :---: |
| Relative Humidity: | $48 \sim 58 \%$ |
| ATM Pressure: | 101.0 kPa |

The testing was performed by Holland Yang from 2020-08-18 to 2020-09-24 for below 1GHz and by Leven Gan from 2020-08-28 to 2020-09-08 for above 1 GHz .

EUT operation mode: Transmitting

## Power by adapter:

30 MHz - $\mathbf{1 ~ G H z : ~ ( w o r s t ~ c a s e ~ i s ~ 8 0 2 . 1 1 a ~ m o d e ~} 5785 \mathrm{MHz}$ )

## Final Result

| Frequency (MHz) | QuasiPeak $(\mathrm{dB} \mu \mathrm{~V} / \mathrm{m})$ | $\begin{gathered} \operatorname{Limit}_{(\mathrm{dB} \mu \mathrm{~V} / \mathrm{m})} \end{gathered}$ | Margin (dB) | Height (cm) | Pol | Azimuth (deg) | Corr. <br> (dB) |

Note*: For ISEDC, all emissions outside the band $5150-5350 \mathrm{MHz}$ shall not exceed $-27 \mathrm{dBm} / \mathrm{MHz}$ e.i.r.p.and its power shall comply with the spectral power density for operation within the band $5150-5250 \mathrm{MHz}$. The spectral power density of $5150-5250 \mathrm{MHz}$ is $10 \mathrm{dBm} / \mathrm{MHz}$. So the emission limit is $(10+95.2+9.5) \mathrm{dBuV} / \mathrm{m}=114.7 \mathrm{dBuV} / \mathrm{m}$

## FCC §15.407(1), (5),(e) - 26 dB \& 6dB \& RSS-GEN § 6.7 \& RSS-247 §6.299\% EMISSION BANDWIDTH

## Applicable Standard

The maximum power spectral density is measured as a conducted emission by direct connection of a calibrated test instrument to the equipment under test. If the device cannot be connected directly, alternative techniques acceptable to the Commission may be used. Measurements in the $5.725-5.85 \mathrm{GHz}$ band are made over a reference bandwidth of 500 kHz or the 26 dB emission bandwidth of the device, whichever is less. Measurements in the $5.15-5.25 \mathrm{GHz}, 5.25-5.35 \mathrm{GHz}$, and the $5.47-5.725 \mathrm{GHz}$ bands are made over a bandwidth of 1 MHz or the 26 dB emission bandwidth of the device, whichever is less. A narrower resolution bandwidth can be used, provided that the measured power is integrated over the full reference bandwidth.

Within the $5.725-5.85 \mathrm{GHz}$ band, the minimum 6 dB bandwidth of U-NII devices shall be at least 500 kHz .
According to RSS-GEN § 6.7 \& RSS-247 §6.2.

## Test Procedure

## 1. Emission Bandwidth (EBW)

a) Set $\mathrm{RBW}=$ approximately $1 \%$ of the emission bandwidth.
b) Set the VBW > RBW.
c) Detector $=$ Peak.
d) Trace mode = max hold.
e) Measure the maximum width of the emission that is 26 dB down from the maximum of the emission. Compare this with the RBW setting of the analyzer. Readjust RBW and repeat measurement as needed until the RBW/EBW ratio is approximately $1 \%$.

## 2. Minimum Emission Bandwidth for the band 5.725-5.85 GHz

Section 15.407(e) specifies the minimum 6 dB emission bandwidth of at least 500 KHz for the band 5.7255.85 GHz . The following procedure shall be used for measuring this bandwidth:
a) Set RBW $=100 \mathrm{kHz}$.
b) Set the video bandwidth (VBW) $\geq 3 \times$ RBW.
c) Detector $=$ Peak.
d) Trace mode $=$ max hold .
e) Sweep = auto couple.
f) Allow the trace to stabilize.
g) Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

According to KDB 789033 D02 General UNII Test Procedures New Rules v02r01.

## Test Data

## Environmental Conditions

| Temperature: | $25^{\circ} \mathrm{C}$ |
| ---: | :---: |
| Relative Humidity: | $52 \%$ |
| ATM Pressure: | 101.0 kPa |

The testing was performed by Gavin Guo from 2020-08-30 to 2020-10-12.
EUT operation mode: Transmitting

## Test Result: Pass

Please refer to the Appendix.

# FCC §15.407(a)(1)(2)(3) \& RSS-247 §6.2- CONDUCTED TRANSMITTER OUTPUT POWER 

## Applicable Standard

For client devices in the $5.15-5.25 \mathrm{GHz}$ band, the maximum conducted output power over the frequency band of operation shall not exceed 250 mW provided the maximum antenna gain does not exceed 6 dBi . In addition, the maximum power spectral density shall not exceed 11 dBm in any 1 megahertz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi .

For the $5.25-5.35 \mathrm{GHz}$ and $5.47-5.725 \mathrm{GHz}$ bands, the maximum conducted output power over the frequency bands of operation shall not exceed the lesser of 250 mW or $11 \mathrm{dBm}+10 \log \mathrm{~B}$, where B is the 26 dB emission bandwidth in megahertz. In addition, the maximum power spectral density shall not exceed 11 dBm in any 1 megahertz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi .

For the band $5.725-5.85 \mathrm{GHz}$, the maximum conducted output power over the frequency band of operation shall not exceed 1 W . In addition, the maximum power spectral density shall not exceed 30 dBm in any $500-\mathrm{kHz}$ band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi . However, fixed point-to-point U-NII devices operating in this band may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter conducted power. Fixed, point-to-point operations exclude the use of point-to-multipoint systems, omnidirectional applications, and multiple collocated transmitters transmitting the same information. The operator of the U-NII device, or if the equipment is professionally installed, the installer, is responsible for ensuring that systems employing high gain directional antennas are used exclusively for fixed, point-to-point operations.

According to RSS-247 §6.2:
Frequency band 5250-5350 MHz
6.2.2.1(a) The maximum conducted output power shall not exceed 250 mW or $11+10 \log 10 \mathrm{~B}, \mathrm{dBm}$, whichever is less. The power spectral density shall not exceed 11 dBm in any 1.0 MHz band;

Frequency band $5470-5600 \mathrm{MHz}$ and $5650-5725 \mathrm{MHz}$
6.2.3.1 The maximum conducted output power shall not exceed 250 mW or $11+10 \log 10 \mathrm{~B}, \mathrm{dBm}$, whichever is less. The power spectral density shall not exceed 11 dBm in any 1.0 MHz band.

## Frequency band 5725-5850 MHz

6.2.4.1 For equipment operating in the band $5725-5850 \mathrm{MHz}$, the minimum 6 dB bandwidth shall be at least 500 kHz .

The maximum conducted output power shall not exceed 1 W . The output power spectral density shall not exceed 30 dBm in any 500 kHz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the output power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi . However, fixed point-topoint devices operating in this band may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter conducted power. Fixed point-to-point operations exclude the use of point-to-multipointFootnote3 systems, omnidirectional applications and multiple collocated transmitters transmitting the same information.

## Test Procedure

1. Place the EUT on a bench and set it in transmitting mode.
2. Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to one test equipment.
3. Add a correction factor to the display.

According to KDB 789033 D02 General UNII Test Procedures New Rules v02r01.

## FCC §15.407(a) (1) (2) (3) \& RSS-247 §6.2- POWER SPECTRAL DENSITY

## Applicable Standard

For client devices in the $5.15-5.25 \mathrm{GHz}$ band, the maximum conducted output power over the frequency band of operation shall not exceed 250 mW provided the maximum antenna gain does not exceed 6 dBi . In addition, the maximum power spectral density shall not exceed 11 dBm in any 1 megahertz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi .

For the $5.25-5.35 \mathrm{GHz}$ and $5.47-5.725 \mathrm{GHz}$ bands, the maximum conducted output power over the frequency bands of operation shall not exceed the lesser of 250 mW or $11 \mathrm{dBm}+10 \log \mathrm{~B}$, where B is the 26 dB emission bandwidth in megahertz. In addition, the maximum power spectral density shall not exceed 11 dBm in any 1 megahertz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi .

For the band $5.725-5.85 \mathrm{GHz}$, the maximum conducted output power over the frequency band of operation shall not exceed 1 W . In addition, the maximum power spectral density shall not exceed 30 dBm in any $500-\mathrm{kHz}$ band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi . However, fixed point-to-point U-NII devices operating in this band may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter conducted power. Fixed, point-to-point operations exclude the use of point-to-multipoint systems, omnidirectional applications, and multiple collocated transmitters transmitting the same information. The operator of the U-NII device, or if the equipment is professionally installed, the installer, is responsible for ensuring that systems employing high gain directional antennas are used exclusively for fixed, point-to-point operations.

## According to RSS-247 §6.2:

## Frequency band 5250-5350 MHz

6.2.2.1(a) The maximum conducted output power shall not exceed 250 mW or $11+10 \log 10 \mathrm{~B}, \mathrm{dBm}$, whichever is less. The power spectral density shall not exceed 11 dBm in any 1.0 MHz band;

Frequency band $5470-5600 \mathrm{MHz}$ and $5650-5725 \mathrm{MHz}$
6.2.3.1 The maximum conducted output power shall not exceed 250 mW or $11+10 \log 10 \mathrm{~B}, \mathrm{dBm}$, whichever is less. The power spectral density shall not exceed 11 dBm in any 1.0 MHz band.

## Frequency band $\mathbf{5 7 2 5 - 5 8 5 0} \mathbf{~ M H z}$

6.2.4.1 For equipment operating in the band $5725-5850 \mathrm{MHz}$, the minimum 6 dB bandwidth shall be at least 500 kHz .

The maximum conducted output power shall not exceed 1 W . The output power spectral density shall not exceed 30 dBm in any 500 kHz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the output power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi . However, fixed point-topoint devices operating in this band may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter conducted power. Fixed point-to-point operations exclude the use of point-to-multipointFootnote3 systems, omnidirectional applications and multiple collocated transmitters transmitting the same information.

## Test Procedure

For devices operating in the bands $5.15-5.25 \mathrm{GHz}, 5.25-5.35 \mathrm{GHz}$, and $5.47-5.725 \mathrm{GHz}$, the above procedures make use of 1 MHz RBW to satisfy directly the 1 MHz reference bandwidth specified in § 15.407(a)(5). For devices operating in the band $5.725-5.85 \mathrm{GHz}$, the rules specify a measurement bandwidth of 500 kHz . Many spectrum analyzers do not have 500 kHz RBW, thus a narrower RBW may need to be used. The rules permit the use of a RBWs less than 1 MHz , or 500 kHz , "provided that the measured power is integrated over the full reference bandwidth" to show the total power over the specified measurement bandwidth (i.e., 1 MHz , or 500 kHz ). If measurements are performed using a reduced resolution bandwidth ( $<1 \mathrm{MHz}$, or $<500 \mathrm{kHz}$ ) and integrated over 1 MHz , or 500 kHz bandwidth, the following adjustments to the procedures apply:
a) Set $\mathrm{RBW} \geq 1 / \mathrm{T}$, where T is defined in section II.B.l.a).
b) Set VBW $\geq 3$ RBW.
c) If measurement bandwidth of Maximum PSD is specified in 500 kHz , add $10 \log$ ( 500
$\mathrm{kHz} / \mathrm{RBW}$ ) to the measured result, whereas RBW ( $<500 \mathrm{kHz}$ ) is the reduced resolution bandwidth of the spectrum analyzer set during measurement.
d) If measurement bandwidth of Maximum PSD is specified in 1 MHz , add $10 \log (1 \mathrm{MHz} / \mathrm{RBW})$ to the measured result, whereas RBW ( $<1 \mathrm{MHz}$ ) is the reduced resolution bandwidth of spectrum analyzer set during measurement.
e) Care must be taken to ensure that the measurements are performed during a period of continuous transmission or are corrected upward for duty cycle.

According to KDB 789033 D02 General UNII Test Procedures New Rules v02r01.

## Test Data

## Environmental Conditions

| Temperature: | $25^{\circ} \mathrm{C}$ |
| ---: | :---: |
| Relative Humidity: | $52 \%$ |
| ATM Pressure: | 101.0 kPa |

The testing was performed by Gavin Guo from 2020-08-30 to 2020-10-12.

## EUT operation mode: Transmitting

Test Result: Pass
Please refer to the Appendix.

## RSS-247 §6.4 - ADDITIONAL REQUIREMENTS

## Applicable Standard

According to RSS-247 Clause 6.4 Additional requirement
The following requirements shall apply:
a. The device shall automatically discontinue transmission in cases of absence of information to transmit, or operational failure. A description on how this is done shall accompany the application for equipment certification. Note that this is not intended to prohibit transmission of control or signalling information or the use of repetitive codes where required by the technology.
b. All LE-LAN devices must contain security features to protect against modification of software by unauthorized parties.

Manufacturers must implement security features in any digitally modulated devices capable of operating in any of the frequency ranges within the 5 GHz band, so that third parties are not able to reprogram the device to operate outside the parameters for which the device was certified. The software must prevent the user from operating the transmitter with operating frequencies, output power, modulation types or other radio frequency parameters outside those that were approved for the device. Manufacturers may use various means, including the use of a private network that allows only authenticated users to download software, electronic signatures in software or coding in hardware that is decoded by software to verify that new software can be legally loaded into a device to meet these requirements and must describe the methods in their application for equipment certification.

Manufacturers must take steps to ensure that DFS functionality cannot be disabled by the operator of the LE-LAN device.
c. The user manual for LE-LAN devices shall contain instructions related to the restrictions mentioned in the above sections, namely that:
i. the device for operation in the band $5150-5250 \mathrm{MHz}$ is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems; ${ }^{\text {Footnote4 }}$
ii. for devices with detachable antenna(s), the maximum antenna gain permitted for devices in the bands $5250-5350 \mathrm{MHz}$ and $5470-5725 \mathrm{MHz}$ shall be such that the equipment still complies with the e.i.r.p. limit;
iii. for devices with detachable antenna(s), the maximum antenna gain permitted for devices in the band $5725-5850 \mathrm{MHz}$ shall be such that the equipment still complies with the e.i.r.p. limits as appropriate; and
iv. where applicable, antenna type(s), antenna models(s), and worst-case tilt angle(s) necessary to remain compliant with the e.i.r.p. elevation mask requirement set forth in section 6.2 .2 .3 shall be clearly indicated.

## Result

## Pass

RSS-247 Clause 6.4 a):
The device shall automatically discontinue transmission in cases of absence of information to transmit, or operation failure. Please refer to declaration.

RSS-247 Clause 6.4 b):
The device must contain security features to protect against modification of software by unauthorized parties. Please refer to declaration.

RSS-247 Clause 6.4 c ):

1. the device for operation in the band $5150-5250 \mathrm{MHz}$ is only for indoor.
2. the device has one integral antennas for bands $5250-5350 \mathrm{MHz}$ and $5470-5725 \mathrm{MHz}$.
3. the device has one integral antennas for band $5725-5850 \mathrm{MHz}$.
4. For band $5250-5350 \mathrm{MHz}$, the maximum e.i.r.p. of the device is $14.40 \mathrm{dBm}=27.54 \mathrm{~mW}<200 \mathrm{~mW}$.
